I. INTRODUCTION	I
1.1. Electric stress and electric strength	I
1.2. Breakdown mechanisms	I
1.2.1. Breakdown in gases and vacuum	I
1.2.2. Breakdown in liquids	2
1.2.3. Breakdown in solids	3
1.2.3.1. Electromechanical breakdown	3
1.2.3.2. Breakdown due to discharges	3
1.2.3.3. Thermal and chemical failure	4
1.2.3.4. Surface breakdown	4
1.3. Estimation and control of electric stress	5
1.4. Field sketching	8
1.4.1. Effect of asymmetry	11
1.4.2. Stress control	11
1.4.3. Mixed dielectrics	12
1.4.4. Bushings	13
1.5. High-voltage measurement	14
1.5.1. Spark gaps	15
1.5.2. Circuit elements	15
1.5.3. Electrostatic instruments	15
1.6. References	16
2. MECHANISMS OF SPARK BREAKDOWN IN GASES	17
2.1. Basic processes in gas breakdown	17
2.1.1. Generation of electron avalanches—primary process	17
2.1.2. Avalanches with successors—secondary processes	20
2.2. Mechanisms of breakdown	22
2.2.1. Townsend mechanism	23
2.2.1.1. Derivation of Townsend current growth equations	24
2.2.1.2. Townsend criterion for spark breakdown	25
2.2.1.3. Experimental determination of α and γ (using eqn (2))	27

CONTENTS

2.2.2. Streamer (Kanal) mechanisms	28
2.2.3. Some general comments	32
2.3. Breakdown in electronegative gases	34
2.4. Time lags of spark breakdown	36
2.4.1. Statistical time lags	37
2.4.2. Formative time lags	38
2.4.3. Practical implications	41
2.5. Acknowledgements	41
2.6. References	41
2.7. Appendix	42
3. BREAKDOWN CHARACTERISTICS IN GASES	45
3.1. Phenomena in uniform fields	45
3.1.1. Paschen's law	45
3.1.2. Phenomena at high pressures	46
3.1.3. Temperature effects	47
3.1.4. Breakdown characteristics	47
3.2. Phenomena in non-uniform fields	49
3.3. Surface flashover	54
3.3.1. Imperfection of shape	54
3.3.2. Effect of moisture	55
3.3.3. Heavy pollution	55
3.4. Dielectric recovery	56
3.5. References	57
4. THE ELECTRICAL PROPERTIES OF HIGH VACUUM	59
4.1. Introduction	59
4.2. Pre-breakdown conduction	60
4.2.1. Steady currents	60
4.2.2. Microdischarges	60
4.3. Factors affecting the breakdown voltage	63
4.3.1. Electrode separation	64
4.3.2. Electrode effects	66
4.3.2.1. Conditioning	66
4.3.2.2. Material and surface finish	67
4.3.2.3. Surface contamination	68
4.3.2.4. Area and configuration	69
4.3.2.5. Temperature	70
4.3.3. Frequency of applied voltage	71
4.3.4. Pressure effects	72

CONTENTS

4.3.5. Time lags	73
4.3.6. External circuit	73
4.3.7. Recovery of the insulating property after a breakdown	74
4.3.8. Non-metallic electrodes and surface coatings	74
4.4. Breakdown hypotheses	74
4.4.1. Particle exchange hypotheses	75
4.4.1.1. Positive ion hypothesis	75
4.4.1.2. Positive ion-negative ion hypothesis	76
4.4.2. Electron beam hypotheses	76
4.4.2.1. Anode heating hypothesis	76
4.4.2.2. Cathode heating hypothesis	80
4.4.3. Clump hypothesis	82
4.4.4. Transition in the breakdown mechanism	85
4.5. Vacuum breakdown criterion	86
4.6. Flashover across solid insulators	88
4.7. Conclusions	91
4.8. Acknowledgements	92
4.9. References	92
5. ELECTRON EMISSION FROM METALLIC SURFACES	95
5.1. Introduction	95
5.2. Classical mechanisms of electron emission from metallic surfaces	95
5.2.1. Thermionic emission	98
5.2.2. Schottky emission	98
5.2.3. Field emission	99
5.3. Effect of surface protrusions	99
5.4. Comparison between theory and observation for electrodes nominally at room temperature	101
5.4.1. Measurements at high fields	101
5.4.2. Measurements at low fields	102
5.5. Theoretical explanations of electron emission at low applied fields	104
5.5.1. The effect of oxide films	104
5.5.2. Patch fields	105
5.5.3. Particles on the electrode surface	105
5.5.4. Hot spots	106
5.5.5. Temperature-corrected field emission	106
5.5.6. Microprojections	108
5.6. Conclusions	109
	ix

CONTENTS

5.7. Acknowledgements	109
5.8. References	109
6. THE ELECTRICAL CONDUCTION AND STRENGTH OF PURE LIQUIDS	111
6.1. Introduction	111
6.2. Pure liquids	111
6.3. Purification	112
6.4. Test cells	113
6.5. Natural conduction	114
6.6. Induced conduction	116
6.7. Process of conduction	118
6.7.1. Electrode processes	119
6.7.1.1. Cathode	119
6.7.1.2. Anode	119
6.8. Breakdown phenomena and electric strength of liquids	119
6.8.1. Technique	119
6.8.2. Typical values	120
6.8.3. Electrode effects with liquefied argon	124
6.9. Summary of breakdown processes	126
6.10. Conclusions	128
6.11. References	128
7. BREAKDOWN OF COMMERCIAL LIQUID AND LIQUID-SOLID DIELECTRICS	129
7.1. Breakdown of commercial liquids	129
7.1.1. Breakdown due to gaseous inclusions	130
7.1.2. Breakdown due to liquid globules	131
7.1.3. Breakdown due to solid particles	135
7.2. Breakdown of liquid-solid dielectrics	136
7.2.1. Deterioration due to internal discharges	137
7.2.2. Electrochemical deterioration	141
7.3. References	142
8. INTRINSIC AND RELATED FORMS OF BREAKDOWN IN SOLIDS	144
8.1. Introduction	144
8.2. The definition of intrinsic strength	146
8.3. Theories of intrinsic strength	147
8.4. The measurement of intrinsic strength	150
8.5. Comparison of theory with experiment	152

CONTENTS

8.6. Current problems in the measurement of intrinsic strength	155
8.7. References	156
9. TRACKING AND BREAKDOWN OF SOLIDS DUE TO DISCHARGES	158
9.1. Tracking	158
9.2. Low-voltage tests	160
9.3. Mean-voltage test	161
9.4. High-voltage test	161
9.5. Theory of tracking	162
9.6. Breakdown by discharges in solids	162
9.7. Discharge detection	166
9.8. References	169
10. THERMAL BREAKDOWN, CHEMICAL AND ELECTROCHEMICAL DETERIORATION	170
10.1. Introduction	170
10.2. Thermal breakdown	170
10.3. Chemical deterioration	174
10.3.1. Chemical instability	174
10.3.2. Oxidation	174
10.3.3. Hydrolysis	175
10.3.4. Leaching of chemically active substances	175
10.3.5. Incompatibility of materials	175
10.4. Electrochemical deterioration	176
10.4.1. The nature of electrochemical deterioration	176
10.4.2. Examples of electrochemical effects in insulation	177
10.4.2.1. Moisture present	177
10.4.2.2. Moisture absent	179
10.5. Conclusion	182
10.6. References	183
11. FIELD SKETCHING AS APPLIED TO ELECTRIC FIELD DESIGN PROBLEMS	184
11.1. Introduction	184
11.2. Basic principles	184
11.2.1. Plane geometry—one dielectric	185
11.2.2. Plane geometry—mixed dielectrics	187
11.2.3. Cylindrical geometry—one dielectric	189
11.2.4. Cylindrical geometry—mixed dielectrics	190

CONTENTS

11.3. High-voltage design problems	191
11.3.1. Parallel-plate transmission lines	191
11.3.2. Multiple transmission lines	192
11.3.3. Coaxial cable terminations	193
11.3.4. Low-inductance collector plates	194
11.4. Acknowledgements	195
11.5. Reference	195
12. EVALUATION OF ELECTRIC STRESS BY MEANS OF THE ELECTROLYTIC TANK	196
12.1. Introduction	196
12.2. Electrostatic analogues	197
12.2.1. Three-dimensional fields	197
12.2.2. Three-dimensional fields with circular symmetry	197
12.2.3. Two-dimensional fields	200
12.3. Plotting techniques and electric stress evaluation	200
12.3.1. Setting up plotting paper	200
12.3.2. Plotting of equipotentials	201
12.3.3. Electric stress evaluation	201
12.4. Accuracy	201
12.4.1. Error due to steps in tank base	201
12.4.2. Polarization and capacitive errors	202
12.4.3. Meniscus effects	203
12.4.4. Electrical interference	203
12.5. Design of tank and ancillary equipment	203
12.5.1. Tank	203
12.5.2. Electrolyte	203
12.5.3. Probe and carrier mechanisms	203
12.5.4. Power source	204
12.5.5. Null point detector	204
12.5.6. Electrolytic tank at Culham Laboratory	204
12.6. Acknowledgement	205
12.7. References	206
13. THE USE OF GASEOUS INSULATION IN HIGH-VOLTAGE CIRCUIT-BREAKERS	207
13.1. Introduction	207
13.2. Modern switchgear practice	208
13.3. Gas-filled equipment	209
13.3.1. Live-tank circuit-breakers	209
13.3.2. Dead-tank circuit-breakers	212

CONTENTS

13.3.3. Gas-filled current transformers	214
13.4. Practical gases for switchgear	215
13.4.1. Gases for circuit-breakers	216
13.4.2. Gases for current-transformers and busbars	219
13.5. Design data	220
13.5.1. Gas-filled bushing	221
13.5.2. Future requirements	225
13.6. Acknowledgements	226
13.7. References	226
14. HIGH-VOLTAGE BUSHINGS	228
14.1. Types of bushing	228
14.1.1. Non-condenser bushings	228
14.1.2. Condenser bushings	228
14.2. Bushing applications	232
14.2.1. Alternator bushings	232
14.2.2. Transformer bushings	232
14.2.3. Bushings for switchgear	233
14.2.4. Wall and roof bushings	239
14.2.5. Cable-end and joint-box bushings	239
14.3. Service conditions and specifications	239
14.3.1. Power-frequency voltages	239
14.3.2. Surges	240
14.4. Breakdown of bushings	240
14.4.1. S.r.b.p. bushings	240
14.4.2. Oil-impregnated paper bushings	242
14.5. Design of bushings	243
14.5.1. Air-end clearance	244
14.5.2. Oil-end clearance	245
14.5.3. Length of earth layer	245
14.5.4. Radial gradients and diameters	246
14.5.5. Equipotential layer positions	247
14.6. Testing of bushings	248
14.6.1. Power-factor/voltage test (power-frequency voltage)	248
14.6.2. Internal discharge tests	249
14.6.3. One-minute dry withstand test (power-frequency voltage)	250
14.6.4. Momentary dry withstand test (power-frequency voltage)	250
14.6.5. Wet withstand test (power-frequency voltage)	250

CONTENTS

	<i>Page</i>
14.6.6. Under-oil flashover or puncture withstand test (power-frequency voltage)	250
14.6.7. Thermal stability test	251
14.6.8. Visible discharge test (power-frequency voltage)	251
14.6.9. Full wave withstand test (impulse voltage)	252
14.6.10. Under-oil flashover or puncture withstand test (impulse voltage)	252
14.6.11. Chopped wave withstand test (impulse voltage)	252
14.6.12. Switching surge tests	252
14.6.13. Corrections for atmospheric conditions	253
14.7. References	253
15. THE INSULATION OF HIGH-VOLTAGE TRANSFORMERS	254
15.1. Introduction	254
15.1.1. Transformer insulation: basic requirements	254
15.1.2. Dielectric strength	256
15.1.3. Voltage conditions	258
15.2. Dielectric strength and dielectric field analysis	259
15.2.1. Tests, test conditions, and measurements	259
15.2.2. Partial discharges	262
15.2.3. Development testing	266
15.2.4. Field analysis approach	270
15.3. Transient overvoltages	280
15.3.1. Surge analysis	280
15.3.2. Methods of surge investigation	288
15.4. Basic insulation research	293
15.4.1. Behaviour of liquid dielectrics	293
15.4.2. Electrode surface phenomena	296
15.4.3. Gas evolution	298
