

CONTENTS

FUSION PROGRAMMES

The USSR programme of fusion technology and design of magnetic plasma confinement reactors (IAEA-TC-392.3/1)	3
<i>V.A. Glukhikh</i>	
Present status and future plan of fusion research and development in Japan (IAEA-TC-392.3/2)	21
<i>K. Tomabechi</i>	
Overview of the United States fusion technology program (IAEA-TC-392.3/3)	33
<i>M.A. Abdou, P. Stone</i>	

TOKAMAKS

The JET project: Technical and scientific achievements and development towards deuterium-tritium operation (Extended Abstract) (IAEA-TC-392.3/4)	75
<i>E. Bertolini</i>	
Status of T-15 construction (IAEA-TC-392.3/5)	77
<i>V.A. Glukhikh, I.F. Malyshev, N.A. Monoszon, A.I. Kostenko, G.F. Churakov, B.B. Kadomtsev, V.S. Strelkov, B.A. Stavisskij, D.P. Ivanov, N.A. Chernoplekov</i>	
Fusion experimental reactor (FER) design concept (IAEA-TC-392.3/6)	93
<i>T. Tone, FER Design Team</i>	
The NET project (IAEA-TC-392.3/7)	117
<i>R. Toschi</i>	
OTR-experimental fusion-fission tokamak-reactor concept (IAEA-TC-392.3/8)	131
<i>B.B. Kadomtsev, B.N. Kolbasov, V.V. Orlov, V.I. Pistunovich, I.V. Altovskij, G.E. Shatalov, V.A. Glukhikh, N.A. Monoszon, Yu.N. Nekrylov, I.Ya. Emel'yanov, V.V. Gur'ev, A.S. Nikiforov, Z.V. Ershova</i>	
Tokamak concept innovations (IAEA-TC-392.3/9)	143
<i>G. Grieger</i>	
Design and main engineering characteristics of fusion test reactor (OTR) (IAEA-TC-392.3/10)	155
<i>V.A. Glukhikh, G.A. Baranov, L.B. Dinaburg, V.G. Karasev, A.I. Kostenko, R.N. Litunovskij, N.A. Monoszon, Yu.N. Nekrylov, I.M. Roife, G.L. Saksaganskij, A.M. Stolov, G.V. Trokhachev, O.G. Filatov, G.F. Churakov, V.N. Odintsov, B.B. Kadomtsev, V.V. Orlov, V.I. Pistunovich, I.Ya. Emel'yanov, V.V. Gur'ev, B.D. Gornostaev, A.S. Nikiforov, Z.V. Ershova</i>	

The NET machine system integration and basic layout (IAEA-TC-392.3/11)	169
<i>F. Casci, F. Farfaletti-Casali, G. Malavasi, N. Mitchell, R. Pöhlchen, E. Salpietro</i>	
Hybrid toroidal magnet configurations for next generation tokamak reactors (IAEA-TC-392.3/12)	187
<i>F. Rosatelli, M. Grattarola, M. Pizzuto, V. Zampaglione</i>	
High field tokamak reactors (IAEA-TC-392.3/13)	211
<i>L. Bromberg, D.R. Cohn</i>	
Operational limits of an inertial cooled compact ignition experiment (IAEA-TC-392.3/14)	231
<i>A. Angelini, B. Coppi, A. Koch, L. Lanzavecchia, G. Volta</i>	
A review of tokamak power reactor and blanket designs in the United States of America (IAEA-TC-392.3/15)	247
<i>C. Baker, J. Brooks, D. Ehst, Y. Gohar, D. Smith, D. Sze</i>	
Directions for improved fusion reactors (IAEA-TC-392.3/16)	265
<i>R. A. Krakowski, R.L. Miller, J.G. Delene</i>	
Reactors beyond NET (IAEA-TC-392.3/17)	285
<i>W.R. Spears</i>	
The aspects of the process equipment arrangement of a pilot-industrial fusion reactor (IAEA-TC-392.3/18)	303
<i>V.A. Ivanov, O.V. Rublev</i>	

NON-TOKAMAK REACTORS AND OPEN SYSTEMS

Compact reversed-field pinch reactors (CRFPR) (IAEA-TC-392.3/19)	313
<i>R.A. Krakowski, R.L. Miller, C.G. Bathke, R.L. Hagenson, C. Copenhaver, K.A. Werley</i>	
General design of a modular stellarator reactor (IAEA-TC-392.3/20)	333
<i>J. Hübener, W. Maurer</i>	
Advanced stellarator reactor and burner studies (IAEA-TC-392.3/21)	341
<i>G. Grieger, E. Harmeyer, J. Kisslinger, F. Rau, H. Wobig</i>	
Engineering consideration of modular coils for ASRA6C, an advanced stellarator reactor (IAEA-TC-392.3/22)	361
<i>E. Harmeyer, J. Kisslinger, F. Rau, H. Wobig</i>	
Magnetic field studies for advanced stellarator reactors (IAEA-TC-392.3/23)	375
<i>E. Harmeyer, F. Herrnegger, J. Kisslinger, F. Rau, H. Wobig</i>	
Fundamental conceptions of a reactor-torsatron with an additional longitudinal field (IAEA-TC-392.3/24)	393
<i>E.D. Volkov, A.V. Georgievskij, Yu.K. Kuznetsov, Yu.A. Litvinenko, O.S. Pavlichenko, V.A. Rudakov, Yu.F. Sergeev</i>	

Design of a conductor for a superconducting coil of a modular stellarator reactor (IAEA-TC-392.3/25)	403
<i>W. Maurer</i>	
Reactor aspects of the compact toroid based thermonuclear system (IAEA-TC-392.3/26)	413
<i>V.A. Burtsev, V.M. Kozhevnikov, A.N. Makhan'kov</i>	
Advances in tandem mirror fusion power reactors (IAEA-TC-392.3/27)	423
<i>L.J. Perkins, B.G. Logan</i>	

INERTIAL CONFINEMENT CONCEPTS

Progress in the ICF program at the Lawrence Livermore National Laboratory (IAEA-TC-392.3/28)	441
<i>W.J. Hogan</i>	
Overview of the United States heavy-ion fusion commercial electric power systems assessment project (IAEA-TC-392.3/29)	457
<i>D.J. Dudziak, J.H. Pendergrass, W.W. Saylor</i>	
SIRIUS-M: A symmetric illumination, inertially confined direct drive materials test facility (IAEA-TC-392.3/30)	477
<i>S.I. Abdel-Khalik, H. Attaya, R.L. Engelstad, G.L. Kulcinski, J.H. Liang, E.G. Lovell, G.A. Moses, R.R. Peterson, M.E. Sawan, I.N. Sviatoslavsky, L. Wittenberg</i>	
The Cascade ICF power reactor (IAEA-TC-392.3/31)	495
<i>W.J. Hogan, J.H. Pitts</i>	
Comparative analysis of inertial confinement fusion reactor (IAEA-TC-392.3/32)	509
<i>Yu.K. Kalmykov, A.V. Komin, M.V. Krivosheev</i>	

FISSION-FUSION HYBRIDS

Fusion-fission hybrid studies in the United States of America (IAEA-TC-392.3/33)	527
<i>R.W. Moir, J.D. Lee, D.H. Berwald, E.T. Cheng, J.G. Delene, D.L. Jassby</i>	
A feasible role of hybrid fusion reactors in the future Soviet Union energetics (IAEA-TC-392.3/34)	549
<i>V.L. Lokshin, A.V. Nedospasov, N.N. Vasil'ev</i>	
A suppressed-fission ICF hybrid reactor (IAEA-TC-392.3/35)	555
<i>W.J. Hogan, W.R. Meier</i>	
Feasibility of direct enrichment of fission reactor fuel elements in a fusion reactor blanket (IAEA-TC-392.3/36)	569
<i>V.V. Deriglazov, N.E. Polikhovskaya, G.E. Shatalov</i>
