

## Contents

LIST OF CONTRIBUTORS	ix
PREFACE	xi
CONTENTS OF PART B	xiii

### **1 Introduction**

*Edward Teller*

I. Early History	1
II. Controlled Fusion in Low-Density Plasmas	4
III. Some Properties of Plasmas	12
IV. The Role of Plasma Instabilities	20
V. Types of Magnetic Fusion Machines	23
VI. Outlook	28
References	29

### **2 Tokamak Plasma Stability**

*M. N. Rosenbluth and P. H. Rutherford*

I. Introduction	32
II. Equilibrium	33
III. Stability: General Considerations	40
IV. MHD Stability	51
V. MHD Stability of the Tokamak	58
VI. Resistive Instabilities	76
VII. Microinstabilities	91
VIII. Cross-Field Transport	103
IX. Conclusions	119
References	120

### 3 The Tokamak

*H. P. Furth*

I. Introduction	124
II. The Tokamak Configuration	126
III. Experimental Tokamak Devices	136
IV. Plasma Heating Methods	147
V. MHD Stability	168
VI. Confinement	185
VII. Future Tokamak Devices	220
References	233

### 4 Stellarators

*J. L. Shohet*

I. Introduction	243
II. Particle Orbits in Stellarators and Torsatrons	260
III. Transport in Stellarator/Torsatrons	265
IV. MHD Equilibrium and Stability	268
V. Survey of Experimental Devices	272
VI. Stellarator Reactors	282
VII. Summary	287
References	287

### 5 Mirror Theory

*T. K. Fowler*

I. Introduction	291
II. The Mirror Effect	293
III. The Magnetic Well Mirror Geometry	300
IV. The Standard Mirror Concept	310
V. The Tandem Mirror Concept	319
VI. Mirror Stability Theory	328
VII. Mirror Reactors	340
VIII. Field-Reversed Mirror	346
References	353

### 6 Experimental Base of Mirror-Confinement Physics

*R. F. Post*

I. Introduction	358
II. Early Observations	359
III. Establishment of the Principles of Mirror Confinement—Early Work	360

IV. The Magnetic Well Principle—The Ioffe Experiment	367
V. Microinstabilities—A First Look	369
VI. Neutral-Beam and Molecular Ion Injection	371
VII. Microinstabilities—A Closer Look	383
VIII. High-Density Plasmas and the DGH and CLC Modes	390
IX. The DCLC Mode; 2XIIB and Warm-Plasma Stabilization	396
X. Ambipolar Potentials and Electron Physics	403
XI. Magnetic Wells and High Beta	414
XII. High-Density Mirror Experiments—Theta Pinches and Multiple-Mirror Systems	417
XIII. Direct Conversion and Mirror Fusion Systems	419
XIV. New Mirror Facilities	429
References	433

## 7 The Reversed-Field Pinch

*D. A. Baker and W. E. Quinn*

I. Introduction	438
II. The Reversed-Field Pinch Configuration	442
III. Methods of Producing the RFP Configuration	445
IV. Review of Z-Pinch Stability Theory	450
V. Review of RFP Experiments	456
VI. Physics of Reversed-Field Pinch	465
VII. Reactor Aspects of the RFP	469
References	471
