

CONTENTS

I. GENERAL INTRODUCTION	13
1. INTRODUCTION	13
2. FUNCTIONS OF CD/H SYSTEMS	13
3. GENERAL PHYSICS REQUIREMENTS FOR CD/H	15
4. MAJOR PHYSICS REQUIREMENTS FOR CD/H	15
4.1 Heating to ignition	15
4.2 Power variability	15
4.3 Current profile control	15
4.4 Impurity control	16
5. REFERENCE, ALTERNATIVE AND SUPPLEMENTARY CD/H SYSTEMS	16
5.1 Neutral beam system	16
5.2 Lower hybrid system	17
5.3 Electron cyclotron system	17
5.4 Ion cyclotron system	17
II. NEUTRAL BEAM SYSTEM	21
1. INTRODUCTION	21
2. FUNCTION	26
3. REQUIREMENTS	26
4. DESIGN ISSUES	28
5. DESIGN	30
5.1 Euratom proposal	32
5.2 Japan proposal	37
5.3 Soviet proposal	37
5.4 United States proposal	38
5.5 Discussion of design	38
5.5.1 Configuration	38
5.5.2 Ion sources	38
5.5.3 Accelerators	38
5.5.4 High-voltage insulator	40
5.5.5 High-voltage power supply and transmission ...	42
5.5.6 Profile controller	42
5.5.7 Neutralizers	43
5.5.8 Ion dump	43
5.5.9 Vacuum	43
5.5.10 Ports	43
5.5.11 Efficiency	45

5.5.12	Magnetic shielding	45	4.1.9	Multijunction modularity, spectral shaping	97
5.5.13	Nuclear shielding	46	4.1.10	RF windows, neutronics	98
5.5.14	Availability	46	4.1.11	RF transmission lines and components	100
5.5.15	Maintenance	46	4.1.12	Integration issues	102
5.5.16	Utilities	47	4.1.13	Klystrons	104
6.	CONCLUSIONS AND RECOMMENDATIONS	47	4.2	Main characteristics	109
III.	LOWER HYBRID SYSTEM	53	4.2.1	General layout	109
1.	INTRODUCTION	53	4.2.2	RF parameters	109
1.1.	Functions of the lower hybrid wave (LHW) system	53	4.2.3	RF plug and supplies	109
1.1.1	Experimental status	53	4.2.4	RF power plant, RF transmission lines	109
1.1.2	Understanding	54	4.2.5	Maintenance	110
1.1.3	Status of technology vs needs	54	4.3	Interface with other systems and with operation	111
1.1.4	Functions of LHW in ITER	54	4.3.1	Tokamak operation	112
1.2	Design activities during the CDA	55	4.3.2	Impact on other systems	113
2.	SUMMARY OF THE SYSTEM DESIGN	55	5.	CONCLUSIONS AND RECOMMENDATIONS	113
2.1	Description of the reference design	55	5.1	Workplan till commissioning	113
2.2	Variants and optional features	59	5.2	R&D needs	113
3.	DESIGN BASIS	63	5.2.1	Technology	113
3.1	General requirements	63	5.2.2	Physics	116
3.1.1	LHW physics design requirements and design constraints	63	5.3	Conclusions	116
3.1.2	Tokamak design constraints	66	IV.	ELECTRON CYCLOTRON SYSTEM	121
3.2	Design criteria and philosophy	68	1.	INTRODUCTION	121
3.2.1	Basic design philosophy	68	2.	SUMMARY	122
3.2.2	Options resulting for the ITER design	68	3.	FUNCTION OF THE SYSTEM	125
3.2.3	Further options taken in the course of the CDA	74	4.	DESIGN REQUIREMENTS	126
3.3	Database	74	4.1	Physics requirements	126
4.	SUBSYSTEMS DESIGN AND ANALYSIS	74	4.2	Technological requirements	127
4.1	Critical issues, descriptions, analysis, options	74	5.	CRITICAL DESIGN AND DEVELOPMENT ISSUES	127
4.1.1	Pumping system	75	5.1	Physics issues	127
4.1.2	Cooling system	76	5.2	Technological issues	128
4.1.3	Disruption induced stresses	77	6.	DESIGN DESCRIPTION	131
4.1.4	Thermomechanical analysis	84	6.1	Logic of the design	131
4.1.5	Erosion of the launcher mouth, mouth material	87	6.2	Power supply and other auxiliaries	131
4.1.6	Grill-plasma matching; provision for radial motion of the antenna	92	6.3	Microwave sources	133
4.1.7	Effective launched power density	94	6.3.1	Potential of EC wave sources	133
4.1.8	Port allocation, poloidal location of the launcher	95	6.3.2	Source development	133
			6.3.3	Frequency variation	134
			6.3.4	The reference source	138
			6.4	RF source and auxiliary rooms	138
			6.5	Quasi-optical convertor, matching mirrors and polarizer	139

6.6	Transmission lines	140
6.6.1	Closed waveguide system	142
6.6.2	Quasi-optical transmission system	143
6.6.3	Transmission line efficiency	144
6.7	Antenna	145
6.7.1	Generalities	145
6.7.2	Windows	149
6.7.3	Antenna reflectors	151
6.7.4	Materials for the reflectors	158
6.7.5	Antenna integration	159
6.7.6	Antenna maintenance	159
6.7.7	Neutron dose in the antenna area	160
6.8	Valves	161
6.9	Pumps	161
6.10	Building integration	162
6.11	System efficiency	162
6.12	Reliability/Availability	163
6.13	Safety	163
6.14	Interfaces	164
7.	CONCLUSIONS AND FUTURE NEEDS	164
7.1	Critical issues, information needed, necessary studies and developments, long-term technology R&D	164
7.2	Conclusions	165

V. ION CYCLOTRON HEATING AND CURRENT

	DRIVE SYSTEM	169
1.	DESIGN BASIS FOR IC SYSTEM	169
1.1	General requirements	169
1.1.1	Current drive physics requirements	169
1.1.2	Mechanical requirements	170
1.2	Design criteria and philosophy	170
1.3	Overall system description	170
1.4	Frequency of operation for current drive	174
1.5	System efficiency for current drive	174
2.	SUBSYSTEM DESIGN AND ANALYSIS FOR IC SYSTEM	176
2.1	Antennas	176
2.1.1	Design of the antennas installed in the Lower Hybrid (LH) port	180
2.1.2	Design of the antennas installed in the Remote Handling (RH) port	181
2.2	Transmission lines, tuning and matching circuitry	181

2.3	RF power units	186
2.4	Remote maintenance	188
2.5	Interface with other systems	188
2.5.1	IC system interface requirements	188
2.5.2	Impact of FWCD on breeding ratio	189
3.	CONCLUSIONS, RECOMMENDATIONS, R&D NEEDS	190
3.1	Conclusions on the suitability for current drive, heating, and burn control	190
3.2	R&D needed	191
3.2.1	Physics	191
3.2.2	Technology	192
4.	HIGH FREQUENCY HEATING SYSTEM DESIGN	193
4.1	Engineering design	193
4.1.1	Overall description	193
4.1.2	Launcher	197
4.1.3	Faraday screen	202
4.1.4	Ridged waveguide	202
4.1.5	Power handling capability of the launcher	203
4.1.6	Remote maintenance	203
4.1.7	Generator description and system efficiency	205
4.2	Conclusions and recommendations for the high frequency heating system	206
