CHAPTER 1. ATOMIC AND NUCLEAR STRUCTURE AND REACTIONS . . . 1

1-1.	Introduction	1
1-2.	Atomic Structure	2
1-3.	The Structure of Heavy Atoms	4
1-4.	The Chemical Reaction	7
1-5.	Nuclear Equations	8
1-6.	Energy from Nuclear Reactions	11
1-7.	Nuclear Fusion and Fission	12
1-8.	Conversion and Breeding	15
1-9.	Energy from Fission and Fuel Burnup	15
1-10.	Radioactivity	17
1-11.	Decay Rates and Half-Lives	22
1-12.	Radioactive Chains	27
	Problems	28

CHAPTER 2. NEUTRONS AND THEIR INTERACTIONS . . . 31

2-1.	Introduction	31
2-2.	Neutron Energies	31
2-3.	Fission Neutrons	33
2-4.	Thermal Neutrons	34
2-5.	Nuclear Cross Sections	37
2-6.	Neutron Flux and Reaction Rates	41
2-7.	The Variation of Neutron Cross Sections With Neutron Energy	42
2-8.	The $1/V$ Region	46
2-9.	The Resonance Region	47
2-10.	The Fast-Neutron Region	49
	Problems	49

CHAPTER 3. NEUTRON FLUX DISTRIBUTION IN CORES . . . 52

3-1.	Introduction	52
3-2.	Neutron Conservation	52
3-3.	The Diffusion of Neutrons in Media	55
3-4.	Neutron Flux Distribution in Reactor Cores	57

3-5.	Reflectors and Their Effects	64
3-6.	The Temperature Coefficient of Reactivity	64
3-7.	The Unsteady State and Reactivity	67
3-8.	The Doppler Coefficient and Reactivity	68
3-9.	Void and Pressure Coefficients of Reactivity	69
	Problems	70

CHAPTER 4. REACTOR HEAT GENERATION . . . 73

4-1.	Introduction	73
4-2.	Heat Generation Rate in Fuel	73
4-3.	The Fission Energy in Reactors	74
4-4.	The Fissionable Fuel Density	77
4-5.	The Fission Cross Section in Reactors	80
4-6.	Heat Generated by a Single Fuel Element	88
4-7.	The Total Heat Generated in Core - General	90
4-8.	The Case of the Homogeneous Core	90
4-9.	The Case of the Heterogeneous Reactor with a Large Number of Fuel Elements	92
4-10.	Reactor Shutdown Heat Generation	94
4-11.	Heat Generation by Radioisotopes	98
	Problems	100

CHAPTER 5. HEAT CONDUCTION IN REACTOR ELEMENTS . . . 103

I. General and One-Dimensional Steady-State Cases

5-1.	Introduction	103
5-2.	General Assumptions	103
5-3.	The Heat Conduction Equations	106
5-4.	Heat Flow Out of Solid-Plate-Type Fuel Elements	112
5-5.	The Interdependence of Temperature, Heat Transfer, and Heat (or Neutron) Flux	118
5-6.	Heat Flow Out of Solid Cylindrical Fuel Elements	121
5-7.	Heat Flow Out of Hollow Thick Cylindrical Fuel Elements	125
5-8.	Heat Flow Out of Spherically Shaped Fuel	128
	Problems	129

CHAPTER 6. HEAT CONDUCTION IN REACTOR ELEMENTS . . . 131

II. Some Special One-Dimensional Steady-State Cases

6-1.	Introduction	131
6-2.	The Absorption of Core Radiations	131
6-3.	Heat Removal in Slabs Subjected to Radiation	135
6-4.	Thermal Shields	141
6-5.	Secondary Radiations	144

6-6.	Fins in Reactors	145
6-7.	Heat Transfer from Fins of Low Biot Numbers	148
6-8.	The Case of Fins of Constant Cross Sections	149
6-9.	Optimum and Triangular Fins	154
6-10.	The Case of Circumferential Fins of Constant Thickness	155
6-11.	Heat Transfer in Porous Elements	156
6-12.	The Special Case of the Poisson Equation with $q''' = f(t)$	163
6-13.	The Dependence of Material Properties on Temperature and Pressure	166
	Problems	167

CHAPTER 7. HEAT CONDUCTION IN REACTOR ELEMENTS . . . 171

III. Two-Dimensional Steady-State Cases

7-1.	Introduction	171
7-2.	Finite-Difference Techniques – General	172
7-3.	Transformation of the Poisson Equation	174
7-4.	Methods of Solutions	177
7-5.	Solution by Matrix Algebra	179
7-6.	Solution by Iteration	181
7-7.	Solution by the Relaxation Method	183
7-8.	Heat Conduction in Finite Difference Systems	186
7-9.	Nodal Points Near Curved Boundaries	187
7-10.	Nodal Points on Insulated Boundaries	189
7-11.	Nodal Points on a Boundary with a Surface Conductance h	190
7-12.	Nodal Points on a Boundary with Specified Heat Flux	192
7-13.	An Approximate Analytical Method	192
7-14.	Analogical Techniques	195
	Problems	197

CHAPTER 8. HEAT CONDUCTION IN REACTOR ELEMENTS . . . 200

IV. The Unsteady State

8-1.	Introduction	200
8-2.	The Lumped-Parameter Technique	200
8-3.	Time Constant and Temperature-Coefficient Effects	202
8-4.	Evaluation of Temperature Transients by Finite Differences	203
8-5.	Numerical Solution of a Two-Dimensional Transient Case	208
8-6.	Graphical Solution for a Plane Geometry and No Boundary Layer	210
8-7.	Graphical Solution with a Boundary Layer	214
8-8.	The Case of a Composite Wall	217
8-9.	Graphical Solution for Cylinders	218
8-10.	An Exact Analytical Method	221
	Problems	228

**CHAPTER 9. HEAT TRANSFER AND FLUID FLOW,
NONMETALLIC COOLANTS . . . 231
(Single Phase)**

9-1.	Introduction	231
9-2.	Heat Removal and Pumping Power	232
9-3.	Heat-Transfer Coefficients: General	236
9-4.	The Effect of the Prandtl Number on Convective Heat Transfer	238
9-5.	Convective Heat-Transfer Coefficients for Nonmetallic Coolants	243
9-6.	The Effect of Length and Shape of Coolant Channel	249
9-7.	The Effects of Axially Nonuniform Heat-Flux and Temperature Distributions	251
9-8.	The Effect of High Gas Velocity Problems	253
		257

CHAPTER 10. LIQUID METAL COOLANTS . . . 259

10-1.	Introduction	259
10-2.	Some General Considerations	260
10-3.	Induced Radioactivity in Liquid-Metal Coolants	261
10-4.	Liquid-Metal Compatibility with Materials	263
10-5.	Heat-Transfer Properties of Liquid Metals	265
10-6.	Heat-Transfer Correlations for Liquid Metals	267
10-7.	Effect of Axial Heat Diffusion	271
10-8.	Some Heat-Transfer Correlations of Liquid Metal Fluid Fuels	272
10-9.	The Heat-Transfer Mechanism in Fluid-Fuel Systems	273
10-10.	Liquid-Metal Pumps	279
10-11.	Direct-Current Pumps	280
10-12.	Some Design and Operational Problems of dc Pumps	285
10-13.	Alternating Current Pumps Problems	288
		289

CHAPTER 11. HEAT TRANSFER WITH CHANGE IN PHASE . . . 291

11-1.	Introduction	291
11-2.	Processes of Phase Change	291
11-3.	Bubble Formation, Growth and Detachment	293
11-4.	The Boiling Regimes	299
11-5.	The Boiling Crisis and Burnout	303
11-6.	Parametric Effects on Boiling and the Boiling Crisis	304
11-7.	Critical Heat-Flux Correlations for Water	308
11-8.	Critical Heat-Flux Correlations for Liquids Other Than Water	313
11-9.	Condensation Problems	316
		323

CHAPTER 12. TWO-PHASE FLOW . . . 325

12-1.	Introduction	325
12-2.	Quality and Void Fraction in an Nonflow System	326
12-3.	The Flow System	328
12-4.	Boiling and Nonboiling Heights	334
12-5.	The Friction Drop in a Two-Phase Channel	336
12-6.	The Acceleration Pressure Drop	344
12-7.	Two-Phase Flow Pressure Drop at Restrictions	346
12-8.	Pressure Rise Due to Sudden Expansion	347
12-9.	Pressure Drop Due to Sudden Contraction	350
12-10.	Two-Phase Flow in Orifices	352
12-11.	Critical Flow	354
12-12.	Single-Phase Critical Flow	356
12-13.	Two-Phase Critical Flow	358
12-14.	Two-Phase Critical Flow in Long Channels	359
12-15.	Two-Phase Critical Flow in Short Channels	363
	Problems	365

CHAPTER 13. CORE THERMAL DESIGN . . . 368

13-1.	Introduction	368
13-2.	General Considerations	369
13-3.	Axial Temperature Distributions of Fuel Element and Coolant	372
13-4.	Maximum Temperatures in Fuel Element	376
13-5.	Coolant-Channel Orificing	380
13-6.	Hot-Spot Factors	382
13-7.	Basic Statistical Relationships	386
13-8.	An Example of Determining a Hot-Spot Subfactor	390
13-9.	The Overall Hot-Spot Factor	393
13-10.	Core Thermal Design	397
	Problems	401

CHAPTER 14. THE BOILING CORE . . . 405

14-1.	Introduction	405
14-2.	Boiling-Reactor Flows	405
14-3.	Boiling-Reactor Mass and Heat Balance	407
14-4.	The Driving Pressure in a Boiling Channel	409
14-5.	The Average Density in a Boiling Channel	412
14-6.	The Chimney Effect	417
14-7.	The Multichannel Boiling Core	419
	Problems	423

APPENDIX A. ALPHABETICAL LIST OF THE ELEMENTS . . . 427

APPENDIX B. PARTIAL LIST OF THE ISOTOPES . . .	429
APPENDIX C. BESSEL FUNCTIONS . . .	453
APPENDIX D. SOME THERMODYNAMIC PROPERTIES . . .	459
APPENDIX E. SOME PHYSICAL PROPERTIES . . .	471
APPENDIX F. MOODY FRICTION FACTOR CHART . . .	475
APPENDIX G. SOME USEFUL CONSTANTS . . .	477
APPENDIX H. SOME CONVERSION FACTORS . . .	479
REFERENCES . . .	485
INDEX . . .	495
