

## CONTENTS

|   |     |
|---|-----|
| PREFACE . . . . .                             | vii |
| CHAPTER 1 CONCEPTS OF MAGNETOFLUIDMECHANICS   | 1   |
| 1.1 Introduction                              | 1   |
| 1.2 Coordinate System                         | 2   |
| 1.3 Applications                              | 4   |
| 1.4 Experimental and Diagnostic Techniques    | 14  |
| 1.5 Equations of Magnetofluidmechanics        | 18  |
| <i>References</i>                             | 20  |
| CHAPTER 2 UNITS AND DIMENSIONS . . . . .      | 23  |
| 2.1 Introduction                              | 23  |
| 2.2 The Choice of Units and Dimensions        | 25  |
| 2.3 The Factors $\epsilon_0$ and $\mu_0$      | 26  |
| 2.4 The MKSCK System                          | 27  |
| 2.5 The EMU and the ESU Systems               | 28  |
| 2.6 The Gaussian System of Units              | 29  |
| 2.7 Rationalized Units                        | 29  |
| <i>References</i>                             | 31  |
| CHAPTER 3 ELECTRICITY AND MAGNETISM . . . . . | 32  |
| 3.1 Introduction                              | 32  |
| 3.2 Electrically Charged Particles            | 32  |
| 3.3 Coulomb's Law                             | 34  |
| 3.4 Gauss' Law                                | 36  |
| 3.5 Magnetostatics                            | 38  |
| 3.6 Magnetic Fields Produced by Currents      | 40  |
| 3.7 Electromagnetism                          | 41  |
| 3.8 Conservation of Charge                    | 43  |
| 3.9 Maxwell's Equations                       | 44  |
| 3.10 The Velocity of Light                    | 47  |
| 3.11 Relaxation Time                          | 49  |
| 3.12 The Poynting Vector                      | 50  |
| 3.13 Ohm's Law                                | 52  |
| 3.14 Electromagnetic Force and Energy         | 53  |
| <i>References</i>                             | 55  |

|  |          |  |      |
| CHAPTER 4 PLASMA WAVE PHENOMENA . . . . .                  | 56       | 7.9 The Electrical Conductivity as a Tensor                            | 174  |
| 4.1 Introduction   | 56       | 7.10 Diffusion   | 180  |
| 4.2 Physical Concepts of Plasma Oscillations               | 57       | 7.11 Thermal Conductivity  | 182  |
| 4.3 The Wave Equation                                      | 62       | 7.12 Viscosity   | 184  |
| 4.4 Electrostatic Waves                                    | 63       | 7.13 Radiation from Plasmas  | 186  |
| 4.5 Electromagnetic Waves                                  | 64       | 7.14 Seeding   | 190  |
| 4.6 Electromagnetic Wave Propagation in Magnetic<br>Fields | 68       | <i>References</i>  | 191  |
| 4.7 Magnetohydrodynamic Waves                              | 77       |  |      |
| <i>References</i>  | 78       |  |      |
| CHAPTER 5 IONIZATION AND DEIONIZATION . . . . .            | 80       | CHAPTER 8 FLOW EQUATIONS OF MAGNETOFLUID-<br>MECHANICS . . . . .       | 196  |
| 5.1 Introduction   | 80       | 8.1 Introduction   | 196  |
| 5.2 Ionization   | 81       | 8.2 Coordinate Systems   | 197  |
| 5.3 Ionization Processes                                   | 89       | 8.3 The Convective Derivative  | 200  |
| 5.4 Neutralization Processes                               | 95       | 8.4 The Global Equation of Continuity                                  | 202  |
| 5.5 Relaxation Phenomena                                   | 97       | 8.5 The Species Continuity Equation                                    | 204  |
| <i>References</i>  | 102      | 8.6 The Global Momentum Equation                                       | 206  |
| CHAPTER 6 THERMODYNAMICS OF REAL GASES . . . . .           | 104      | 8.7 The Global Energy Equation   | 209  |
| 6.1 Introduction   | 104      | 8.8 The Conservation Equations Derived from the<br>Boltzmann Equation  | 213  |
| 6.2 Thermal Equation of State                              | 106      | 8.9 One-dimensional Magnetofluidmechanic Equations                     | 217  |
| 6.3 The Law of Mass Action                                 | 111      | <i>References</i>  | 221  |
| 6.4 Multiple Ionization                                    | 113      |  |      |
| 6.5 Partition Functions                                    | 115      | CHAPTER 9 APPLICATIONS OF MAGNETOFLUID-<br>MECHANICS . . . . .         | 222  |
| 6.6 Thermodynamic Functions                                | 119      | 9.1 Introduction   | 222  |
| 6.7 Saha's Equation  | 123      | 9.2 Interaction between Flow Field and Magnetic<br>Field               | 222  |
| 6.8 The Speed of Sound                                     | 125      | 9.3 Alfvén Waves   | 228  |
| 6.9 Caloric Equations of State                             | 131      | 9.4 Magnetoacoustic Waves  | 235  |
| 6.10 Applicability of Boltzmann Statistics                 | 139      | 9.5 Attenuation of Alfvén Waves  | 240  |
| 6.11 Approximate Equations of State                        | 142      | 9.6 Shock Waves  | 244  |
| 6.12 Plasma Temperature                                    | 143      | 9.7 Similarity Parameters of Magnetofluidmechanics                     | 248  |
| <i>References</i>  | 149      | 9.8 Potential Flow   | 260  |
| CHAPTER 7 TRANSPORT PHENOMENA . . . . .                    | 152      | 9.9 Boundary-layer Flow  | 262  |
| 7.1 Introduction   | 152      | 9.10 Couette and Poiseuille Flows                                      | 268  |
| 7.2 Forces between Particles                               | 154      | 9.11 Magnetogasdynamic Fanno Flow                                      | 270  |
| 7.3 The Concept of Carriers                                | 157      | 9.12 Magnetogasdynamic Rayleigh Flow                                   | 275  |
| 7.4 Coupled Transport                                      | 162      | 9.13 Classification of Magnetofluidmechanic Regimes                    | 278  |
| 7.5 The Boltzmann Equation                                 | 163      | 9.14 Applicability of Equations  | 280  |
| 7.6 The Evolution of Electrical Conductivity Expressions   | 165      | <i>References</i>  | 282  |
| 7.7 Electrical Conductivity—Slight Ionization              | 168      |  |      |
| 7.8 Arbitrary Degree of Ionization                         | 169      |  |      |
|  |          | APPENDIX A FUNDAMENTAL CONSTANTS AND CONVER-<br>SION FACTORS . . . . . | 285  |
|  |          | APPENDIX B STUDY PROBLEMS . . . . .                                    | 291  |
|  |          | NAME INDEX . . . . .   | 295  |
|  |          | SUBJECT INDEX . . . . .  | 298  |
