

# Contents

<i>Chapter</i> 1.	Introduction	1
1.1	Nature and occurrence of plasmas	1
1.2	Controlled nuclear fusion	2
1.3	Fluid and kinetic descriptions of a plasma	4
1.4	The Debye length	6
<i>Chapter</i> 2.	Motion of a charged particle	8
2.1	Introduction	8
2.2	Motion in a uniform magnetic field	8
2.3	Guiding centre drifts	10
2.4	Adiabatic invariants: the magnetic moment	15
2.5	The magnetization current	18
2.6	Some applications	20
	Problems	25
<i>Chapter</i> 3.	Low-frequency phenomena	27
3.1	Introduction	27
3.2	Magnetohydrodynamics	27
3.3	MHD equilibria	30
3.4	Stability of MHD equilibria	32
3.5	MHD waves	43
3.6	Coulomb collisions	44
3.7	The Fokker–Plank equation	49
3.8	Relation between kinetic and fluid theories	54
3.9	Transport coefficients	56
	Problems	61
<i>Chapter</i> 4.	Waves	62
4.1	Introduction	62
4.2	The two-fluid equations	62
4.3	Waves in a cold plasma	65
4.4	Wave energy density	73
4.5	Waves in an inhomogeneous plasma	75
4.6	Cut-off and resonance	77
4.7	Propagation of electron cyclotron waves in a tokamak	80

vi	CONTENTS	
	4.8 Tunnelling and resonant absorption	84
	Problems	91
<i>Chapter</i>	5. Kinetic theory of waves	93
	5.1 Introduction	93
	5.2 The Vlasov equation	93
	5.3 The linearized Vlasov equation and Landau damping	95
	5.4 The plasma dispersion function	104
	5.5 Ion sound waves	106
	5.6 Waves in a magnetized plasma	107
	5.7 Bernstein modes	110
	5.8 Cyclotron damping	113
	5.9 Microinstabilities	114
	5.10 Absolute and convective instabilities	120
	Problems	122
<i>Chapter</i>	6. Nonlinear effects	124
	6.1 Introduction	124
	6.2 Quasilinear theory	124
	6.3 Wave-wave interactions	129
	6.4 Parametric instabilities	132
	6.5 The ponderomotive force	136
	6.6 Modulation and filamentation	138
	6.7 Computational methods—fluid codes	141
	6.8 Computational methods—particle codes	146
	6.9 Concluding remarks	149
	Problems	149
<i>Chapter</i>	7. Diagnostic techniques	150
	7.1 Introduction	150
	7.2 Probes	150
	7.3 Radiation emission	153
	7.4 Radiation scattering and interferometry	157
	7.5 Particle measurements	159
	Problems	160
<i>Chapter</i>	8. Application to fusion and space research	161
	8.1 Introduction	161
	8.2 Tokamaks and other toroidal devices	163
	8.3 Other magnetic confinement systems	166
	8.4 Inertial confinement	167
	8.5 The Earth's magnetosphere	171
	8.6 The physics of the Sun and stars	175
	8.7 Pulsars	179

	CONTENTS	vii
	8.8 Cosmic ray acceleration	181
	8.9 Plasma physics applied to particle accelerators	182
	8.10 Conclusion	184
	<i>Appendix: Singular integrals</i>	185
	Further reading	187
	Index	191
