

CONTENTS

Preface	iii
Notation	xi
Introduction	1
Part I Moving Superhigh-Frequency Discharges	19
1. General Information on Moving SHF Discharges: Mechanisms of Motion	21
1.1. Methods of Generation and Investigation: Idealized Structure of Moving Discharges	21
1.2. Classification of the Mechanisms of Motion	30
2. SHF Discharges Propagating in Waveguides in Molecular Gases	41
2.1. Model of Discharge Moving in the Air	41
2.2. The Results of Experimental Investigations at Pressures of 10^3 – 10^4 Pa	52
2.3. Analysis of the Mechanism of Discharge Motion in Molecular Gases at Pressures of 10^3 – 10^4 Pa	62
2.4. SHF-Discharge Moving in the Air at Atmospheric Pressure	69
3. SHF Discharges Propagating in Waveguides in Inert Gases	73
3.1. SHF Discharges Propagating as a Result of Resonance Radiation Diffusion	73
3.2. The Results of Experimental Investigations of SHF Discharges Moving in Argon at Pressures of 10^3 – 10^5 Pa	80
3.3. Analysis of the Mechanism of Discharge Motion in Inert Gases	88
3.4. Singularities and Mechanism of Motion of SHF Discharges in Helium	92
4. SHF Discharges Propagating along Electromagnetic Radiation Beam in Molecular Gases	97
4.1. Discharge in Air at Atmospheric Pressure	97
4.2. Discharge in Nitrogen	104

Part II Stationary SHF Discharges	111
5. Parameters of the Plasma of Stationary Equilibrium SHF Discharges	113
5.1. Basic Assumptions	113
5.2. Direct Current Analogy	113
5.3. Experimental Investigation of the Parameters of the Plasma of Equilibrium SHF Discharge in Nitrogen	122
5.4. SHF Discharge in Hydrogen	126
6. Stationary Nonequilibrium SHF Discharges in Inert Gases	131
6.1. Discharges at Low Pressure	131
6.2. Discharges in Helium at Atmospheric Pressure	133
6.3. Discharge in Argon-Hydrogen Mixture	136
6.4. Stationary Combined Discharge in Argon-Hydrogen Mixture	141
7. SHF Discharge in an External Magnetic Field	149
7.1. Stabilization of Moving SHF Discharge by an External Magnetic Field	149
7.2. Suppression of Corkscrew Instability of Arc Discharge by the SHF Field	156
Part III SHF Plasma Generator Engineering	165
8. Integral Electrodynamical Characteristics of SHF Plasma Generators	167
8.1. Basic Characteristics of Schemes of SHF Plasma Generators	167
8.2. Equivalent Circuits of SHF Plasma Generators	170
8.3. On the Stability of the Operating Mode of SHF Plasma Generators	177
9. Electric Fields and Energy Release in Plasma Column	183
9.1. Electromagnetic Wave Propagation in a Cylindrical Waveguide with Plasma Column	183
9.2. Electric Fields in a Plasma Column and the Peculiarities of Energy Input for Waves of Different Types	189

9.3. Experimental Investigations of Electric Fields in SHF Discharge	194
10. Fundamentals of Designing SHF Plasma Generators	199
10.1. Conditions for the Formation of Plasma Column in a Gas-Discharge Chamber	199
10.2. Comparison of Main Types of SHF Plasma Generators	263
10.3. Possibility of Developing High-Power SHF Plasma Generators	210
Part IV. Preparation of Ultradisperse Nitrides in the Plasma of SHF Discharge	215
11. Modern Methods of Synthesizing Nitrides	217
11.1. Solid- and Gas-Phase Reactions	217
11.2. Low-temperature Plasma in the Technology of Preparation of Nitrides	221
11.3. Thermodynamic Analysis of the Chloride Processes of Preparation of Nitrides	226
12. Technological Problems of Plasmochemical Synthesis of Nitrides	233
12.1. The Scheme of the Technological Process for the Preparation of Nitrides in the Plasma of SHF-Discharge	233
12.2. The Effect of Technological Characteristics of the Plasmochemical Process on the Dispersity of Nitride Powders	240
12.3. The Synthesis of Composite Nitrides in the Plasma of SHF Discharge	244
13. The Properties of Ultradisperse Nitride Powders	251
13.1. The Physical and Chemical Properties	251
13.2. The Technological Properties	256
References	265
Index	273
