Contents

Preface List of Symbols Contents of Volume 2		ix xi xxi
1	 The Many Applications of Plasma Sciences 1.1 What Is a Plasma? 1.2 Thermonuclear Fusion 1.3 Magnetohydrodynamic Applications 1.4 Material Technology 1.5 Plasma in Electrical Engineering 1.6 Plasma Chemistry 1.7 Space Plasma 1.8 Isotope Separation 	1 1 3 5 7 9 10 11 12
2	 Basic Plasma Physics 2.1 The Electric Field of a Plasma Particle 2.2 The Plasma Frequency 2.3 Collisions 2.4 Gyrofrequency and Classification of Plasmas 2.5 Plasma Thermodynamics 2.6 Ionization 	13 13 16 18 23 28 32
3	Basic Features of Instabilities3.1Oscillations, Waves, and Instabilities3.2Nonlinear Oscillations and Stability Analysis3.3Unstable Waves3.4The Nyquist Plot3.5Stabilization	35 35 37 42 46 48
4	 Motion of Individual Particles 4.1 The Guiding Center 4.2 Particles in Inhomogeneous and Time Dependent Fields 4.3 Adiabatic Invariants and Motion in Special Fields 4.4 Collisions and Macroscopic Effects of Orbit Theory 4.5 Instabilities in Orbit Theory 	51 51 54 61 65 71
5	 Statistical Plasma Theory 5.1 Phase Space and Liouville's Equation 5.2 Collisional Kinetic Equations 5.3 Maxwell's and Other Distribution Functions 	75 75 78 83

CONTENTS

6	Magnetohydrodynamics	91
	6.1 The Basic Equations	91
	6.2 The Induction Equation and the Validity Domain of MHD	99
	6.3 General Theorems and Applications of MHD	106
7	7 Many Species Theory	
•	7.1 Statistical Many Species Theory	109
	7.2 Schlüter's Many Fluid Theory	112
	7.3 The Electrical Conductivity	115
	7.4 Diffusion and Other Transport Phenomena in an Unmagnetized Plasma	121
	7.5 Diffusion and Other Transport Phenomena in a Magnetized Plasma	121
8	Plasma Containment	
Ŭ	8.1 Classification of Containment Systems	131
	8.2 Self-Confinement and the Pinch-Effect	135
	8.3 Magnetohydrostatics and Magnetic Surfaces	140
	8.4 Two-Dimensional Equilibria	143
	8.5 Toroidal Equilibria	152
	8.6 Tokamaks and High Beta Systems	164
	8.7 Containment of Vlasov Plasmas	172
	0.7 Containment of Viasov Flasmas	172
9	Oscillations and Waves	179
	9.1 The Dispersion Relation for Electromagnetic Waves	179
	9.2 Oscillations and Waves in Cold Unmagnetized Plasmas	185
	9.3 Oscillations and Waves in Warm Unmagnetized Plasmas	188
	9.4 Waves in Cold Magnetized Plasmas	195
	9.5 The CMA Diagram	205
	9.6 Waves in Warm Magnetized Plasmas	207
	9.7 Waves and Oscillations in Unmagnetized Isotropic Vlasov Plasmas	220
	9.8 Waves and Oscillations in Anisotropic and in Magnetized Vlasov Plasmas	229
	9.9 Waves and Oscillations in Bounded Plasmas	240
10	Classification of Instabilities	251
10	10.1 Nomenclature	251
	10.2 Energy Classification and Negative Energy Waves	254
	10.3 Absolute and Convective Instabilities	257
	10.4 Thermodynamics of Instabilities	265
11	1 MHD Instabilities of an Ideal Plasma	
	11.1 Schlüter's Stability Criterion	269
	11.2 Bernstein's Energy Principle	271
	11.3 Interchange Instabilities	274
	11.4 Pinch Instabilities	285
	11.5 Instabilities of Streaming Ideal Plasmas	295
	11.6 Instabilities in Special Devices	301
	11.7 Localized Instabilities	303
12	MHD Instabilities of a Real Plasma	307
	12.1 The Influence of Finite Electric Conductivity	307
	12.2 Effects of Viscosity, Thermal Conductivity, and Flow	323
	12.3 Finite Conductivity and Diffusion in Toroids	336
13	Drift Waves and Instabilities in Inhomogeneous Plasmas	349
	13.1 Introduction into the Theory of Gradient Instabilities	349
	13.2 Drift Waves in Collisional Plasmas	351

CONTENTS

13.3	Macroscopic Drift Instabilities	359	
13.4	Microscopic Theory of Waves in Non-Homogeneous Collisionless Plasmas	365	
13.5	Low Frequency Drift Waves and Instabilities in a Vlasov Plasma	373	
13.6	High Frequency Drift Waves and Instabilities in a Vlasov Plasma	382	
13.7	Microscopic Theory of Waves and Instabilities in Inhomogeneous Collisional Plasmas	386
