
Contents

1. General Equations	1
1.1 Macroscopic Variables Which Characterize a Plasma . . .	1
1.2 Interaction Between Electromagnetic Field and Particles . .	3
2. Dispersion Relation for Plane Waves	7
2.1 Properties of Monochromatic Plane Waves	7
2.2 The General Dispersion Equation	10
2.3 Singularities in the Dispersion Equation	15
a. Case where B_0 is zero. Linearly polarized transverse waves; longitudinal waves	15
b. Case where B_0 is longitudinal; existence of two distinct transverse waves	15
c. B_0 arbitrary. Coupling between transverse and longitudinal waves	16
2.4 General Notation	17
3. Transverse Electromagnetic Waves ($B_T = 0$)	19
3.1 General Equations—Ordinary and Extraordinary Waves . .	19
a. Dispersion relation	19
b. Polarization of the two waves	21
c. Dispersion curves	22
3.2 High Frequency Region	24
a. No magnetic field	24
b. Magnetic field present	25
3.3 Low Frequency Region—Alfvén Waves	25
a. Limits of the index of refraction	25
b. Discussion. Dense plasma; magnetodynamic approximation	26
c. Linearly polarized waves	26
4. Longitudinal Waves ($B_T = 0$)	32
4.1 General Relations	32
a. Dispersion equation and curve	32
b. Ratio of electron-to-ion speeds	35

4.2	Electron Waves: Plasma Electron Oscillations	36
a.	Ion motion	36
b.	Dispersion relation	37
c.	Phase and group velocities	39
d.	Distinction between sound waves and plasma oscillations	40
e.	Microscopic analysis of plasma oscillations	41
4.3	Ion Waves: Ion Oscillations in a Plasma and Pseudosonic Waves	43
a.	Oscillation of ions in a plasma	43
b.	Conditions for the existence of ion oscillations in a plasma	44
c.	Pseudosonic waves	46
5.	Classification of Waves and Plasmas	49
5.1	Transfer of Energy in a Wave	49
a.	The various forms of the energy	49
b.	Equation for electromagnetic energy transfer	50
c.	Equation for mechanical energy transfer	50
5.2	The Relation of Various Forms of Energy	52
5.3	Some Comments about Transverse and Longitudinal Waves	54
5.4	Classification of Plasmas	55
5.5	Numerical Values for Five Typical Cases	59
6.	The Four Modes of Propagation in the General Case ($B_T = 0$)	60
6.1	General Dispersion Relation	60
a.	Existence and orthogonality of four modes	60
b.	Wave polarization	62
c.	Expansion of the determinant (Eq. 2.2)	64
6.2	Properties of the Dispersion Curve	65
a.	General picture and special cases	65
b.	High frequency waves; nomenclature for the four modes	66
c.	Resonance frequencies	68
d.	Critical frequencies	68
e.	Limits of the speed of low frequency waves; magnetodynamic waves (horizontal asymptotes of the dispersion curve)	69
f.	Oblique asymptotes	69
6.3	Double Points of the Dispersion Curve; General Definition of the Four Modes	70
6.4	Quasi-longitudinal Propagation	72
a.	Behavior of the curve in the neighborhood of a coupling point	72

b.	General behavior of curves C_T and C_L . Points of coupling	73
c.	Dispersion curves for five typical plasmas	76
7.	Transverse Propagation ($B_L = 0$)	78
7.1	Dispersion Equation and Curve	78
7.2	Wave Polarization	82
8.	Propagation in Cold Plasmas	84
8.1	Dispersion Equation and Curve	85
8.2	Vertical Asymptotes: Resonance Frequencies	85
a.	General equation	85
b.	Longitudinal propagation	87
c.	Transverse propagation	87
d.	Oblique propagation	88
8.3	Horizontal Asymptotes: Magnetodynamic Waves	89
8.4	Identification of the Modes	89
8.5	Transverse Propagation	93
8.6	High Frequency Approximation: Appleton-Hartree Equation	93
8.7	Polarization of the Waves	96
a.	General properties of transverse polarization	96
b.	High frequency case: Appleton-Hartree approximation	97
9.	Magnetodynamic Waves	99
9.1	Speeds of Propagation	99
a.	General equations; oblique Alfvén wave and magnetoacoustic waves	99
b.	Propagation speed as a function of the propagation angle	101
9.2	Polarization of Magnetodynamic Waves	103
a.	Polarization of the oblique Alfvén wave	104
b.	Polarization of the accelerated and retarded magnetoacoustic waves	106
c.	Energies	109
Appendix 1.	The Conductivity Tensor	113
A1.1	General Equations	113
A1.2	Case $\nu = 0$	114
A1.3	Case $\nu \neq 0$	115
Appendix 2.	The Dispersion Equation as An Eigenvalue Equation ($\nu = \nu_{en} = \nu_{in} = 0$)	116

Appendix 3. Computation and Discussion of the General Dispersion Equations	122
A3.1 Expansion of the Determinant in Table 2.2	122
A3.2 Equation in y	123
A3.3 Equation in $u = y - 1$	123
A3.4 Equation in x	124
A3.5 Horizontal Asymptotes of the Dispersion Curve	126
A3.6 Oblique Asymptote of the Dispersion Curve	127
A3.7 Solutions Restricted to the Neighborhood of the y Axis	128
Appendix 4. Polarization of the Modes	129
Appendix 5. Propagation in Cold Plasmas	132
A5.1 Equation in u	132
A5.2 Vertical Asymptotes	133
A5.3 Transverse Propagation	136
A5.4 High Frequency Approximation (Appleton-Hartree Equation)	137
