

CONTENTS

Chapter 1 Introduction

1.1	Origin and scope of the subject	1
1.2	Orders of magnitude	3
1.3	Fundamental equations	10

Chapter 2 Electrodynamics

2.1	Fields and sources	16
2.2	The field of a moving point charge	32
2.3	The techniques of special relativity	44

Chapter 3 Čerenkov and Gyro Radiation

3.1	Uniform rectilinear motion in a vacuum	54
3.2	Čerenkov radiation	60
3.3	Gyro radiation	67

Chapter 4 Dynamical Motion of a Point Charge

4.1	Equations of motion	81
4.2	Non-relativistic motion in simple special cases	83
4.3	Non-relativistic motion in a slowly varying field: introduction	92
4.4	Non-relativistic motion in a slowly varying field: analysis	100
4.5	Some examples of relativistic motion	118
4.6	The self-force	126

Chapter 5 Waves in an Ionized Gas: Magneto-Ionic Theory

5.1	Macroscopic description of plasma	140
5.2	Collisionless plasma without magnetostatic field	143
5.3	Collisionless magneto-ionic theory	150
5.4	The inclusion of the motion of positive ions	166
5.5	The inclusion of partial pressures	175
5.6	The inclusion of collisions	187

Chapter 6 Plasma Streams

6.1	Instability and growth	197
-----	----------------------------------	-----

6.2	A single stream	205
6.3	Two streams	210
Chapter 7 Boltzmann's Equation		
7.1	Phase space and Liouville's theorem	223
7.2	The Boltzmann–Vlasov equations	225
7.3	Plasma in thermal equilibrium	228
7.4	Hydrodynamic variables and equations	229
7.5	The solution of Boltzmann's equation in given fields: Jeans's theorem	231
7.6	Examples of Jeans's theorem	233
7.7	A relativistic formulation of Boltzmann's equation	238
Chapter 8 Waves in Ionized Gases: Kinetic Theory		
8.1	Introduction	244
8.2	The response of a plasma to longitudinal fields	245
8.3	Plasma oscillations and Landau damping	251
8.4	The initial value problem	255
8.5	Further discussion of Landau damping	258
8.6	Transverse waves	265
8.7	Maxwellian distributions	268
8.8	The effect of positive ions. Ion waves	272
8.9	A relativistic treatment	274
Chapter 9 Waves in Ionized Gases: Kinetic Theory (continued)		
9.1	Solution of Boltzmann's equation in an external magnetic field	282
9.2	Electrostatic waves in a Maxwellian plasma	285
9.3	The conductivity tensor for a Maxwellian plasma	292
9.4	General distributions	305
9.5	Effect of collisions	310
Chapter 10 Microinstabilities		
10.1	Introduction	319
10.2	Longitudinal oscillations in a field-free plasma. The Penrose stability criterion	321
10.3	Unstable transverse waves in a field-free plasma	327
10.4	Electrostatic instabilities in the presence of a magnetic field	331
10.5	Unstable transverse waves in a magnetized plasma	335
10.6	Some other microinstabilities	339
10.7	Stability of isotropic monotonic distributions	340
Chapter 11 The Derivation of Magnetohydrodynamics		
11.1	Introduction	344
11.2	The adiabatic approximation for collision-dominated gases	346

11.3	The adiabatic approximation for a collisionless plasma in a strong magnetic field	349
11.4	Connection with particle orbit theory	356
11.5	The Chapman–Enskog expansion	360
11.6	Applications of magnetohydrodynamics	382

Chapter 12 Kinetic Equations for Plasmas

12.1	Introduction	392
12.2	Definitions	393
12.3	The hierarchy of kinetic equations	397
12.4	Uncorrelated particles	399
12.5	The effect of correlations in a plasma	404
12.6	Some generalizations	415
12.7	Discussion of the kinetic equation	420
12.8	The hydrodynamic approximation	431
12.9	Further applications of correlation functions	435
	Index	447
