CONTENTS

Foreword ix
Preface xi

INTRODUCTORY CHAPTERS

The Born-Oppenheimer Approximation in Molecular Quantum Mechanics 1
C. Alden Mead

Electronic Structure Theory 18
Jan Almlöf

SPECTRAL THEORY

Spectra of Atoms and Spectral Theory of Atomic Hamiltonians 41
William P. Reinhardt

Stieltjes Methods for Schrödinger Spectra: Hilbert-Space Approximations to the Discrete and Continuum Eigenstates of Spatially Anisotropic Hamiltonian Operators 85
Peter W. Langhoff

CLASSICAL MANY-BODY SYSTEMS

Classical Molecular Dynamics Simulations: Algorithms and Applications, Stochastic Dynamics, and Free Energies 136
Wilfred F. van Gunsteren

Collective Phenomena in Statistical Mechanics and the Geometry of Potential Energy Hypersurfaces 156
Frank H. Stillinger

QUANTUM DYNAMICS

Quantum Evolution in External Electromagnetic Fields: Exact Results and Asymptotic Approximations 175
T. A. Osborn

New Time-Dependent and Time-Independent Computational Methods for Molecular Collisions 207
Donald J. Kouri, Yan Sun, Richard C. Mowrey, John Z. H. Zhang, Donald G. Truhlar, Kenneth Haug, and David W. Schwenke

DYNAMICAL GROUPS

Lie Algebraic Approach to Molecular Structure and Dynamics 245
R. D. Levine

Lie Algebraic Approach to the Many-Electron Correlation Problem..... 262
Josef Paldus

Unitary Group Approach to Configuration Interaction Calculations
of the Electronic Structure of Atoms and Molecules..... 300
Isaiah Shavitt
