

Table of Contents

Part I. Models of Neural Networks

1.	The Structure of the Central Nervous System	3
1.1	The Neuron	3
1.2	The Cerebral Cortex	9
2.	Neural Networks Introduced.....	13
2.1	A Definition	13
2.2	A Brief History of Neural Network Models	13
2.3	Why Neural Networks?.....	18
2.3.1	Parallel Distributed Processing	18
2.3.2	Understanding How the Brain Works	21
2.3.3	General Literature on Neural Network Models	23
3.	Associative Memory	24
3.1	Associative Information Storage and Recall	24
3.2	Learning by Hebb's Rule	26
3.3	Neurons and Spins.....	29
3.3.1	The "Magnetic" Connection	29
3.3.2	Parallel versus Sequential Dynamics	32
3.4	Neural "Motion Pictures"	34
4.	Stochastic Neurons	38
4.1	The Mean-Field Approximation	38
4.2	Single Patterns	40
4.3	Several Patterns	42
5.	Cybernetic Networks	46
5.1	Layered Networks	46
5.2	Simple Perceptrons	47
5.2.1	The Perceptron Learning Rule	47
5.2.2	"Gradient" Learning	48
5.2.3	A Counterexample: The Exclusive-OR Gate	49

6.	Multilayered Perceptrons	52
6.1	Solution of the XOR Problem	52
6.2	Learning by Error Back-Propagation	53
6.3	Boolean Functions	56
6.4	Representation of Continuous Functions	60
7.	Applications	63
7.1	Prediction of Time Series	63
7.1.1	The Logistic Map	63
7.1.2	A Nonlinear Delayed Differential Equation	64
7.1.3	Nonlinear Prediction of Noisy Time Series	65
7.2	Learning to Play Backgammon	67
7.3	Prediction of the Secondary Structure of Proteins	69
7.4	NET-Talk: Learning to Pronounce English Text	70
8.	More Applications of Neural Networks	72
8.1	Neural Networks in High Energy Physics	74
8.1.1	The Search for Heavy Quarks	74
8.1.2	Triggering	78
8.1.3	Mass Reconstruction	79
8.1.4	The JETNET Code	80
8.2	Pattern Recognition	80
8.2.1	Handwriting and Text Recognition	80
8.2.2	Speech Recognition	83
8.2.3	3D Target Classification and Reconstruction	84
8.3	Neural Networks in Biomedicine	85
8.4	Neural Networks in Economics	87
9.	Network Architecture and Generalization	93
9.1	Building the Network	93
9.1.1	Dynamic Node Creation	93
9.1.2	Learning by Adding Neurons	95
9.2	Can Neural Networks Generalize?	96
9.2.1	General Aspects	96
9.2.2	Generalization and Information Theory	98
9.3	Invariant Pattern Recognition	102
9.3.1	Higher-Order Synapses	102
9.3.2	Preprocessing the Input Patterns	105
10.	Associative Memory: Advanced Learning Strategies	108
10.1	Storing Correlated Patterns	108
10.1.1	The Projection Rule	109
10.1.2	An Iterative Learning Scheme	111
10.1.3	Repeated Hebbian Learning	114
10.2	Special Learning Rules	117

10.2.1 Forgetting Improves the Memory!	117
10.2.2 Nonlinear Learning Rules	119
10.2.3 Dilution of Synapses	122
10.2.4 Networks with a Low Level of Activity	124
11. Combinatorial Optimization	126
11.1 NP-complete Problems	126
11.2 Optimization by Simulated Annealing	128
11.3 Realization on a Network	130
11.3.1 The Traveling-Salesman Problem	130
11.3.2 Optical Image Processing	133
12. VLSI and Neural Networks	135
12.1 Hardware for Neural Networks	135
12.2 Networks Composed of Analog Electronic Circuits	138
13. Symmetrical Networks with Hidden Neurons	144
13.1 The Boltzmann Machine	144
13.2 The “Boltzmann” Learning Rule	145
13.3 Applications	149
14. Coupled Neural Networks	151
14.1 Stationary States	151
14.2 Recurrent Back-Propagation	153
14.3 Back-Propagation Through Time	155
14.4 Network Hierarchies	159
15. Unsupervised Learning	162
15.1 “Selfish” Neurons	162
15.2 Learning by Competition	165
15.2.1 “The Winner Takes All”	165
15.2.2 Structure Formation by Local Inhibition	166
15.2.3 The Kohonen Map	167
15.3 Implementations of Competitive Learning	169
15.3.1 A Feature-Sensitive Mapping Network	169
15.3.2 The Neocognitron	171
16. Evolutionary Algorithms for Learning	174
16.1 Why do Evolutionary Algorithms Work?	176
16.2 Evolving Neural Networks	180
16.2.1 Feed-Forward Networks	181
16.2.2 Recurrent Networks	183
16.3 Evolving Back-Propagation	185

Part II. Statistical Physics of Neural Networks

17. Statistical Physics and Spin Glasses	191
17.1 Elements of Statistical Mechanics	191
17.2 Spin Glasses	194
17.2.1 Averages and Ergodicity	194
17.2.2 The Edwards–Anderson Model	196
18. The Hopfield Network for $p/N \rightarrow 0$	201
18.1 Evaluation of the Partition Function	201
18.2 Equilibrium States of the Network	205
19. The Hopfield Network for Finite p/N	209
19.1 The Replica Trick	209
19.1.1 Averaging over Patterns	211
19.1.2 The Saddle-Point Approximation	215
19.2 Phase Diagram of the Hopfield Network	219
19.3 Storage Capacity of Nonlinear Neural Networks	223
19.4 The Dynamics of Pattern Retrieval	226
19.4.1 Asymmetric Networks	226
19.4.2 Highly Diluted Networks	227
19.4.3 The Fully Coupled Network	228
20. The Space of Interactions in Neural Networks	231
20.1 Replica Solution of the Spherical Model	234
20.2 Results	239

Part III. Computer Codes

21. Numerical Demonstrations	249
21.1 How to Use the Computer Programs	249
21.2 Notes on the Software Implementation	251
22. ASSO: Associative Memory	253
22.1 Program Description	255
22.2 Numerical Experiments	259
23. ASSCOUNT: Associative Memory for Time Sequences	264
23.1 Program Description	265
23.2 Numerical Experiments	266
24. PERBOOL: Learning Boolean Functions with Back-Prop	268
24.1 Program Description	270
24.2 Numerical Experiments	272

25. PERFUNC: Learning Continuous Functions with Back-Prop	275
25.1 Program Description	275
25.2 Numerical Experiments	277
26. Solution of the Traveling-Salesman Problem	279
26.1 The Hopfield-Tank Model	279
26.1.1 TSPHOP: Program Description.....	281
26.2 The Potts-Glass Model	283
26.2.1 The Mean-Field Approximation of the Potts Model ..	284
26.2.2 TSPOTTS: Program Description.....	286
26.3 TSANNEAL: Simulated Annealing	287
26.4 Numerical Experiments	289
27. KOHOMAP: The Kohonen Self-organizing Map	291
27.1 Program Description	292
27.2 Numerical Experiments	294
28. BTT: Back-Propagation Through Time	296
28.1 Program Description	297
28.2 Numerical Experiments	300
29. NEUROGEN: Using Genetic Algorithms to Train Networks ..	303
29.1 Program Description	303
References	307
Index	325
