

CONTENTS

Introduction by Prof. B. BRUNELLI	1
Opening Speech by R.F. POST : The Philosophy of Fusion Research	3
 I. THE "MIRROR" APPROACH	
U.S. Mirror Program	
T.K. FOWLER	17
Tandem Mirror Physics and TMX	
T.K. FOWLER	35
The Physics of Field Reversed Mirrors	
R.F. POST	53
The Mirror Fusion Test Facility	
R.F. POST	87
The Economic Significance of Q for Mirror Reactors	
R.W. WERNER	105
Tandem Mirror Reactors	
G.A. CARLSON	121
Field-Reversed Mirror Reactor	
G.A. CARLSON	139
Toroidally Linked Mirrors	
C.J.H. WATSON	155
Beam Driven Bumpy Torus Reactor	
J.T. WOO	189
Mirror Hybrid Reactors	
R.W. MOIR, J.D. LEE	191
Beam and Plasma Direct Converters	
R.W. MOIR	217
Superconducting Magnets for Mirror Machines	
G.A. CARLSON	237
 II. THE "TWO COMPONENT TOKAMAKS" APPROACH	
Physics of the Two Component and Hot Ion Tokamaks	
J.G. CORDEY	253
TFTR Status Report	
P.J. REARDON	267

Plasma Parametric Studies and Potential Applications of Driven Fusion Reactors R.W. CONN	297
Neutral Beam Injectors F.P.G. VALCKX	347
III. POSSIBLE ROLES OF LOW Q FUSION DEVICES	
Non-Electric Fusion Energy Applications S.L. BOGART	371
A Global Approach to Fuel Cycles ? U. FARINELLI	403
Hybrids as Fuel Factories R.W. WERNER	423
The Hybrids in the Energy Strategies S.L. BOGART, R. CARRUTHERS, Y. SEKI	435 441 449
Round Table on Hybrids Summary by U. FARINELLI	463
List of Participants	475
