

CONTENTS

SUMMARY	9
I. INTRODUCTION	11
II. DIAGNOSTIC REQUIREMENTS FOR ITER	17
1. SPECIFICATIONS	17
2. OUTSTANDING ISSUES	20
III. DIAGNOSTIC ACCESS	23
1. GUIDELINE FOR DESIGN OF DIAGNOSTICS	23
2. NUMBER OF DIAGNOSTIC PORTS AND THEIR ALLOCATION	25
3. DIAGNOSTIC PENETRATIONS	25
4. DEDICATED DIAGNOSTIC PORT AND SPECIAL SHIELDING BLANKET	32
IV. ITER DIAGNOSTIC SYSTEM	35
1. DIAGNOSTICS FOR CONTROL, SAFETY AND PERFORMANCE	35
1.1 Magnetic diagnostics	35
1.2 Fusion product diagnostics	42
1.3 Interferometry and polarimetry	61
1.4 Bolometric measurements	65
1.5 Measurement of electron cyclotron emission (ECE) .	69
1.6 Edge, first wall and operational diagnostics	72
1.7 Thomson scattering	86
1.8 Collective scattering	90
1.9 Microwave reflectometry	94
2. DIAGNOSTICS FOR PLASMA OPTIMIZATION	98
2.1 Spectrometry for ITER in the range 0.1-1000 nm ...	98
2.2 Active charge exchange recombination spectroscopy and particle analysis	107
3. FURTHER PLANNED DIAGNOSTICS	111
3.1 Introduction	111
3.2 X-ray imaging	111
3.3 X-ray pulse-height analysis	112

3.4	X-ray and synchrotron measurement of runaway electrons	112
3.5	Ion cyclotron emission probes	113
3.6	Pellet measurements	114
3.7	Blanket diagnostics	116
V.	DIAGNOSTICS R&D PLAN	117
1.	OVERVIEW	117
2.	RADIATION EFFECTS ON COMPONENTS	117
3.	NEW AND SIGNIFICANTLY DIFFERENT DIAGNOSTIC METHODS	119
4.	NEW CALIBRATION METHODS	120
5.	NEW DIAGNOSTIC COMPONENTS	120
6.	STUDIES OF NEW METHODS ON OPERATING FUSION EXPERIMENTS	121
7.	DEVELOPMENT OF DIAGNOSTIC COMPUTER CODES	121
8.	DEVELOPMENT OF COMPUTER METHODS FOR REAL-TIME DATA HANDLING	121
9.	RELIABILITY STUDIES OF OPERATING EQUIPMENT	121
10.	THE DIAGNOSTIC R&D PLAN	121
	APPENDIX: ITER INFORMATION	123
1.	ITER DEVICE AND PLASMA PARAMETERS	123
2.	RADIATION FLUXES AND FLUENCES	124
3.	NEUTRAL PARTICLE FLUX	128
4.	STRAY MAGNETIC FIELDS	128
5.	TEMPERATURES	128
6.	VACUUM	130
