Contents

	Foreword to the Japanese edition	ix
	Foreword to the English edition	xi
1	**Fundamentals of nuclear fusion**	1
1.1	The energy problem and nuclear fusion	1
1.1.1	*Energy and human societies*	1
1.1.2	*Energy in classical mechanics*	4
1.1.3	*Chemical energy*	5
1.1.4	*Atomic energy*	6
1.1.5	*The Coulomb force and the nuclear force*	6
1.1.6	*The nuclear fission reaction*	9
1.1.7	*Energy from nuclear fusion*	10
1.2	The nuclear fusion reaction	12
1.2.1	*Thermal motion*	12
1.2.2	*The equilibrium distribution function*	13
1.2.3	*The tunnel effect*	14
1.2.4	*Cross-sectional area and mean free path*	14
1.2.5	*Important fusion reactions*	15
1.2.6	*Energy in fusion reactions*	17
1.2.7	*Advanced fusion reactions*	18
1.3	The Lawson criterion	18
1.3.1	*Heating of plasma by fusion reactions*	18
1.3.2	*Bremsstrahlung*	19
1.3.3	*Self-ignition temperature*	21
1.3.4	*The Lawson criterion*	22
1.3.5	*Confinement of plasma*	24
2	**The magnetic confinement method**	25
2.1	The fundamentals of the magnetic confinement method	25
2.1.1	*The motion of charged particles in magnetic fields*	25
	Cyclotron motion	25
	Drift motion due to electric fields	27

	Drift motion due to gravity	29
	Drift motion due to curvature of the magnetic field	29
	Motion due to the gradient of the magnetic field	30
	Motion due to divergence of the magnetic field	30
2.1.2	*Maxwell stress and pinch motion*	32
2.1.3	*Sausage-type instability*	36
2.1.4	*Kink-type instability*	38
2.1.5	*Spiral instability*	42
2.1.6	*The β-value*	43
2.2	The Tokomak	43
2.2.1	*Structure of the Tokomak*	43
2.2.2	*Electrical conductivity of plasma*	45
2.2.3	*Neutral-beam heating*	50
2.2.4	*Wave heating*	52
2.2.5	*Safety factors and the rotational transfer angle*	55
2.2.6	*Diffusion of plasma*	58
2.2.7	*Instabilities in the Tokomak plasma*	65
2.2.8	*The present state of Tokomak research*	70
2.3	Magnetic-confinement fusion using devices other than the Tokomak	70
2.3.1	*Reversed-field pinch*	70
2.3.2	*The stellarator and the heliotron*	72
2.3.3	*The Miller field*	73
2.3.4	*The cusp field*	74
2.3.5	*The baseball field*	77
2.3.6	*The bumpy torus*	78
2.3.7	*The compact torus*	78
2.3.8	*The theta-pinch machine*	79
2.3.9	*The z-pinch machine*	83
2.3.10	*The plasma focus*	84
3	**The inertial confinement method**	85
3.1	The fundamentals of the inertial confinement method	85
3.1.1	*The Lawson criterion*	85
3.1.2	*Compression of fuel*	88
3.2	Absorption of laser light	91
3.2.1	*Plasma oscillation*	91
3.2.2	*Propagation of electromagnetic waves in plasma*	94
3.2.3	*Classical absorption*	96
3.2.4	*Parametric instability*	99
3.2.5	*Resonance absorption*	108
3.2.6	*Laser light of short wavelength*	112
3.3	Implosion of the target	113

3.3.1	*The hydrodynamics of implosion*	113
3.3.2	*The Rayleigh–Taylor instability*	117
3.4	Lasers	121
3.4.1	*Inverse population and stimulated emission*	121
3.4.2	*The neodymium glass laser*	125
3.4.3	*The carbon dioxide laser*	128
3.4.4	*The iodine laser*	130
3.4.5	*The hydrogen fluoride laser*	131
3.4.6	*The excimer laser*	132
3.4.7	*The free-electron laser*	133
3.4.8	*Experimental research facilities for laser fusion*	134
3.5	Electron beams	136
3.5.1	*Relativistic electron beams*	136
3.5.2	*The Marx generator*	137
3.5.3	*Intermediate storage capacitors and the pulse-forming line*	138
3.5.4	*The impedance conversion line and the plasma-erosion opening switch*	139
3.5.5	*The diode*	140
3.5.6	*Propagation of relativistic electron beams*	142
3.5.7	*Coulomb scattering of the beam at the target*	143
3.5.8	*Abnormal interaction of the beam with the target*	145
3.6	The light-ion beam	147
3.6.1	*Characteristics of the beam*	147
3.6.2	*Generation of the beam*	148
3.6.3	*Magnetically-insulated transmission lines*	150
3.6.4	*Propagation of the beam*	155
3.6.5	*Interaction of the beam with the target*	163
3.7	The heavy-ion beam and projectile	167
3.7.1	*The heavy-ion beam*	167
3.7.2	*The projectile*	169
4	**The fusion reactor**	171
4.1	The structure of the fusion power reactor	171
4.1.1	*The concept of the fusion power reactor*	171
4.1.2	*The central plasma*	175
	Heating the plasma	175
	Supply of fuel	175
	The particle balance and burn fraction	177
4.1.3	*The first wall*	178
	The wall loading	178
	Wall damage by atoms	179
	Plasma contamination and protection	182
	Wall damage by neutrons	185

4.1.4	*The blanket shield layer*	187
	The fuel cycle	187
	The tritium breeder and coolant	188
4.1.5	*The superconducting magnet*	191
	Coils for high-energy and high-intensity magnetic fields	191
	The structure and support of the electromagnetic force	194
	Pulse operation	194
	Radiation damage	194
	Remote handling	195
4.2	Design of fusion power plant	196
4.2.1	*Design of fusion power plant of the Tokomak type*	196
	An example of the design	196
	The power density and wall loading	197
	The toroidal magnet	199
	Steps toward the development of the reactor	201
4.2.2	*Design of mirror-type fusion power plant*	202
4.3	Power reactors using inertial-confinement fusion	208
4.3.1	*Design of laser fusion power reactors*	208
	Characteristics of the power reactor for inertial-confinement fusion	208
	The solase-type laser fusion reactor	210
4.3.2	*The waterfall-type reactor for light-ion beam fusion*	212
4.4	Natural-resource requirements and safety of the fusion power reactor	217
4.4.1	*Natural resources required*	218
	Fuel resources	218
	Resource materials other than fuel	219
4.4.2	*Safety of the nuclear fusion power reactor*	219
	Safety problems related to nuclei	220
	Safety problems not related to nuclei	222
	Appendix	225
