

# CONTENTS

<b>Preface</b>	vii
<b>1. INTRODUCTION</b>	1
<i>Occurrence of Plasmas in Nature • Definition of Plasma • Concept of Temperature • Debye Shielding • The Plasma Parameter • Criteria for Plasmas • Applications of Plasma Physics</i>	
<b>2. SINGLE-PARTICLE MOTIONS</b>	17
<i>Introduction • Uniform <b>E</b> and <b>B</b> Fields • Nonuniform <b>B</b> Field • Nonuniform <b>E</b> Field • Time-Varying <b>E</b> Field • Time-Varying <b>B</b> Field • Summary of Guiding Center Drifts • Adiabatic Invariants</i>	
<b>3. PLASMAS AS FLUIDS</b>	45
<i>Introduction • Relation of Plasma Physics to Ordinary Electromagnetics • The Fluid Equation of Motion • Fluid Drifts Perpendicular to <b>B</b> • Fluid Drifts Parallel to <b>B</b> • The Plasma Approximation</i>	
<b>4. WAVES IN PLASMAS</b>	67
<i>Representation of Waves • Group Velocity • Plasma Oscillations • Electron Plasma Waves • Sound Waves • Ion Waves • Validity of the Plasma Approximation • Comparison of Ion and Electron Waves • Electrostatic Electron Oscillations Perpendicular to <b>B</b> • Electrostatic Ion Waves Perpendicular to <b>B</b> • The Lower Hybrid Frequency • Electromagnetic Waves with <math>B_0 = 0</math> • Experimental Applications • Electromagnetic Waves Perpendicular to <math>B_0</math> • Cutoffs and Resonances • Electromagnetic Waves Parallel to <math>B_0</math> • Experimental Consequences • Hydromagnetic Waves • Magnetosonic Waves • Summary of Elementary Plasma Waves • The CMA Diagram</i>	

<b>5. DIFFUSION AND RESISTIVITY</b>	135
<i>Diffusion and Mobility in Weakly Ionized Gases • Decay of a Plasma by Diffusion • Steady State Solutions • Recombination • Diffusion Across a Magnetic Field • Collisions in Fully Ionized Plasmas • The Single-Fluid MHD Equations • Diffusion in Fully Ionized Plasmas • Solutions of the Diffusion Equation • Bohm Diffusion and Neoclassical Diffusion</i>	
<b>6. EQUILIBRIUM AND STABILITY</b>	175
<i>Introduction • Hydromagnetic Equilibrium • The Concept of <math>\beta</math> • Diffusion of Magnetic Field into a Plasma • Classification of Instabilities • Two-Stream Instability • The "Gravitational" Instability • Resistive Drift Waves</i>	
<b>7. INTRODUCTION TO KINETIC THEORY</b>	199
<i>The Meaning of <math>f(\mathbf{v})</math> • Equations of Kinetic Theory • Derivation of the Fluid Equations • Plasma Oscillations and Landau Damping • The Meaning of Landau Damping • A Physical Derivation of Landau Damping • BGK and Van Kampen Modes • Experimental Verification • Ion Landau Damping</i>	
<b>8. NONLINEAR EFFECTS</b>	241
<i>Introduction • Sheaths • Ion Acoustic Shock Waves • The Ponderomotive Force • Parametric Instabilities • Plasma Echoes • Nonlinear Landau Damping</i>	
<b>9. INTRODUCTION TO CONTROLLED FUSION</b>	279
<i>The Problem of Controlled Fusion • Magnetic Confinement: Toruses • Mirrors • Pinches • Laser-Fusion • Plasma Heating • Fusion Technology • Summary</i>	
<b>APPENDIX</b>	319
<i>Units • Useful Constants and Formulas • Useful Vector Relations</i>	
<b>Index</b>	325
