Summary and Conclusions	S- 1
Background Comments	S- 2
Workshop Agenda	S- 3
Synopsis of Presentations	S- 5
List of Attendees	S-25
Introductory Remarks	1
Structural Analyses Techniques in Current Use for MSFE Magnet Designs	3
Recent Experimental Fusion Reactor Magnet Designs	5
Oak Ridge National Laboratory (W. Chris Stoddart)	5
Argonne National Laboratory (Larry Turner)	43
General Atomic Company (Robert Thomas)	89
Lawrence Livermore Laboratory (Steve Sackett)	117
Long Term Magnet Designs	135
University of Wisconsin (Warren Young)	135
Princeton University (Sam Gralnick, James Bialek)	171
TFTR Structural Analysis Methods	
(Grey Smith, EBASCO/Grumman)	201
National MFE Computer Network - Goals and Future Requirements (Glenn Ingram - DMFE)	227
Evaluation of Existing and Future Structural Analysis Techniques and Their Application to Superconducting Magnets (M. Reich-BNL)	239
Application of Composite Theory to Heterogeneous Magnet Structures (T. Y. Chang, U. of Akron - BNL Consultant)	277
Thermal Diffusion Analysis Consistent with Special Composite Structural Element Analysis (Jerome Conner, MIT-BNL Consultant)	303

Material Characterization from Fracture Mechanics Viewpoint (Steve Floreen-BNL Consultant)	313
Fracture Mechanics and Design Criteria for Low Temperature Applications (H. T. McHenry-NBS)	335
Feasibility of Construction (Ken Reinschmidt-Stone & Webster)	361
Buckling and Coupled Lateral Vibration Problems of Super- conducting Magnets (Francis C. Moon-Cornell U.)	377
Structural Standards and Design Requirements (E.P. Esztergar- BNL Consultant)	393
Open Discussion Sessions	435
