Contents

Preface xvii

Chapter 1. INTRODUCTION
1. General Properties of Plasmas 1
1.1 Definition of a plasma 1
1.2 Plasma as the fourth state of matter 1
1.3 Plasma production 2
1.4 Particle interactions and collective effects 3
1.5 Some basic plasma phenomena 4
2. Criteria for the Definition of a Plasma 6
2.1 Macroscopic neutrality 6
2.2 Debye shielding 7
2.3 The plasma frequency 9
3. The Occurrence of Plasmas in Nature 11
3.1 The Sun and its atmosphere 13
3.2 The solar wind 13
3.3 The magnetosphere and the Van Allen radiation belts 14
3.4 The ionosphere 15
3.5 Plasmas beyond the solar system 17
4. Applications of Plasma Physics 17
4.1 Controlled thermonuclear fusion 17
4.2 The magnetohydrodynamic generator 22
4.3 Plasma propulsion 22
4.4 Other plasma devices 23
5. Theoretical Description of Plasma Phenomena 24
5.1 General considerations on a self-consistent formulation 25
5.2 Theoretical approaches 26
Problems 27

Chapter 2. CHARGED PARTICLE MOTION IN CONSTANT AND UNIFORM ELECTROMAGNETIC FIELDS
1. Introduction 33
2. Energy Conservation 34

3. Uniform Electrostatic Field 36
4. Uniform Magnetostatic Field 37
4.1 Formal solution of the equation of motion 37
4.2 Solution in Cartesian coordinates 42
4.3 Magnetic moment 46
4.4 Magnetization current 48
5. Uniform Electrostatic and Magnetostatic Fields 51
5.1 Formal solution of the equation of motion 51
5.2 Solution in Cartesian coordinates 55
6. Drift Due to an External Force 56
Problems 58

Chapter 3. CHARGED PARTICLE MOTION IN NONUNIFORM MAGNETOSTATIC FIELDS
1. Introduction 61
2. Spatial Variation of the Magnetic Field 63
2.1 Divergence terms 64
2.2 Gradient and curvature terms 66
2.3 Shear terms 68
3. Equation of Motion in the First Order Approximation 68
4. Average Force Over One Gyration Period 70
4.1 Parallel force 72
4.2 Perpendicular force 74
4.3 Total average force 75
5. Gradient Drift 75
6. Parallel Acceleration of the Guiding Center 77
6.1 Invariance of the orbital magnetic moment and magnetic flux 77
6.2 Magnetic mirror effect 79
6.3 The longitudinal adiabatic invariant 83
7. Curvature Drift 86
8. Combined Gradient-Curvature Drift 89
Problems 91

Chapter 4. CHARGED PARTICLE MOTION IN TIME-VARYING ELECTROMAGNETIC FIELDS
1. Introduction 97
2. Slowly Time-Varying Electric Field 97
2.1 Equation of motion and polarization drifts 97
2.2 Plasma dielectric constant 99

3. Electric Field with Arbitrary Time Variation 102
3.1 Solution of the equation of motion 102
3.2 Physical interpretation 104
3.3 Mobility dyad 107
3.4 Plasma conductivity dyad 108
3.5 Cyclotron resonance 109
4. Time-Varying Magnetic Field and Space Varying Electric Field 111
4.1 Equation of motion and adiabatic invariants 112
4.2 Magnetic heating of a plasma 116
5. Summary of Guiding Center Drifts and Current Densities 118
5.1 Guiding center drifts 118
5.2 Current densities 118
Problems 118

Chapter 5. ELEMENTS OF PLASMA KINETIC THEORY
1. Introduction 125
2. Phase Space 125
2.1 Single-particle phase space 126
2.2 Many-particle phase space 127
2.3 Volume elements 127
3. Distribution Function 129
4. Number Density and Average Velocity 130
5. The Boltzmann Equation 131
5.1 Collisionless Boltzmann equation 132
5.2 Jacobian of the transformation in phase space 135
5.3 Effects of particle interactions 137
6. Relaxation Model for the Collision Term 138
7. The Vlasov Equation 140
Problems 141

Chapter 6. AVERAGE VALUES AND MACROSCOPIC VARIABLES
1. Average Value of a Physical Quantity 145
2. Average Velocity and Peculiar Velocity 146
3. Flux 146
4. Particle Current Density 150
5. Momentum Flow Dyad or Tensor 151
6. Pressure Dyad 152
6.1 Concept of pressure 152

6.2 Force per unit area 153
6.3 Force per unit volume 155
6.4 Scalar pressure and absolute temperature 156
7. Heat Flow Vector 158
8. Heat Flow Triad 158
9. Total Energy Flux Triad 159
10.Higher Moments of the Distribution Function 161
Problems 162

Chapter 7. THE EQUILIBRIUM STATE
1. The Equilibrium State Distribution Function 165
1.1 The general principle of detailed balance and binary collisions 165
1.2 Summation invariants 167
1.3 Maxwell-Boltzmann distribution function 169
1.4 Determination of the constant coefficients 170
1.5 Local Maxwell-Boltzmann distribution function 173
2. The Most Probable Distribution 173
3. Mixture of Various Species of Particles 174
4. Properties of the Maxwell-Boltzmann Distribution Function 175
4.1 Distribution of a velocity component 175
4.2 Distribution of speeds 178
4.3 Mean values related to the molecular speeds 180
4.4 Distribution of thermal kinetic energy 183
4.5 Random particle flux 183
4.6 Kinetic pressure and heat flux 186
5. Equilibrium in the Presence of an External Force 186
6. Degree of Ionization in Equilibrium - The Saha Equation 189
Problems 193

Chapter 8. MACROSCOPIC TRANSPORT EQUATIONS
1. Moments of the Boltzmann Equation 198
2. General Transport Equation 199
3. Conservation of Mass 202
3.1 Derivation of the continuity equation 202
3.2 Derivation by the method of fluid dynamics 203
3.3 The collision term 204
4. Conservation of Momentum 205
4.1 Derivation of the equation of motion 205

4.2 The collision term 208
5. Conservation of Energy 209
5.1 Derivation of the energy transport equation 209
5.2 Physical interpretation 212
5.3 Simplifying approximations 213
6. The Cold Plasma Model 216
7. The Warm Plasma Model 217
Problems 218

Chapter 9. MACROSCOPIC EQUATIONS FOR A CONDUCTING FLUID
1. Macroscopic Variables for a Plasma as a Conducting Fluid 225
2. Continuity Equation 229
3. Equation of Motion 229
4. Energy Equation 231
5. Electrodynamic Equations for a Conducting Fluid 234
5.1 Maxwell curl equations 234
5.2 Conservation of electric charge 235
5.3 Generalized Ohm's Law 236
6. Simplified Magnetohydrodynamic Equations 241
Problems 243

Chapter 10. PLASMA CONDUCTIVITY AND DIFFUSION
1. Introduction 245
2. The Langevin Equation 245
3. Linearization of the Langevin Equation 247
4. DC Conductivity and Electron Mobility 249
4.1 Isotropic plasma 249
4.2 Anisotropic magnetoplasma 250
5. AC Conductivity and Electron Mobility 255
6. Conductivity with Ion Motion 256
7. The Plasma as a Dielectric Medium 257
8. Free Electron Diffusion 259
9. Electron Diffusion in a Magnetic Field 262
10.Ambipolar Diffusion 264
11.Diffusion in a Fully Ionized Plasma 269
Problems 271

Chapter 11. SOME BASIC PLASMA PHENOMENA
1. Electron Plasma Oscillations 279
2. The Debye Shielding Problem 283
3. Debye Shielding using the Vlasov Equation 288
4. Plasma Sheath 290
4.1 Physical mechanism 291
4.2 Electric potential on the wall 292
4.3 Inner structure of the plasma sheath 293
5. The Plasma Probe 300
Problems 303

Chapter 12. SIMPLE APPLICATIONS OF MAGNETOHYDRODYNAMICS
1. Fundamental Equations of Magnetohydrodynamics 311
1.1 Parker modified momentum equation 312
1.2 The double adiabatic equations of Chew, Goldberger and Low(CGL) 314
1.3 Special cases of the double adiabatic equations 317
1.4 Energy integral 319
2. Magnetic Viscosity and Reynolds Number 322
3. Diffusion of Magnetic Field Lines 324
4. Freezing of the Magnetic Field Lines to the Plasma 325
5. Magnetic Pressure 329
5.1 Concept of magnetic pressure 329
5.2 Isobaric surfaces 331
6. Plasma Confinement in a Magnetic Field 332
Problems 336

Chapter 13. THE PINCH EFFECT
1. Introduction 339
2. The Equilibrium Pinch 340
3. The Bennett Pinch 346
4. Dynamic Model of the Pinch 350
5. Instabilities in a Pinched Plasma Column 355
6. The Sausage Instability 357
7. The Kink Instability 360
8. Convex Field Configurations 361
Problems 362

Chapter 14. ELECTROMAGNETIC WAVES IN FREE SPACE
1. The Wave Equation 366
2. Solution in Plane Waves 367
3. Harmonic Waves 368
4. Polarization 371
5. Energy Flow 378
6. Wave Packets and Group Velocity 381
Problems 385

Chapter 15. MAGNETOHYDRODYNAMIC WAVES
1. Introduction 390
1.1 Alfvén waves 390
1.2 Magnetosonic waves 392
2. MHD Equations for a Compressible Nonviscous Conducting Fluid 394
2.1 Basic equations 394
2.2 Development of an equation for $\vec{u}_1$ 395
3. Propagation Perpendicular to the Magnetic Field 396
4. Propagation Parallel to the Magnetic Field 398
5. Propagation in an Arbitrary Direction 399
5.1 Pure Alfvén wave 401
5.2 Fast and slow MHD waves 402
5.3 Phase velocities 403
5.4 Wave normal surfaces 403
6. Effect of Displacement Current 405
6.1 Basic equations 407
6.2 Equation for $\vec{u}_1$ 407
6.3 Propagation across the magnetostatic field 408
6.4 Propagation along the magnetostatic field 408
7. Damping of MHD Waves 409
7.1 Alfvén waves 410
7.2 Sound waves 411
7.3 Magnetosonic waves 411
Problems 412

Chapter 16. WAVES IN COLD PLASMAS
1. Introduction 415
2. Basic Equations of Magnetoionic Theory 416
3. Plane Wave Solutions and Linearization 417

4. Wave Propagation in Isotropic Electron Plasmas 418
4.1 Derivation of the dispersion relation 418
4.2 Collisionless plasma 420
4.3 Time-averaged Poynting vector 422
4.4 The effect of collisions 425
5. Wave Propagation in Cold Magnetized Plasmas 428
5.1 Derivation of the dispersion relation 428
5.2 The Appleton - Hartree equation 433
6. Propagation Parallel to $\vec{B}$ 434
7. Propagation Perpendicular to $\vec{B}$ 439
8. Propagation at Arbitrary Directions 444
8.1 Resonances and reflection points 444
8.2 Wave normal surfaces 450
8.3 The CMA diagram 452
9. Some Special Wave Phenomena in Cold Plasmas 454
9.1 Atmospheric whistlers 454
9.2 Helicons 457
9.3 Faraday rotation 459
Problems 462

Chapter 17. WAVES IN WARM PLASMAS
1. Introduction 469
2. Waves in a Fully Ionized Isotropic Warm Plasma 469
2.1 Derivation of the equations for the electron and ion velocities 469
2.2 Longitudinal waves 471
2.3 Transverse wave 475
3. Basic Equations for Waves in a Warm Magnetoplasma 477
4. Waves in a Warm Electron Gas in a Magnetic Field 479
4.1 Derivation of the dispersion relation 479
4.2 Wave propagation along the magnetic field 480
4.3 Wave propagation normal to the magnetic field 483
4.4 Wave propagation in an arbitrary direction 487
5. Waves in a Fully Ionized Warm Magnetoplasma 488
5.1 Derivation of the dispersion relation 488
5.2 Wave propagation along the magnetic field 491
5.3 Wave propagation normal to the magnetic field 496
5.4 Wave propagation in an arbitrary direction 499

6. Summary 500
Problems 501

Chapter 18. WAVES IN HOT ISOTROPIC PLASMAS
1. Introduction 502
2. Basic Equations 502
3. General Results for a Plane Plasma Wave in a Hot Isotropic Plasma 503
3.1 Perturbation charge density and current density 504
3.2 Solution of the linearized Vlasov equation 505
3.3 Expression for the current density 507
3.4 Separation into the various modes 508
4. Electrostatic Longitudinal Wave in a Hot Isotropic Plasma 510
4.1 Development of the dispersion relation 510
4.2 Limiting case of a cold plasma 512
4.3 High phase velocity limit 513
4.4 Dispersion relation for Maxwellian distribution function 514
4.5 Landau damping 520
5. Transverse Wave in a Hot Isotropic Plasma 524
5.1 Development of the dispersion relation 524
5.2 Cold plasma result 525
5.3 Dispersion relation for Maxwellian distribution function 525
5.4 Landau damping of the transverse wave 525
6. The Two-Stream Instability 526
7. Summary 529
7.1 Longitudinal mode 529
7.2 Transverse mode 530
Problems 531

Chapter 19. WAVES IN HOT MAGNETIZED PLASMAS
1. Introduction 536
2. Wave Propagation Along the Magnetostatic Field in a Hot Plasma 536
2.1 Linearized Vlasov equation 537
2.2 Solution of the linearized Vlasov equation 537
2.3 Perturbation current density 543
2.4 Separation into the various modes 545
2.5 Longitudinal plasma wave 547
2.6 Transverse electromagnetic waves 548

2.7 Temporal damping of the transverse electromagnetic waves 551
2.8 Cyclotron damping of the right circularly polarized transverse wave 553
2.9 Instabilities in the right circularly polarized transverse wave 555
3. Wave Propagation Across the Magnetostatic Field in a Hot Plasma 557
3.1 Solution of the linearized Vlasov equation 558
3.2 Current density and the conductivity tensor 560
3.3 Evaluation of the integrals 563
3.4 Separation into the various modes 568
3.5 Dispersion relations 569
3.6 The quasistatic mode 570
3.7 The TEM mode 574
4. Summary 576
4.1 Propagation along $\vec{B}_0$ in hot magnetoplasmas 576
4.2 Propagation across $\vec{B}_0$ in hot magnetoplasmas 577
Problems 578

Chapter 20. PARTICLE INTERACTIONS IN PLASMAS
1. Introduction 584
2. Binary Collisions 585
3. Dynamics of Binary Collisions 590
4. Evaluation of χ for Some Special Cases 594
4.1 Two perfectly elastic hard spheres 594
4.2 Coulomb interaction potential 595
5. Cross Sections 598
5.1 Differential scattering cross section 598
5.2 Total scattering cross section 601
5.3 Momentum transfer cross section 601
6. Cross Sections for the Hard Sphere Model 603
6.1 Differential scattering cross section 603
6.2 Total scattering cross section 604
6.3 Momentum transfer cross section 604
7. Cross Sections for the Coulomb Potential Field 606
7.1 Differential scattering cross section 606
7.2 Total scattering cross section 606
7.3 Momentum transfer cross section 607

8. Effect of Screening of the Coulomb Potential 607
Problems 612

Chapter 21. THE BOLTZMANN AND THE FOKKER-PLANCK EQUATIONS
1. Introduction 616
2. The Boltzmann Equation 616
2.1 Derivation of the Boltzmann collision integral 616
2.2 Jacobian of the transformation 621
2.3 Assumptions in the derivation of the Boltzmann collision integral 623
2.4 Rate of change of a physical quantity as a result of collisions 625
3. The Boltzmann's H Function 626
3.1 Boltzmann's H theorem 627
3.2 Analysis of Boltzmann's H theorem 629
3.3 Maximum entropy or minimum H approach for deriving the equilibrium distribution function 632
3.4 Mixture of various species of particles 634
4. Boltzmann Collision Term for a Weakly Ionized Plasma 635
4.1 Spherical harmonic expansion of the distribution function 635
4.2 Approximate expression for the Boltzmann collision term 637
4.3 Rate of change of momentum due to collisions 640
5. The Fokker-Planck equation 640
5.1 Derivation of the Fokker-Planck collision term 641
5.2 The Fokker-Planck coefficients for Coulomb interactions 645
5.3 Application to electron-ion collisions 651
Problems 652

Chapter 22. TRANSPORT PROCESSES IN PLASMAS
1. Introduction 658
2. Electric Conductivity in a Nonmagnetized Plasma 658
2.1 Solution of Boltzmann equation 659
2.2 Electric current density and conductivity 660
2.3 Conductivity for Maxwellian distribution function 663
3. Electric Conductivity in a Magnetized Plasma 664
3.1 Solution of Boltzmann equation 665
3.2 Electric current density and conductivity 668
4. Free Diffusion 672
4.1 Perturbation distribution function 672

4.2 Particle flux 672
4.3 Free diffusion coefficient 673
5. Diffusion in a Magnetic Field 675
5.1 Solution of Boltzmann equation 675
5.2 Particle flux and diffusion coefficients 677
6. Heat Flow 680
6.1 General expression for the heat flow vector 681
6.2 Thermal conductivity for a constant kinetic pressure 681
6.3 Thermal conductivity for the adiabatic case 683
Problems 684

Appendix I USEFUL VECTOR RELATIONS 689

Appendix II USEFUL RELATIONS IN CARTESIAN AND IN CURVILINEAR COORDINATES 692

Appendix III PHYSICAL CONSTANTS (MKSA) 697

Appendix IV CONVERSION FACTORS FOR UNITS 698

Appendix V SOME IMPORTANT PLASMA PARAMETERS 699

Appendix VI APPROXIMATE MAGNITUDES IN SOME TYPICAL PLASMAS 702

Index 703
