CONTENTS

Chapter 1 Introduction

1.1 Differential equations 2
1.2 Classification of differential equations 8
1.3 Difference equations 11

Chapter 2 First Order Equations

2.1 Direct methods 20
2.2 Substitution techniques 27
2.3 Linear equations 32
2.4 Some special nonlinear equations 37
2.5 Exact equations 41
2.6 Linear first order difference equations 46
2.7 An application of first order difference equations: Newton's method 51
2.8 Simple electric circuits 56
2.9 Curves of pursuit 59
2.10 Compartmental analysis 64

Chapter 3 Linear Second Order Differential Equations

3.1 Introduction 72
3.2 Properties of solutions to the linear equation 73
3.3 Using one solution to find another 79

3.4 Homogeneous equations with constant coefficients: The case of real roots 82
3.5 Homogeneous equations with constant coefficients: Complex roots 85
3.6 Nonhomogeneous equations: The method of undetermined coefficients 88
3.7 Nonhomogeneous equations: Variations of constants 93
3.8 Variable coefficients: The Euler equation 97
3.9 Vibratory motion 100
3.10 Electric circuits 107
3.11 Compartmental analysis II 110
3.12 Higher order linear equations 115

Chapter 4 **Linear Second Order Difference Equations**

4.1 Introduction 128
4.2 Properties of solutions to the linear equation 129
4.3 Using one solution to find another 134
4.4 Homogeneous equations with constant coefficients: The case of real roots 136
4.5 Homogeneous equations with constant coefficients: The complex case 140
4.6 Nonhomogeneous equations: Variation of constants 143
4.7 Electrical networks 148
4.8 An application to games and quality control 154

Chapter 5 **Power Series Solutions of Differential Equations**

5.1 Review of power series 160
5.2 The power series method: Examples 167
5.3 Ordinary and singular points 175
5.4 Bessel functions 192
5.5 Legendre polynomials 205

Chapter 6 **Laplace Transforms**

6.1 Introduction: Definition and basic properties of the Laplace transform 214
6.2 Shifting theorems and Laplace transforms of derivatives and integrals 221
6.3 Transforming ordinary differential equations 233
6.4 The transform of convolution integrals 243
6.5 Laplace transform methods for difference equations 248

Chapter 7 **Elementary Systems of Differential Equations**

7.1 Introduction 256
7.2 The transformation of higher order equations to first order systems 262
7.3 The method of elimination for linear systems with constant coefficients 266
7.4 Linear systems: Theory 270
7.5 The solution of homogeneous linear equations with constant coefficients: The method of determinants 275
7.6 Electric circuits with several loops 284
7.7 Systems of nonlinear differential equations 288
7.8 Laplace transform methods for systems 293
7.9 Systems of linear difference equations 295
7.10 Matrices and systems of linear first order equations 301
7.11 Fundamental sets and fundamental matrix solutions of a homogeneous system of differential equations 309
7.12 Nonhomogeneous systems 323
7.13 An application of nonhomogeneous systems: Forced oscillations 329

Chapter 8 **Numerical Methods**

8.1 First order equations 338
8.2 An error analysis for Euler's method 346
8.3 Runge-Kutta formulas 351
8.4 Predictor-corrector formulas 354
8.5 The propagation of round-off error: An example of numerical instability 358
8.6 Systems and boundary value problems 361

Chapter 9 **Fourier Series and Boundary Value Problems**

9.1 Introduction 370
9.2 Orthogonal sets of functions and Fourier series 378
9.3 Fourier series 389
9.4 Sturm-Liouville problems 400
9.5 Properties of Sturm-Liouville problems 405
9.6 The Sturm separation theorem and the zeros of Bessel functions 410
9.7 Nonhomogeneous boundary value problems 416

Chapter 10 **Partial Differential Equations**

10.1 Preliminaries 424
10.2 The vibrating string 430
10.3 Separation of variables 437
10.4 Two-dimensional heat flow and Laplace's equation 444
10.5 Laplace transform methods for partial differential equations 459

Chapter 11 **The Existence and Uniqueness of Solutions**

11.1 Successive approximations: A local existence-uniqueness theorem 470
11.2 Systems of linear differential equations 482

Chapter 12 **Nonlinear Equations and Stability**

12.1 Introduction 492
12.2 Critical points, stability, and phase portraits for linear systems 501
12.3 Stability of nonlinear systems 518
12.4 Lyapunov's method 529

Appendix 1 Integral Tables A–1

Appendix 2 Laplace Transforms A–7

Appendix 3 FORTRAN-BASIC Primer A–11

Appendix 4 Determinants A–25

Solutions to Odd-Numbered Exercises S–1

Index I–1
