PREFACE	ix
OPERATIONS IN CYLINDRICAL COORDINATES	xi
1. INTRODUCTION	1
1.1 Physical properties of Alfvén waves	2
1.2 Wave heating schemes	4
1.3 Alfvén waves in space plasmas	9
1.4 Theoretical approximations	12
2. THE PROPAGATION VECTOR	14
3. LOW FREQUENCY ALFVÉN WAVES	17
4. POYNTING AND GROUP VELOCITY VECTORS	21
5. PHASE AND GROUP VELOCITY SURFACES	23
6. EXPERIMENTAL OBSERVATIONS OF ALFVÉN WAVES	29
7. REFLECTION AND REFRACTION OF ALFVÉN WAVES	37
7.1 Ray tracing	41
8. ALFVÉN SURFACE WAVES	43
9. ALFVÉN WAVES IN A CYLINDRICAL PLASMA	47
9.1 Low frequency dispersion relations	49
9.2 Surface waves in cylindrical plasmas	53
10. ALFVÉN WAVES NEAR THE ION CYCLOTRON FREQUENCY	59
10.1 Propagation parallel or perpendicular to \mathbf{B}	61
10.2 The Alfvén wave resonance	62
10.3 Wave field components and polarisation	62
10.4 The group velocity vector	64
10.5 Finite frequency surface waves	66

11. ALFVEN WAVES IN A CURRENT CARRYING PLASMA	71	17.6 Probe calibration	194
11.1 Dispersion relations	75	17.7 Filters	195
11.2 Unstable modes	78	17.8 Phase detectors	196
11.3 Global eigenmodes of the Alfvén wave	80	17.9 RC compensated integrator	197
11.4 Surface waves in a current carrying plasma	86		
12. THE DIELECTRIC TENSOR	93	SPACE FILLERS	13, 16, 28, 36, 46, 58, 70, 128, 160, 175, 198
12.1 Plasma equations	94	COMMENTS ON SPACE FILLERS	199
12.2 Dispersion relations	95	REFERENCES	203
12.3 Low frequency approximations	98		
12.4 High k_{\perp} approximation	99	INDEX	217
12.5 Propagation parallel or perpendicular to \mathbf{B}	101		
12.6 Cold plasma waves	101		
12.7 Finite temperature corrections	104		
13. PLASMAS WITH TWO ION SPECIES	113		
13.1 Cold plasma dispersion relations	115		
13.2 Propagation parallel or perpendicular to \mathbf{B}	117		
13.3 Phase and group velocity surfaces	119		
13.4 Propagation at fixed k_{\perp} or fixed k_{\parallel}	120		
13.5 Wave field polarisation	123		
13.6 The ion-ion hybrid resonance	124		
13.7 Minority deuterium in hydrogen	126		
14. INHOMOGENEOUS PLASMAS	129		
14.1 Ideal MHD equations	130		
14.2 Torsional wave solutions	131		
14.3 Compressional wave solutions	136		
14.4 The Alfvén resonance	139		
14.5 Geomagnetic micropulsations	144		
14.6 Guided wave solutions	146		
14.7 Finite frequency effects	152		
14.8 Behaviour near an isolated cutoff	157		
14.9 Behaviour near a combined resonance and cutoff	158		
15. RESISTIVE DAMPING	161		
15.1 Attenuation of plane waves	164		
15.2 The resistive spectrum	165		
15.3 Phase-mixing in a resistive plasma	173		
16. SIMPLE NUMERICAL TECHNIQUES	177		
16.1 Bessel functions	179		
17. EXPERIMENTAL TECHNIQUES	183		
17.1 Antennas	183		
17.2 Matching networks	185		
17.3 Transmission lines	187		
17.4 Current transformers	190		
17.5 Magnetic probes	192
