# Contents

<b>Chapter 1</b>	<b>Introduction</b>	
1.1	<i>Origin and scope of the subject</i>	1
1.2	<i>Orders of magnitude</i>	3
1.3	<i>Fundamental equations</i>	10
<b>Chapter 2</b>	<b>Electrodynamics</b>	
2.1	<i>Fields and sources</i>	16
2.2	<i>The field of a moving point charge</i>	32
2.3	<i>The techniques of special relativity</i>	44
<b>Chapter 3</b>	<b>Čerenkov and Gyro Radiation</b>	
3.1	<i>Uniform rectilinear motion in a vacuum</i>	54
3.2	<i>Čerenkov radiation</i>	60
3.3	<i>Gyro radiation</i>	67
<b>Chapter 4</b>	<b>Dynamical Motion of a Point Charge</b>	
4.1	<i>Equations of motion</i>	81
4.2	<i>Non-relativistic motion in simple special cases</i>	83
4.3	<i>Non-relativistic motion in a slowly varying field: introduction</i>	92

4.4	<i>Non-relativistic motion in a slowly varying field: analysis</i>	100
4.5	<i>Some examples of relativistic motion</i>	118
4.6	<i>The self-force</i>	126
<b>Chapter 5</b>	<b>Waves in an Ionized Gas: Magneto-Ionic Theory</b>	
5.1	<i>Macroscopic description of plasma</i>	140
5.2	<i>Collisionless plasma without magnetostatic field</i>	143
5.3	<i>Collisionless magneto-ionic theory</i>	150
5.4	<i>The inclusion of the motion of positive ions</i>	166
5.5	<i>The inclusion of partial pressures</i>	175
5.6	<i>The inclusion of collisions</i>	187
<b>Chapter 6</b>	<b>Plasma Streams</b>	
6.1	<i>Instability and growth</i>	197
6.2	<i>A single stream</i>	205
6.3	<i>Two streams</i>	210
<b>Chapter 7</b>	<b>Boltzmann's Equation</b>	
7.1	<i>Phase space and Liouville's theorem</i>	223
7.2	<i>The Boltzmann-Vlasov equations</i>	225
7.3	<i>Plasma in thermal equilibrium</i>	228
7.4	<i>Hydrodynamic variables and equations</i>	229
7.5	<i>The solution of Boltzmann's equation in given fields: Jeans's theorem</i>	231
7.6	<i>Examples of Jeans's theorem</i>	233
7.7	<i>A relativistic formulation of Boltzmann's equation</i>	238
<b>Chapter 8</b>	<b>Waves in Ionized Gases: Kinetic Theory</b>	
8.1	<i>Introduction</i>	244
8.2	<i>The response of a plasma to longitudinal fields</i>	245
8.3	<i>Plasma oscillations and Landau damping</i>	251
8.4	<i>The initial value problem</i>	255
8.5	<i>Further discussion of Landau damping</i>	258
8.6	<i>Transverse waves</i>	265

8.7	<i>Maxwellian distributions</i>	268
8.8	<i>The effect of positive ions. Ion waves</i>	272
8.9	<i>A relativistic treatment</i>	274
<b>Chapter 9</b>	<b>Waves in Ionized Gases: Kinetic Theory (continued)</b>	
9.1	<i>Solution of Boltzmann's equation in an external magnetic field</i>	282
9.2	<i>Electrostatic waves in a Maxwellian plasma</i>	285
9.3	<i>The conductivity tensor for a Maxwellian plasma</i>	292
9.4	<i>General distributions</i>	305
9.5	<i>Effect of collisions</i>	310
<b>Chapter 10</b>	<b>Microinstabilities</b>	
10.1	<i>Introduction</i>	319
10.2	<i>Longitudinal oscillations in a field-free plasma. The Penrose stability criterion</i>	321
10.3	<i>Unstable transverse waves in a field-free plasma</i>	327
10.4	<i>Electrostatic instabilities in the presence of a magnetic field</i>	331
10.5	<i>Unstable transverse waves in a magnetized plasma</i>	335
10.6	<i>Some other microinstabilities</i>	339
10.7	<i>Stability of isotropic monotonic distributions</i>	340
<b>Chapter 11</b>	<b>The Derivation of Magnetohydrodynamics</b>	
11.1	<i>Introduction</i>	344
11.2	<i>The adiabatic approximation for collision-dominated gases</i>	346
11.3	<i>The adiabatic approximation for a collisionless plasma in a strong magnetic field</i>	349
11.4	<i>Connection with particle orbit theory</i>	356
11.5	<i>The Chapman-Enskog expansion</i>	360
11.6	<i>Applications of magnetohydrodynamics</i>	382

<b>Chapter 12</b>	<b>Kinetic Equations for Plasmas</b>	
12.1	<i>Introduction</i>	392
12.2	<i>Definitions</i>	393
12.3	<i>The hierarchy of kinetic equations</i>	397
12.4	<i>Uncorrelated particles</i>	399
12.5	<i>The effect of correlations in a plasma</i>	404
12.6	<i>Some generalizations</i>	415
12.7	<i>Discussion of the kinetic equation</i>	420
12.8	<i>The hydrodynamic approximation</i>	431
12.9	<i>Further applications of correlation functions</i>	435
