

Contents

Preface	vii
1 Introduction	1
1.1 The use of radiofrequency heating in fusion research	1
1.2 Wave propagation in a plasma	3
1.3 Mode conversion	9
1.4 Particle diffusion	17
1.5 Transit time damping	24
2 Alfvén Wave Heating	26
2.1 Introduction	26
2.2 Properties of the Alfvén wave and the heating mechanism	27
2.3 Effects of cylindrical and toroidal geometry	33
2.4 Antenna-plasma coupling	37
2.5 Experiments on Alfvén wave heating	39
3 Ion Cyclotron Heating	42
3.1 Introduction	42
3.2 Wave propagation in the ion cyclotron range of frequencies	43
3.3 Heating at the second harmonic	46
3.4 The two-ion hybrid resonance and minority heating	52
3.5 Calculations in tokamak geometry and antenna coupling	55
3.6 Experiments on ion cyclotron heating	61
3.7 Ion Bernstein wave heating	67
4 Lower Hybrid Heating	71
4.1 Introduction	71
4.2 Lower hybrid waves in a cold plasma and the accessibility condition	72

4.3	Absorption of lower hybrid waves	79
4.4	Launching of lower hybrid waves	87
4.5	Experimental results on lower hybrid heating	90
4.6	Fast wave heating	93
5	Electron Cyclotron Heating	97
5.1	Introduction	97
5.2	Cold plasma propagation	98
5.3	Electron cyclotron wave propagation in a hot plasma	102
5.4	Non-linear effects at high powers	111
5.5	Experimental aspects	115
6	Current Drive	120
6.1	Introduction	120
6.2	Basic principles	121
6.3	Langevin equations	124
6.4	Adjoint methods	127
6.5	Lower hybrid current drive	132
6.6	Electron cyclotron current drive	138
6.7	Minority species current drive	144
6.8	The anomalous Doppler instability	146
6.9	Conclusion	149
	References	151
	Index	159
