

CONTENTS

Introduction	1
PART I FREE WAVES William P. Allis and Solomon J. Buchsbaum	
1. General Properties of Waves in Anisotropic Media	7
1.1 The Material Equations	7
1.2 The Tensor Dielectric Coefficient	8
1.3 The Field Equations	10
1.4 The Dispersion Relation	11
1.5 Definition of Terms and Symbols	12
1.6 Cutoffs and Resonances	13
1.7 Polarization of the Waves	16
2. Particle Displacements in the Electric Field	18
2.1 The "Temperate" Plasma	18
2.2 Equations of Motion	19
2.3 The Tensor Components	21
2.4 The Dispersion Relation	23
2.5 Geometrical Representations	24
3. Phase Velocity Surfaces	27
3.1 Principal Waves along \mathbf{B}_0	27
3.2 Principal Waves across \mathbf{B}_0	30
3.3 The (α^2, β^2) Plane	32
3.4 Propagation in Arbitrary Directions	34
3.5 Waves with Stationary Ions	41
3.6 Quasi-Circular and Quasi-Plane Waves	42
3.7 The Quasi-Plane Approximation	45
3.8 Representation of the Index of Refraction on a $(n_{\parallel}^2, n_{\perp}^2)$ Diagram	48
4. Polarization	55
4.1 General Relations	55
4.2 The Quasi-Circular and Quasi-Plane Approximations	57
4.3 Resonance Currents	60
4.4 The Ion-Ion Hybrid Resonance	62
5. Transport Theory	64
5.1 Transport Equations	64
5.2 The Dielectric Tensor	65
5.3 Electron Plasma Waves along \mathbf{B}_0	66
5.4 Electron Plasma Waves across \mathbf{B}_0	68
5.5 Waves in Arbitrary Directions	70
5.6 Dispersion Equation for Coupled Electron and Ion Plasma Waves	73
5.7 Electron and Ion Plasma Waves along \mathbf{B}_0	75
5.8 Electron and Ion Plasma Waves across \mathbf{B}_0	76
5.9 Plasma Waves in Arbitrary Directions	77
6. Boltzmann Theory	86

PART II ENERGY-POWER THEOREMS AND GUIDED WAVES	
Abraham Bers	
7. Conservation Principles for Temperate Plasmas	95
7.1 Energy and Power	95
7.2 Sinusoidal Time Variation	96
7.3 Variation Theorem and Applications	100
7.3.1 Frequency Variation in a Plasma Resonator	100
7.3.2 Impedance Variation	101
7.4 Free Waves	103
7.5 Complex Waves	106
7.6 Guided Waves	109
8. Conservation Principles for Warm Plasmas	117
8.1 Energy and Power	117
8.2 Variation Theorem	120
8.3 Free Waves	121
8.4 Guided Waves	123
8.5 General Properties of Dispersive Media	126
9. Field Analysis of Plasma Waveguides	132
9.1 Longitudinally Magnetized, Inhomogeneous Plasma Waveguides	134
9.2 Free-Space Waveguide	138
9.3 Homogeneous, Isotropic Plasma Waveguides	142
9.3.1 Lossless Plasma	142
9.3.2 Lossy Plasma	144
9.4 Inhomogeneous, Isotropic Plasma Waveguides	148
9.4.1 Uniformity in One Transverse Dimension	149
9.4.2 Uniform Plasma	150
9.5 Longitudinally Magnetized, Homogeneous Plasma Waveguides	154
9.5.1 Characteristics of the Dispersion Relation	155
9.5.2 Cutoff Conditions and Fields	158
9.5.3 Resonance Conditions and Fields	161
9.5.4 Low-Frequency, Magnetohydrodynamic Regime	169
9.5.5 Summary and Energy and Power Relations (LMG)	173
9.5.6 Infinite Magnetic Fields	177
9.6 Transversely Magnetized, Inhomogeneous Plasma Waveguides	178
9.6.1 Transversely Magnetized, Rectangular Plasma Waveguide	179
9.6.2 Transversely Magnetized, Coaxial Plasma Waveguide	180
9.7 Transversely Magnetized, Homogeneous Plasma Waveguides	181
9.7.1 Transversely Magnetized, Homogeneous Plasma Waveguides with Uniformity along E_0	184
9.7.2 Transversely Magnetized, Homogeneous, Rectangular Plasma Waveguide	189
9.7.3 Cutoff Conditions and Fields	191
9.7.4 Resonance Conditions and Fields	195
9.7.5 Summary and Energy and Power Relations (TMG)	200
9.7.6 Infinite Magnetic Fields	204

10. Boundary-Value Problems and Approximate Techniques	207
10.1 Homogeneous, Isotropic Plasma Waveguides	207
10.2 Inhomogeneous, Isotropic Plasma Waveguide	210
10.2.1 Inhomogeneous, Plasma-Filled Waveguides	210
10.2.2 Homogeneous Plasma in Free Space or Partially Filled Plasma Waveguide	214
10.3 Homogeneous, Anisotropic Plasma Waveguides	222
10.3.1 Longitudinally Magnetized, Parallel-Plate Waveguide	223
10.3.2 Longitudinally Magnetized, Circular Waveguide	226
10.3.3 Transversely Magnetized Waveguides	229
10.4 Waveguides Partially Filled with a Homogeneous, Anisotropic Plasma	231
10.4.1 Surface Waves	231
10.4.2 Longitudinally Magnetized, Cylindrical Plasma Waveguide	236
10.5 Quasi-Static Solutions for Slow Waves	240
10.5.1 Equations for the Electric Fields	241
10.5.2 Dispersion Characteristics	243
10.5.3 The Magnetic Field and Power Flow	253
Appendix A Evaluation of Integrals for the Conductivity	255
Appendix B Expansion of the Dielectric Tensor for Low Temperatures	261
References	263
Selected Bibliography	267
Index	275
