Contents

1 Introduction 1
1.1 Three Phases of Ultra-cold Matter 1
1.2 Historical Perspective 3
1.3 Book Overview 4
References 6

Part I Atomic Clouds

2 Laser Cooling 9
2.1 Atom in the Laser Field 9
2.2 Laser Cooling Force 14
2.3 Doppler Limit 17
2.4 Magnetic Traps 18
2.4.1 Multipolar Field Configuration 19
2.4.2 Helmholtz Configuration 20
2.4.3 Ioffe Configuration 20
2.4.4 Anti-Helmholtz Configuration 21
2.5 Sisyphus Cooling 23
2.6 Evaporative Cooling 25
2.7 Sympathetic Cooling 29
References 33

3 Wave Kinetic Approach 35
3.1 Wigner-Moyal Procedure 35
3.1.1 Quasi-distributions 36
3.1.2 Weyl Transformation 39
3.1.3 Wave Kinetic Equation 41
3.1.4 The Quasi-classical Limit 43
3.2 Center-of-Mass Equation 44
3.3 Wave Kinetic Description of the Laser-Atom Interaction 47
3.4 Two-Level Atom 48

3.5 Links with Dynamics and Statistics 50
3.5.1 Quasi-classical Limit 50
3.5.2 Momentum Diffusion and the Doppler Limit 51
3.6 Lambda Configuration 53
3.7 Two Coupled Radiative Transitions 55
3.8 Influence of a Blue-Detuned Pump 58
References 60

4 Atomic Clouds 63
4.1 Atom-Atom Collisions 64
4.2 Feshbach Resonances 69
4.3 Collective Forces 74
4.4 Equilibrium Profiles 79
4.4.1 Qualitative Discussion 80
4.4.2 Quantitative Model 82
4.5 Coulomb Expansion 84
References 88

5 Waves and Oscillations in Clouds 89
5.1 Hybrid Sound 89
5.1.1 Fluid Description 89
5.1.2 Kinetic Approach 91
5.2 Tonks-Dattner Modes 96
5.3 Large Scale Oscillations 99
5.3.1 The Centre-of-Mass Oscillation 99
5.3.2 Normal Modes 100
5.4 Nonlinear Mode Coupling 103
5.5 Quasi-linear Diffusion 107
5.6 Phaser, the Phonon Laser 110
References 114

6 Photons in the Ultra-cold Gas 115
6.1 Optical Properties 116
6.2 Modulational Instability 118
6.3 Photon Bubbles 120
6.4 Roton Instability 125
6.5 Density Fluctuations 131
6.6 Collective Laser Scattering 135
References 138

Part II The Physics of Bose-Einstein Condensates

7 Bose Einstein Condensates 143
7.1 Uniform Gas 144
7.2 Trapped Gas 145
7.3 Atom Correlations 149

7.4 Mean Field Approximation 153
7.5 Thomas-Fermi Approximation 155
7.6 Fluid and Kinetic Formulations 158
7.6.1 Quantum Fluid Equations 158
7.6.2 Wave Kinetic Equation 160
References 161

8 Elementary Excitations in BECs 163
8.1 Sound Waves 163
8.2 Global Oscillations 165
8.3 Kinetic Processes 168
8.4 Landau Damping 169
8.5 Dynamical Instabilities 171
8.6 Wakefields in Bose-Einstein Condensates 174
References 180

9 Solitons 181
9.1 Effective One-Dimensional Gross-Pitaevskii Equation 182
9.2 One-Dimensional Dark and Grey Solitons 184
9.2.1 Energy of the Soliton 187
9.3 The Inverse Scattering Transform 188
9.4 Interaction Between Two Dark Solitons 189
9.5 Bright Solitons 193
9.6 Dark Solitons in Harmonic Traps 194
9.7 The Soliton Gas 197
9.8 Solitons in Two Dimensions 200
References 202

10 Quantum Field Theory of BECs 205
10.1 Bogoliubov Theory 205
10.2 BEC Depletion 209
10.3 Phonon Pair Creation 211
10.3.1 Time Refraction 211
10.3.2 Dynamical Casimir Effect 215
10.4 Acoustic Black Holes 217
10.4.1 Hawking Radiation 218
10.4.2 Effective Metric in a Condensate 219
10.4.3 Acoustic Hawking (Unruh) Radiation 220
References 222

11 Superfluidity 225
11.1 Phonon Kinetics 225
11.2 Phonon Fluid Equations 228
11.3 Slow Perturbations in the Superfluid 230
11.4 Superfluid Currents 232
11.5 Phonon Landau Damping 234

11.6 Roton Excitation 235
11.6.1 Wave Kinetic Equation with Dipolar Interactions 236
11.6.2 Dispersion Relation 237
11.6.3 Roton Instability 238
References 240

12 Rotating BECs 241
12.1 Quantum Vortices 241
12.2 Vortex Nucleation 244
12.3 Tkachenko Modes 245
12.4 Rossby Waves 246
12.5 Rossby-Tkatchenko Modes 252
12.6 Coupling with Photon OAM States 254
References 256

13 Quantum Coherence 257
13.1 Atom Interferometry 257
13.2 Time Interferometry 259
13.3 Decoherence Processes 262
13.4 Gravitational Decoherence 265
13.5 Josephson Tunneling of a Condensate 269
References 274

Part III The Physics of Ultracold Plasmas

14 Ultra-cold Plasmas 277
14.1 Different Plasma Regimes 278
14.2 Basic Plasma Properties 280
14.3 Ionization Processes 283
14.4 Single Particle Motion 285
14.5 Adiabatic Invariants 289
14.6 Plasma Equations 293
14.6.1 Klimontovitch Equation 294
14.6.2 Vlasov Equation 296
14.6.3 Kinetic Equations with Collisions 298
14.7 Fluid Equations 299
References 302

15 Physics of Rydberg Plasmas 305
15.1 Plasma Expansion in the Collisional Regime 306
15.1.1 Free Diffusion 306
15.1.2 Ambipolar Diffusion Regime 308
15.1.3 Recombination in Volume 309
15.2 Collisionless Plasma Expansion 310
15.3 Strongly Coupled Ions 313
15.3.1 Ion-Neutral Coupling 313

15.3.2 Ion-Ion Coupling 316
15.3.3 Phase Transitions 317
15.4 Disorder Induced Heating 321
15.5 Quasi-equilibrium States 323
15.6 Rydberg Atoms 326
15.6.1 Basic Properties 326
15.6.2 Rydberg Blockade 329
15.7 Three-Body Recombination 334
References 336

16 Waves in Rydberg Plasmas 339
16.1 Isotropic Plasmas 340
16.2 Polaritons and Slow Light 343
16.3 Ponderomotive Force 349
16.4 Electron Drift Instability 351
16.5 Drift Waves at Plasma Gradients 353
16.6 Waves in Magnetized Cold Plasmas 355
16.6.1 General Dispersion Relation 355
16.6.2 Parallel Propagation 358
16.6.3 Perpendicular Propagation 360
16.7 Waves in Expanding Plasmas 361
16.8 Waves in Strongly Coupled Plasmas 364
References 366

17 Kinetic Theory of Waves 367
17.1 Kinetic Dispersion Relation 368
17.2 Electron Plasma Waves 371
17.3 Ion Acoustic Waves 373
17.4 Waves in Quantum Plasmas 374
17.5 Sound Waves in a Turbulent Plasma 378
17.5.1 Plasmon Kinetic Equation 378
17.5.2 Ion Oscillations 380
References 381

18 Conclusions 383

Appendix 385
A.1 Atomic Structure 385
A.2 Quantum Theory of Radiative Transitions 389

Index 395
