

TABLE OF CONTENTS

Foreword by Arthur E. Ruark	v
Preface	vii
CHAPTER I INTRODUCTION	1
FUSION OF HYDROGEN ISOTOPES	1
ENERGY RELEASE IN FUSION REACTIONS	2
OPERATIONAL ASPECTS OF FUSION REACTORS	3
THERMONUCLEAR REACTIONS	4
CHAPTER II PHYSICAL CONDITIONS FOR THERMONUCLEAR REACTIONS	6
MECHANISM OF THERMONUCLEAR REACTIONS	6
The Coulomb Barrier, 6—Thermonuclear Reactions, 8—Rates of Thermonuclear Reactions, 10—Nuclear Fusion Reactions, 13—Charged-Particle Energies, 14—Thermonuclear Reaction Cross Sections, 16—Reaction Mean Free Path, 20—Thermonuclear Reaction Power Density, 22	
RADIATION LOSSES FROM PLASMA	25
Bremsstrahlung, 25—Rate of Bremsstrahlung Emission, 29—Ideal Ignition Temperature, 33—Effect of Impurities on Radiation Loss, 36—Cyclotron Radiation, 37	
OPERATIONAL CONDITIONS	40
Continuous or Pulsed Operation, 40—Operating Limitations, 41—Utilization of Thermonuclear Neutrons, 42	
CHAPTER III POSSIBLE APPROACHES TO CONTROLLED FUSION	46
CONFINEMENT OF PLASMA	46
Introduction, 46—Electric and Magnetic Fields, 47—Confinement by Electric Field, 49—Confinement by Magnetic Field, 50	
METHODS OF PLASMA CONFINEMENT	55
The Pinch Effect, 55—The Stellarator, 58—Magnetic Mirror Systems, 61—The Astron System, 63	
FUSION REACTIONS WITH ACCELERATED PARTICLES	64
Bombardment of a Solid Target, 64—Bombardment of a Plasma Target, 65—Heating by Accelerated Particles, 66—Colliding Beams of Accelerated Particles, 67	
CHAPTER IV ELEMENTARY PLASMA THEORY	69
INTRODUCTION	69
Plasma Properties, 69—Theoretical Plasma Models, 69	
MOTION OF CHARGED PARTICLES IN ELECTRIC AND MAGNETIC FIELDS	71
Introduction, 71—Motion in a Uniform Magnetic Field, 72—Motion	

in Electric and Magnetic Fields, 74—Motion in a Time-Varying Magnetic Field, 76—Motion in an Inhomogeneous Magnetic Field, 77—Effect of Gravitational and Centrifugal Forces, 79—Particle Drift in a Toroidal Magnetic Field, 80	
COLLISION PHENOMENA IN A PLASMA	82
Introduction, 82—Electrical Neutrality of a Plasma, 83—The Shielding Distance, 84—Short-Range Interactions, 87—Long-Range Interactions, 90—Relaxation Times, 95—Collisions of Ions with Electrons, 97—Transfer of Energy from Ions to Electrons, 99—Electrical Conductivity of Plasma, 101	
PLASMA OSCILLATIONS	104
Introduction, 104—General Wave Equation, 104—Electromagnetic Waves, 106—Propagation of Electromagnetic Waves, 107—Electromagnetic Waves in Plasma Containing a Magnetic Field, 108—Electrostatic Waves, 111—Hydromagnetic Waves, 112	
CHAPTER V FORMATION AND HEATING OF PLASMA	116
FORMATION OF PLASMA: BREAKDOWN OF GAS	116
OHMIC HEATING OF PLASMA	119
General Principles, 119—Rate of Ohmic Heating, 121	
HEATING BY MAGNETIC COMPRESSION	123
Adiabatic Compression, 123—Shock Heating, 129—Heating by Magnetic Pumping, 134	
ION CYCLOTRON RESONANCE HEATING	137
General Considerations, 137—Single-Particle Treatment, 139—Ion Cyclotron Waves, 142	
PLASMA SOURCES FOR MAGNETIC MIRROR SYSTEMS	145
Introduction, 145—Occluded-Gas, High-Energy Ion Sources, 146—Occluded-Gas Ring Source, 148—Occluded-Gas, Low-Energy Ion Sources: Plasmoids, 150—Plasma Guns, 151—Plasma Formation in P.I.G. Discharge, 152—Pressure-Gradient Arc Source, 153—High-Current, High-Voltage Sources, 154—Dissociation of Deuterium Molecular Ions, 155—High-Energy Beams of Neutral Atoms, 160	
CHAPTER VI PLASMA DIAGNOSTIC TECHNIQUES	164
ELECTRICAL CHARACTERISTICS OF THE DISCHARGE	164
Current and Voltage Measurements, 164—Resistance and Electron Temperature, 167—Temperature in a Pinched Discharge, 169	
MICROWAVE TECHNIQUES	170
Electron Density, 170—Microwave Noise and Electron Temperature, 176	
SPECTROSCOPIC MEASUREMENTS	179
Stark Effect Broadening and Ion Densities, 179—Doppler Broadening and Ion Temperatures, 185—Comparison of Line Intensities and	

Plasma Temperatures, 187—Spectroscopic Observations of Contaminants, 190—Continuum Radiation Measurements, 190	
PROBE TECHNIQUES	194
Electrical Probe Measurements, 194—Double-Probe Measurements, 199—Magnetic Probes, 202—Electron Beam Probes, 208	
HIGH-SPEED PHOTOGRAPHY	209
Introduction, 209—Streak Cameras, 209—Image Converter Tube Cameras, 210	
NUCLEAR RADIATION MEASUREMENTS	212
Neutron Detection and Counting, 212—Proton Measurements, 216—X-Ray Measurements, 219	
OTHER DIAGNOSTIC TECHNIQUES	220
Direct Pressure Measurements, 220—Mass Spectra Studies, 221	
CHAPTER VII THE PINCH EFFECT	225
THEORETICAL TREATMENT	225
The Quasi-Equilibrium Pinch, 225—The Bennett Equation, 228—Dynamics of a Pinched Plasma, 230	
PINCH INSTABILITIES AND STABILIZATION	234
Instability of the Pinched Discharge, 234—Stabilization of the Pinched Discharge, 236—Intermixing of Magnetic Fields, 241	
LINEAR PINCHED DISCHARGE	243
General Experimental Procedures, 243—Experimental Observations, 245—Fast Linear Pinches, 251—The Superfast Pinch, 253—Stabilized Linear Pinched Discharge, 254—Observations of Pinch Stability, 255—The Reversed Axial Field Pinch, 258—Plasma Pressure Distributions, 260—The Screw Dynamic (Linear) Pinch, 262—Low Voltage-Gradient Discharges in Metal-Walled Tubes, 262	
TOROIDAL PINCHED DISCHARGES	264
Experimental Techniques, 264—Medium Voltage-Gradient Toroidal Pinches, 267—Metal-Walled Toruses, 269	
NEUTRON PRODUCTION IN PINCHED DISCHARGES	273
General Characteristics, 273—Origin of Nonthermonuclear Neutrons, 276	
CONSTRICTED DISCHARGES OF SPECIAL TYPES	277
Sheet Pinch Devices, 277—The “Hard-Core” Discharge, 280	
SUMMARY AND CONCLUSIONS	282
CHAPTER VIII THE STELLARATOR	290
THE ROTATIONAL TRANSFORM	290
Introduction, 290—Properties of Rotational Transforms, 291—Confinement by Magnetic Field with Rotational Transform, 294—Production of a Rotational Transform, 295—Corrugated Magnetic Fields, 300	

CONFINEMENT LIMITATIONS IN THE STELLARATOR	301
Plasma Pressure Limitations in Equilibrium Confinement, 301—	
Plasma Instabilities: The Limiting Current, 305—Plasma Stabiliza-	
tion, 307	
STELLARATOR OPERATIONS	308
Plasma Heating, 308—The Divertor, 310	
EXPERIMENTAL STELLARATORS	314
Preliminary Stellarator Models, 314—Later Stellarator Models, 318—	
Flexible Stellarator Models, 320	
RESULTS OF EXPERIMENTAL STUDIES	322
Ohmic Heating, 322—Plasma Phenomena After Heating Pulse, 326—	
Heating by Magnetic Pumping, 327—Heating by Ion Cyclotron	
Resonance, 328—Experiments with Divertor, 329	
SUMMARY AND CONCLUSIONS	330
Results of Experiments, 330—The Model C Stellarator, 332	
CHAPTER IX MAGNETIC MIRROR SYSTEMS	336
THEORY OF MAGNETIC MIRRORS	336
Introduction, 336—Adiabatic Invariants: Magnetic Moment, 337—	
Particle Reflection in a Magnetic Field, 340—Conditions for Reflec-	
tion by a Magnetic Mirror, 341—Trapping in a Potential Well, 342—	
Particle Energy and Pitch Angle Transformations, 343—Loss Cones	
and Loss Probability, 344—Plasma Confinement and Stability, 346	
LOSSES FROM MAGNETIC MIRROR SYSTEMS	347
Loss by Collision, 347—Loss Due to Ambipolar Effects, 351—Energy	
Loss Due to Impurities, 352	
PLASMA INJECTION IN MAGNETIC MIRROR SYSTEMS	353
Introduction, 353—Time-Varying Fields: External Injection, 353—	
External Injection: Constant Mirror Ratio, 355—External Injection:	
Increasing Mirror Ratio, 357—Time-Varying Fields: Internal In-	
jection, 358—Traveling Mirror Injection, 362—Radiofrequency	
Trapping, 363	
ORDER-DISORDER TRAPPING	363
Capture by Collisional Interactions, 363—Entropy Trapping of	
Charged Particles, 365—Ion Magnetron Trapping, 366	
TRAPPING BY CHANGE IN CHARGE-TO-MASS RATIO	366
Injection of High-Energy Neutral Atoms, 366—Injection by Arc	
Dissociation of Molecular Ions, 368—Dissociation of Molecular Ions	
by Gas Collision, 373	
PLASMA COMPRESSION IN MAGNETIC MIRROR SYSTEMS	375
Radial Compression, 375—Axial Compression, 376—Effects of Finite	
Dimensions of a Mirror Field, 377—Combined Radial and Axial	
Compression, 380—Losses During Radial Compression, 382	
EXPERIMENTAL RESULTS	385

Early Studies of Magnetic Mirror Systems, 385—High-Compression and Heating Experiments, 388—Multistage High Compression, 390—Plasma Injection Studies, 391—Confinement of Beta Particles in Mirror Geometry, 394—The DCX System, 395—The OGRA Device, 399	
SUMMARY AND CONCLUSIONS	400
CHAPTER X THE ASTRON SYSTEM	404
THE E-LAYER	404
Formation of the E-Layer, 404—Electron Injection, 405	
CONFINEMENT AND PROPERTIES OF PLASMA	407
Formation of a Magnetic Field, 407—Formation and Heating of Plasma, 408—Plasma Equilibrium and Stability, 409	
ASTRON OPERATING CONDITIONS	411
Energy Balance Requirements, 411	
EXPERIMENTAL PROGRAM	412
CHAPTER XI MISCELLANEOUS PROPOSALS FOR PLASMA CONFINEMENT AND HEATING	414
FAST MAGNETIC COMPRESSION EXPERIMENTS	414
General Principles, 414—Experimental Studies, 417	
CUSPED GEOMETRIES	421
Introduction, 421—Particle Losses from Cusped Geometries, 422—Reduction of Losses, 424—Experimental Studies, 426	
ROTATING PLASMA STUDIES	427
Introduction, 427—Rotating Plasma in a Magnetic Mirror Field, 429—The Homopolar Experiment, 430—Ixon Experiments, 432—Ion Magnetron Experiments, 435	
PLASMA CONFINEMENT BY RADIOFREQUENCY FIELDS	437
General Principles, 437—Frequency of Confining Radiation, 439—Power Dissipation by Skin Effect, 440—Experimental Studies, 442	
INERTIAL-ELECTROSTATIC PLASMA CONFINEMENT	445
General Principles, 445—Quantitative Treatment, 446	
CHAPTER XII ENERGY LOSSES AND SCALING LAWS	450
SOURCES OF ENERGY LOSS	450
Direct and Indirect Losses, 450	
DIFFUSION OF PLASMA IN A MAGNETIC FIELD	451
Introduction, 451—Weakly Ionized Plasma: No Magnetic Field, 452—Weakly Ionized Plasma in a Magnetic Field, 454—Ambipolar Diffusion, 456—Diffusion in Magnetic Field of Finite Dimensions, 459—Experimental Diffusion Studies, 462—Diffusion in Highly Ionized Plasmas, 466	
THERMAL CONDUCTION LOSSES	469
Introduction, 469—Thermal Conduction in the Absence of a Magnetic Field, 470	

LOSSES DUE TO CHARGE EXCHANGE	473
Measurement of Cross Sections, 473—Cross Section Results, 474	
OPTICAL RADIATION LOSSES	476
Effect of Impurities, 476—Extent of Ionization, 477—Magnitude of Radiation Loss, 478	
SCALING LAWS	478
Thermonuclear Power Production, 478—Scaling of Direct Energy Losses, 480—Scaling of Magnet Losses, 481	
CONCLUSION	482
CHAPTER XIII PLASMA STABILITY THEORY	484
INTRODUCTION	484
Stable and Unstable Equilibria, 484—Simple Equilibrium Systems, 485	
HYDROMAGNETIC THEORY	486
Normal Mode Analysis, 486—Variational Method, 491	
APPLICATIONS OF STABILITY THEORIES	492
Stability of the Pinched Discharge, 482—Stability in Stellarator Systems, 495	
COLLISIONLESS (NONEQUILIBRIUM) THEORIES	496
The Boltzmann Equation, 496	
APPENDIX A: APPLICATION OF THE VARIATIONAL PRINCIPLE TO A PERFECTLY DIAMAGNETIC PLASMA	500
APPENDIX B: NORMAL MODE ANALYSIS OF THE PINCH WITH SHARP BOUNDARY	505
GENERAL REFERENCES	511
INDEX	513
