

## CONTENTS

Title	Author	Page
PREFACE	G. Casini	1
Basic Principles of Fusion Power	H. Knoepfel	3
The Tokamak Concept and Its Physics	H. Knoepfel	27
Magnetic Field Evaluations	S. Bobbio	59
Electromagnetic Systems	S. Bobbio	79
Additional Heating at Reactor Level	M. Haegi	99
The Large Tokamaks	E. Bertolini	131
The JET Project	P.H. Rebut, B.J. Green	187
Power Supply Requirements for Large Toroidal Fusion Experiments and Future Fusion Reactors	E. Bertolini	221
First Wall and Blanket Problems in Fusion Power Reactors	G. Casini	283
Technology of Superconducting Magnets for Magnetic Confinement Systems in Thermonuclear Fusion	P. Komarek	325
The Fuel Cycle of Fusion Reactors	J. Darvas	373
Remote Operations and Fusion Reactor Design	J. T. D. Mitchell	397
Systems Integration	F. Farfaletti- Casali	425
The NET Experimental Reactor	R. Toschi	479

Title	Author	Page
A Review of Some Important Engineering Problems of Mirror Fusion Reactors	M. A. Hoffman	511
A Review of Some Important Inertial Confinement Fusion Reactor Concepts	M. A. Hoffman	561
Safety and Environmental Aspects	P. Rocco	607
