CONTENTS

Studies of the sinusoidally driven weakly bound atomic electron in the threshold region for classically stochastic behavior
J E Bayfield 1

Relevance of chaos in quantum mechanics: the hydrogen atom in the microwave field
G Casati 35

The measurement of quantum chaos
S Sarkar and J S Satchell 45

Quantum chaos and the measurement problem
A Peres 59

Semiclassical chaology
M Berry 81

Chaos in dissipative quantum maps
R Graham 89

Chaos and quantum behavior in kicked tops
F Haake, M Kus and R Scharf 115

The Dynamics of the Pure State Density Matrix for Hamiltonian Systems
E R Pike, S Sarkar and J S Satchell 119

Quantum theory of chaotic Rabi oscillations
R Graham and M Höhnerbach 147

Quantization of the Chirikov resonance overlapping criterion
S Graffi 163

Ergodic Adiabatic Invariants
E Ott 173

Sequential measurements in quantum mechanics
W E Lamb, Jr 183

Measurements distributed in time
C M Caves 195

Quantum mechanics in strong time dependent external fields
Y Pomeau 209

A model for a quantum-mechanical measurement
N G van Kampen 215

Dynamical systems and the positive P-representation
A Schenzle 225

Workshop Report on Quantum Chaos and Measurement
W Firth, J Elgin and J S Satchell 251

Contributors 255
