

CONTENTS

CHAPTER 1: LARGE SCALE APPLICATIONS OF SUPERCONDUCTIVITY

J. Powell

INTRODUCTION	1
ENERGY GENERATION – FUSION	5
ENERGY GENERATION – MHD	22
ENERGY STORAGE – PEAKING POWER	34
ENERGY MODIFICATION – AC AND DC GENERATORS AND MOTORS	42
ENERGY TRANSMISSION	46
A. DC Transmission	50
B. AC Transmission	55
MAGNETIC LEVITATION – HIGH SPEED GROUND TRANSPORTATION	62
INDUSTRIAL PROCESSING	75

CHAPTER 2: PRACTICAL SUPERCONDUCTING MATERIALS

D. Dew-Hughes

INTRODUCTION	87
A. Applications of Type II Superconductors	87
B. Properties Required of Commercial Superconductors	89
THE CRITICAL TEMPERATURE	90
A. BCS Theory	90
B. Matthias Rules	91
C. A15 Compounds	92

x	CONTENTS
THE CRITICAL FIELD	95
A. Type II Superconductivity	95
B. Paramagnetic Limitation of Upper Critical Field	98
THE CRITICAL CURRENT	102
A. Introduction	102
B. Flux Flow	104
C. The Critical State	107
D. Microstructure and Flux Pinning	108
E. Mechanisms of Flux Pinning	110
F. Maximum Critical Currents	113
STABILITY	115
A. Introduction	115
B. Criteria for Propagation of Flux Jumps	116
C. Recovery	118
D. Techniques of Stabilization	119
AC LOSSES	121
FABRICATION OF SUPERCONDUCTING MATERIALS	122
A. Ductile Alloys	122
B. A15 Compounds	124
C. New Processes	125
COMMERCIAL SUPERCONDUCTING MATERIALS	126
FUTURE PROSPECTS	131
<hr/>	
CHAPTER 3: SUPERCONDUCTING MAGNETS	
H. Brechna	
INTRODUCTION	139
APPLICATIONS OF SUPERCONDUCTING MAGNETS	141
EXAMPLES OF OPERATING SUPERCONDUCTING MAGNETS	145
A. Oxford University Hybrid Magnet	151
B. The MIT Hybrid Magnet	151
C. The McGill University Hybrid Magnet	153
MAGNET SYSTEMS	153
A. Axially Symmetric Magnets	156
1. Short solenoids	158
2. Long solenoids	158
3. Multipole magnets	159
SUPERCONDUCTOR STABILIZATION	166

CONTENTS	xi
INDUCTIVE ENERGY STORAGE MAGNETS	171
MAGNETS FOR PULSED FIELD APPLICATIONS	179
A. Field Profiles in a Superconductor	182
B. Hysteretic Losses	185
C. Eddy Current Losses	186
D. Self-field Losses	188
E. Magnetic and Thermal Instabilities	190
F. Removal of Heat	194
COIL STRUCTURE AND PULSED MAGNET DESIGN	199
CONDUCTOR CONFIGURATIONS IN PULSED MAGNETS	205
EXPERIENCE WITH PULSED MAGNETS	211
<hr/>	
CHAPTER 4: SUPERCONDUCTING DC MACHINES	
A.D. Appleton	
BACKGROUND SITUATION	219
A. Cooling to the Limit	220
B. Early High Field Superconductors	221
C. Stabilized Superconductor	221
D. Intrinsically Stable Superconductor	223
E. Limitations of Conventional DC Machines	225
F. Limitations of Superconducting Homopolar Machines	228
BASIC DESIGN OF SUPERCONDUCTING DC MACHINES	230
A. Elimination of Iron Magnetic Circuits	230
B. Superconducting Heteropolar DC Machines	232
C. Superconducting Homopolar Machines	232
D. Calculation of the Magnetic Field	235
E. Geometry of Armature	238
F. The First Superconducting DC Machine	239
G. Preliminary Optimization Methods	241
PROBLEM AREAS	243
A. Low Voltage of Homopolar Machines	243
B. Current Collection	245
1. Solid brushes	245
2. Liquid metal current collection systems	247
3. Carbon fiber brushes	248
C. Magnetic Screening	251
FAWLEY MOTOR	252
A. Introduction	252
B. Some Design Considerations	253

C. The Design of the Fawley Motor	254
1. The superconducting winding	254
2. The cryostat	256
3. The rotor	262
4. The stator	262
5. The refrigerator	264
D. Tests at IRD	266
E. Tests at Fawley Power Station	268
APPLICATIONS AND FURTHER DEVELOPMENTS	269
A. Marine Propulsion	270
B. Steel Rolling Mills	271
C. Other Industrial Drives	272
D. Generators	273
E. Aluminum Smelting	273
F. Chlorine	274
G. Further Developments	276
<hr/>	
CHAPTER 5: APPLICATIONS OF SUPERCONDUCTIVITY TO AC ROTATING MACHINES J. L. Smith, Jr. and T. A. Keim	
INTRODUCTION	279
A. Comparison with Conventional Machines	279
B. Early Superconducting Machines	284
C. More Recent Machines	286
BASIC SYNCHRONOUS MACHINE THEORY	288
A. Voltage Equation	289
B. Power Equation	291
C. Conventions and Terminology	292
D. Another Power Equation	292
E. Transient Analysis	293
F. The Classical Transient Problem	294
G. Calculation of Air Core Reactances	295
EXPERIMENTAL MACHINES AT MIT	300
A. First Experimental Machine	300
B. Second Experimental Machine	303
THERMAL ISOLATION AND CRYOGENIC REFRIGERATOR	316
A. Gas Conduction and Radiation Heat Leak	317
B. Torque Tube and Mechanical Supports	317
C. Gas Cooled Supports	318

D. Designing the Refrigerator for the Superconducting Machine	322
E. Basic Refrigerator Design	324
F. Current State of the Art in Cryogenic Refrigeration	327
G. Refrigerator Development	328
PRESENT PROBLEMS, CURRENT DEVELOPMENTS AND FUTURE PROSPECTS	329
A. Introduction	329
B. Current Problems	329
C. Superconducting Field Winding	333
D. Excitation for the Superconducting Field Winding	336
E. Armature Winding and Structure	337
F. Plan of Action	337
G. New Concepts and Applications	338
<hr/>	
CHAPTER 6: HIGH SPEED MAGNETICALLY LEVITATED AND PROPELLED MASS GROUND TRANSPORTATION Y. Iwasa	
INTRODUCTION	347
STATE OF THE ART	350
A. New Tokaido Line	350
B. Fundamental Barriers to Conventional High Speed Ground Transportation	351
PRINCIPLES OF MAGNETIC LEVITATION	352
A. Magnetic Force	353
B. Attractive System	353
C. Repulsive System – General Theory	354
D. Theories of Lift and Drag Forces	357
1. Energy approach	357
2. Field approach	364
E. Experimental Techniques	365
PRINCIPLES OF LINEAR MOTOR PROPULSION	368
A. Basic Theory of Synchronous Propulsion	370
B. LSM Control System for a Model "Magneplane" Vehicle	374
OTHER IMPORTANT CONSIDERATIONS FOR REPULSIVE MAGNETIC LEVITATION SYSTEM	376
A. Ride Quality and Vehicle Dynamics	376

B. Cryogenics	378
C. Magnetic Shielding	381
1. DC shielding	381
2. AC losses in superconducting magnets	386
COST ESTIMATES FOR A MAGNEPLANE SYSTEM	387
A. The Northeast Corridor Traffic Forecast and Magneplane Characteristics	387
B. Capital Costs	388
1. Guideway	389
2. Guideway Power Supply System	391
C. Comparison with a TACV System	392
CURRENT STATUS OF NEW TRANSPORTATION SYSTEM RESEARCH AND DEVELOPMENT IN VARIOUS NATIONS	392
A. Japan	393
B. Germany	394
C. United States	395
D. France	396
E. Canada	396
CONCLUSIONS	396
<hr/>	
CHAPTER 7: TRANSMISSION OF ELECTRICAL ENERGY BY SUPERCONDUCTING CABLES G. Bogner	
INTRODUCTION	401
POWER TRANSMISSION SYSTEMS IN EXISTENCE AND IN PROCESS OF DEVELOPMENT	404
A. Overhead Lines	404
B. Underground High-Power Cables	408
1. Conventional ac high-voltage cables	408
2. Artificially-cooled impregnated paper oil-filled cables	412
3. High-voltage dc cables	414
4. SF ₆ - gas - spacer cables	414
5. Cables with plastic insulation	416
6. Sodium cables	417
7. Microwave power transmission	419
8. Cryogenic normal-conductor cables	421
A GENERAL COMPARISON BETWEEN SUPERCONDUCTING DC AND AC CABLES	425

SUPERCONDUCTING CABLE CONCEPTS	428
A. Mechanical Construction	428
B. Conductor Configurations	430
1. Three-phase conductor systems	430
2. DC conductor systems	434
3. Other cable concepts	436
CABLE CONDUCTORS	437
A. Superconductors	437
1. DC superconductors	437
2. AC superconductors	441
3. Experimentally determined ac losses	445
4. Measuring methods	448
5. Conductor losses of ac cables	449
B. Transient Behavior of Cable-Conductors	451
1. Stabilization of cable-conductors	451
2. Behavior of cable conductors under fault conditions	453
C. Conductor Configurations	457
ELECTRICAL INSULATION	460
A. Vacuum Insulation	461
B. Helium Insulation	466
C. Wound Foil Insulation in Helium or in Vacuum	471
D. General Aspects of Electrical Insulation and Test Methods	477
THERMAL INSULATION	478
A. Heat Sources	478
B. Methods for Reducing the Heat Inflow	478
1. Vacuum	478
2. Cooled intermediate shields -superinsulation	483
3. Pipe suspensions and spacers	486
C. Mechanical Construction	486
D. Thermal Losses of Different Designs	489
CABLE COOLING	489
A. Magnitude of Losses	490
B. Stationary Nitrogen Cooling Circuit	490
C. Stationary Helium Circuit	491
D. Transient Cooling	495
E. Refrigeration Requirements and Refrigerating Systems	498
CABLE JOINTS	503
A. Current and Voltage Leads	506

1. Optimizing the current supply leads in relation to losses	508
2. Resistance to fault currents	509
3. Dielectric strength of the supply lead	512
B. Termination Designs	514
METHODS OF LAYING VARIOUS TYPES OF CABLES	516
OPERATIONAL RELIABILITY AND MONITORING	518
CHARACTERISTIC DATA OF VARIOUS CABLE TYPES	521
A. Data of AC Cables	521
B. Data of DC Cables	527
ECONOMICS OF SUPERCONDUCTING CABLES	530
SUPERCONDUCTING CABLE PROJECTS	534
SUMMARY AND CONCLUSIONS	538
<hr/>	
CHAPTER 8: THE USE OF HYDROGEN AS AN ENERGY CARRIER	
C. Marchetti	
INTRODUCTION	549
HYDROGEN AS AN ENERGY VECTOR	550
A. Hydrogen Transportation	550
B. Hydrogen Storage	551
HYDROGEN USES	552
THE HYDROGEN ENERGY SYSTEM	553
EFFECT OF A HYDROGEN ENERGY SYSTEM ON THE ELECTRICAL SYSTEM	554
ISPRA WAY TO HYDROGEN	556
<hr/>	
CHAPTER 9: TUNNEL JUNCTIONS FOR COMPUTER APPLICATIONS	
J. Matisoo	
INTRODUCTION	563
BASIC PRINCIPLES	567
DEVICES AND TECHNOLOGY	569
LOGIC AND MEMORY CIRCUITS	575

SUMMARY	579
<hr/>	
CHAPTER 10: HIGH GRADIENT MAGNETIC SEPARATION: AN INDUSTRIAL APPLICATION OF MAGNETISM	
D. Kelland, H. Kolm, C. deLatour, E. Maxwell and J. Oberteuffer	
INTRODUCTION	581
PRINCIPLES OF HIGH GRADIENT MAGNETIC SEPARATION	584
THE CHARACTERISTICS OF HIGH GRADIENT MAGNETIC SEPARATION	586
HIGH GRADIENT MAGNETIC SEPARATION DEVICES	589
CONCLUSIONS	593
<hr/>	
CHAPTER 11: PROGRAMS ON LARGE SCALE APPLICATIONS OF SUPERCONDUCTIVITY IN FRANCE	
G. Bronca	
INTRODUCTION	595
THE SITUATION IN 1971	595
FUTURE PROGRAMS	596
A. Basic Research	596
B. Applications to Research Apparatus	596
C. Superconducting Alternators	597
D. Transmission Lines	598
E. Homopolar Machines	598
F. Other Applications	598
G. Conductor and Cryogenic Apparatus	599
CONCLUSIONS	599
<hr/>	
CHAPTER 12: PROGRAMS ON LARGE SCALE APPLICATIONS OF SUPERCONDUCTIVITY IN THE FEDERAL REPUBLIC OF GERMANY	
G. Bogner	
INTRODUCTION	601
SUPERCONDUCTING MATERIALS	602

MAGNETS FOR HIGH ENERGY AND PLASMA PHYSICS	604
A. DC Magnets for High Energy Physics	604
B. Pulsed Magnets for High Energy Physics	604
C. Magnets for Plasma Physics	605
MAGNETS FOR INDUSTRIAL AND SPECIAL APPLICATIONS	607
ROTATING ELECTRICAL MACHINERY	608
A. Superconducting Turbo-Alternators	608
B. Rotating Machinery for Propulsion Systems	608
ELECTRIC POWER TRANSMISSION	609
LAND TRANSPORTATION SYSTEMS	610
A. The Main Topics to be Worked on in Western Germany	610
B. The Inductive Levitation Technique	611
C. The Erlangen Facilities	613
HIGH FREQUENCY CAVITIES AND JOSEPHSON ELEMENTS	613
A. High Frequency Cavities	613
B. Josephson Elements	614
CONCLUSIONS	614
<hr/>	
CHAPTER 13: PROGRAMS ON LARGE SCALE APPLICATIONS OF SUPERCONDUCTING IN ITALY	
C. Rizzuto	
INTRODUCTION	615
CRYOGENICS	615
APPLIED SUPERCONDUCTIVITY	615
FUTURE RESEARCH	616
<hr/>	
CHAPTER 14: PROGRAMS ON LARGE SCALE APPLICATIONS OF SUPERCONDUCTIVITY IN JAPAN	
K. Yasukochi and T. Ogasawara	
INTRODUCTION	621
HISTORY OF THE LARGE SCALE APPLICATION OF SUPERCONDUCTIVITY IN JAPAN	621
CURRENT STATUS OF THE LARGE SCALE APPLICATION OF SUPERCONDUCTIVITY IN JAPAN	623
A. MHD Power Generation System	623

B. Superconducting Rotating Machines	624
C. Cryogenic Power Transmission System	624
D. Magnetically Levitated Transportation	625
E. Application for High Energy Physics	626
<hr/>	
CHAPTER 15: PROGRAMS ON LARGE SCALE APPLICATIONS OF SUPERCONDUCTIVITY IN SWITZERLAND	
T. Bratoljic and G. Meyer	
INTRODUCTION	635
PROGRAMS	635
<hr/>	
CHAPTER 16: PROGRAMS ON LARGE SCALE APPLICATIONS OF SUPERCONDUCTIVITY IN THE UNITED KINGDOM	
A. D. Appleton	
INTRODUCTION	639
THE ACTIVITIES OF THE SCIENCE RESEARCH COUNCIL	640
RESEARCH GRANTS TO UNIVERSITIES AND LABORATORIES	642
A. Oxford University	642
B. Leeds University	643
C. Nottingham University	644
D. Other Universities	644
E. Central Electricity Research Laboratories	644
1. Superconducting power transmission	644
F. International Research and Development	645
1. Superconducting dc machines	645
2. Superconducting ac generators	646
G. General Electric Company	646
H. Rutherford High Energy Laboratory	647
I. Other Activities	648
<hr/>	
CHAPTER 17: PROGRAMS ON LARGE SCALE APPLICATIONS OF SUPERCONDUCTIVITY IN THE UNITED STATES	
R. L. Powell, F. R. Fickett and B. W. Birmingham	
INTRODUCTION	651

A. Summary	651
B. Summary Tables	652
GENERATORS FOR ELECTRIC POWER SYSTEMS	653
ELECTRIC POWER TRANSMISSION	654
MACHINERY FOR PROPULSION SYSTEMS AND AUXILIARY POWER SUPPLIES	655
MAGNETS FOR ENERGY STORAGE, MAGNETOHYDRO- DYNAMIC (MHD) AND CONTROLLED THERMONUCLEAR REACTION (CTR) SYSTEMS	656
MAGNETS AND CAVITIES FOR HIGH ENERGY PHYSICS EXPERIMENTS	657
MAGNETS FOR INDUSTRIAL AND MEDICAL APPLICATIONS	658
LAND TRANSPORTATION SYSTEMS	659
<hr/>	
SUBJECT INDEX	677
