

CONTENTS

Preface	v
I. Mathematical Methods and Models of Chaos	
1. Models of Chaos	
Quantal Reflections of Classical Chaos <i>M. V. Berry</i>	2
Separatrix Crossing in Quantum Systems <i>J. R. Cary and P. Rusu</i>	3
Universal Behavior of Coupled Nonlinear Systems <i>G. Schmidt, F. H. Ling, and H. Kook</i>	11
Asymptotic Formulae for Cycles in the Logistic Map <i>J. Stephenson</i>	19
Finding Periodic Orbits in Chaotic Regions of the Phase Space <i>T. Riauka</i>	26
A Parallel Computation of Fractal Dimensions <i>P. J. Davies and D. B. Duncan</i>	33
2. Nonlinear Differential Equations	
Isospectral Flows: Poisson Brackets and Poisson Mappings <i>A. P. Fordy</i>	38
Exact Analytic Solutions for Partially Integrable Nonlinear Physical Systems <i>P. Winternitz</i>	55
Nonclassical Symmetry Reductions and Exact Solutions for Physically Significant Nonlinear Evolution Equations <i>P. A. Clarkson</i>	72
Analysis of the Static Spherically Symmetric Solutions of the ϕ^6 -Field Equation Obtained by Symmetry Reduction <i>A. M. Grundland, J. A. Tuszynski, and P. Winternitz</i>	80

Linear and Nonlinear Gaussian Modes and Their Connection to Conformal Symmetry	90
<i>L. Gagnon and C. Pare</i>	

Towards the Equivalence between Integrability and Painlevé Test for Partial Differential Equations	94
<i>R. Conte</i>	

3. Field Theory Methods

Non-linear Effects in Operator Formalism for Quantum Fields	104
<i>N. J. Papastamatiou and H. Umezawa</i>	

A Derivation of Two-Fluid Model from the Schrödinger Field	122
<i>Y. Takahashi</i>	

Scattering of Skyrmions in (2+1) Dimensions	134
<i>W. J. Zakrzewski</i>	

Complex Nonlinear Relations Between Newton and Schrödinger-Type Equations for the Description of Reversible and Irreversible Dynamics	146
<i>D. Schuch</i>	

II. Plasma Physics Applications

1. Lagrangian and Hamiltonian Methods

Phase-Space Plasma-Action Principles, Linear Mode Conversion, and the Generalized Fourier Transform	160
<i>A. N. Kaufman</i>	

Lagrangian Methods in Nonlinear Plasma Physics	193
<i>E. Infeld and G. Rowlands</i>	

Selfconsistent Wave-Kinetics and the Ray Oscillation Center Transformation	201
<i>E. R. Tracy and A. J. Neil</i>	

Pure Ion Plasmas, Liquids and Crystals	211
<i>D. H. E. Dubin and T. M. O'Neil</i>	

2. Nonlinearity and Solitons

- Evolution of the Modulational Instability Resulting from
Nonlinear Coupling between A Short and Long Waves 220
V. I. Karpman

- Laser Beatwave Acceleration Simulations: Solitons,
Hamiltonian Stochasticity and Anomalous Acceleration 253
*T. W. Johnston, P. Bertrand, A. Ghizzo, M. Shoucri,
J. P. Matte, E. Fjalkow, and M. R. Feix*

- Towards a Theory of Soliton Transition from Lower to Higher
Dimension 257
E. Infeld and G. Rowlands

3. Chaos and Turbulence

- Concepts in Strong Langmuir Turbulence Theory 266
D. F. DuBois and H. A. Rose

- Transition from Weak to Strong Turbulence 301
A. M. Rubenchik

- Transition to Chaos in the Nonlinear Schrödinger Model of
Resonant Absorption 308
O. Larroche and D. Pesme

- Prediction and Control of Chaotic Processes Using Nonlinear
Adaptive Networks 316
*R. D. Jones, C. W. Barnes, G. W. Flake, K. Lee,
Y. C. Lee, P. S. Lewis, M. K. O'Rourke, and S. Qian*

4. Laser-Plasma Interactions

- Experimental Observations of Nonlinear Effects in Laser-Plasma
Interactions 326
H. A. Baldis and P. E. Young

- Stimulated Raman Scattering From Laser-Produced Plasmas:
Merely Nonlinear or also Chaotic? 345
R. P. Drake and S. H. Batha

**Studies of Strongly Coupled Plasmas in Laser-Driven Shock
Wave Experiments** 355
A. Ng

**Strong Langmuir Turbulence Generated in Beam-Plasma
Interactions** 363
D. L. Newman and P. A. Robinson

III. Condensed Matter Applications

1. Nonlinear Effects at Criticality

**Glassy Dynamics in Condensed Matter Systems with Competing
Interactions** 372
A. Bishop

**Pattern Formation and Interface Dynamics in Thermodynamically
Unstable Systems** 395
R. C. Desai

**A New Method for Analysing Quantum Many-Body Problems near
the Onset of Coherence** 405
J. M. Dixon and J. A. Tuszynski

Chaotic Phenomena in a Two-Dimensional Lattice 416
M. L. A. Nip, J. A. Tuszynski, and Z. W. Gortel

2. High-Temperature Superconductivity

**High- T_c Superconductivity: The Dynamics of the Charge
Carriers and Their Interactions** 424
D. C. Mattis

Vorticity in High-Temperature Superconductors 480
M. Otwinowski, J. A. Tuszynski, and J. M. Dixon

**The Calculation of Magnetic Field Penetration in Superconductors
Using a Landau-Ginzburg Model** 488
K. Vos, J. M. Dixon, and J. A. Tuszynski

3. Magnetic Systems

- Cartesian Solver for Bloch-Like Equation 496
M. Olko and L. A. Truski
- Relaxation Processes Due to Collisions Involving Conduction
 Electrons and Magnon Solitons in Magnetic Semiconductors 504
M. V. Sataric and J. A. Tuszynski
- Free Energy Calculations of Particular Patterns for a
 Three-Dimensional Landau-Ginzburg System 510
M. Skierski, J. A. Tuszynski, and A. M. Grundland

4. Electric and Optical Multistability

- Gap Solitons and Nonlinear Response of Josephson and Electrical
 Superlattices 518
D. Barday, J. M. Bilbault, and M. Remoissenet
- Noise-Induced Transitions in a Bistable Optical System 526
I. L'Heureux
- Stability of Dense Morphologies in Electrodeposit Pattern Formation 532
M. K. Pon and L. Lam

5. Solitons in One-Dimensional Chains

- Self-Trapping of Vibrational Energy 538
A. C. Scott
- The Life Time of Davydov Solitons 551
H. Bolterauer
- A Toda Lattice Model of DNA 564
P. L. Christiansen, A. C. Scott, V. Muto, and P. S. Lomdahl

6. Liquids, Liquid Crystals and Superfluids

- Thermal Fluctuations in Quiescent Liquid Far from Equilibrium 574
J. V. Sengers and B. M. Law
- Unsolved Nonlinear Problems in Liquid Crystals 582
L. Lam

The Nature of Excitations in Liquid ^4He	590
<i>H. R. Glyde</i>	
Kinetics of Nonhomogeneous Processes (KNP): The Ionization of Molecules in the Liquid Phase	591
<i>G. Ramanan, N. Gee, and G. R. Freeman</i>	
Defect-Mediated Bifurcations in the Convection of a Liquid Crystal	596
<i>A. Joets and R. Ribotta</i>	
Index	615
List of Participants	621
