Contents

Contributors to Volume 3 v
Preface vii

1. X-ray Emission Spectroscopy

D. S. Urch

I. Introduction 1
II. X-ray Emission 2
III. Experimental Techniques of X-ray Spectroscopy . . . 6
IV. X-ray Emission Spectra of Chemical Compounds . . . 13
V. Photoelectron and X-ray Emission Spectra 25
VI. Conclusion 36
References 37

2. Electron Impact Spectroscopy: An Overview of the Low-energy Aspects

Robert J. Celotta and Russell H. Huebner

I. Introduction 41
II. Definitions and Experimental Preliminaries 44
III. Guide to Theory 51
IV. Single-parameter Experiments 59
V. Multiparameter Experiments 104
VI. Applications and Future Trends 113
References 119

3. High-energy Electron Impact Spectroscopy

R. A. Bonham

I. Introduction 127
II. Survey of Experimental Results 155
References 181

4. Vacuum Ultraviolet Photoelectron Spectroscopy of Transient Species

J. M. Dyke, N. Jonathon and A. Morris

I. Introduction 189
II. Experimental Considerations 190
III. Useful Theoretical Methods in Interpretation of Photoelectron Spectra of Small Molecules 200
IV. Calculation of Molecular Ionization Potentials by Use of the Excitation Energy Method 205
V. Prediction of Experimentally Measurable Quantities . . . 207
VI. A Review of Transient Species Studied with Vacuum Ultraviolet Photoelectron Spectroscopy 209
VII. Final Comments and Conclusions 223
References 224

5. Ion Fragmentation Mechanisms and Photoelectron Spectroscopy

J. H. D. Eland

I. Introduction 231
II. Phenomena of Photoionization and Fragmentation . . . 234
III. Models and Theories of Ion Fragmentation 244
IV. Sources of Information on Ion Fragmentation 255
V. Survey of Fragmentation and Photoelectron Spectra . . . 264
References 296

6. Analytical Applications of XPS

D. Briggs

I. Introduction 306
II. Information Content of XP-Spectra 306
III. Depth profiling in XPS 309
IV. Review of Applications 314
References 354

Subject index 359
