CONTENTS

	PART I
	COHERENT NONLINEAR PHENOMENA
Chap	oter 1. Introduction
1.1 1.2 1.3	Basic Equations and Methods
•	oter 2. The Korteweg-de Vries Equation—A Weakly Nonlinear Theory of Ion Sound Waves Introduction and Basic Equation
Chap 2.1 2.2	

vii

viii	CONTENTS	
3.4	Extensions of the Model 3.4.1 Large-Amplitude Oscillations at the Upper Hybrid Frequency 3.4.2 Modifications Due to Collisional Drag. Modifications Due to Finite Electron Temperature 3.5.1 The Truncated Moment Description 3.5.2 The Single-Water-Bag Model 3.5.3 Analytic Properties of the Nonlinear System References Supplementary References	41 41 43 44 45 47 52 53
Chap	oter 4. Strong Wave-Particle Interactions— Particle Trapping	
4.1 4.2	Introduction	54 57 57 62
4.3	Wave	63 70 72 72 76
4.4	Stability of Bernstein-Greene-Kruskal Waves	80 87 87
Chap	oter 5. Plasma Echoes	
5.1 5.2	Introduction and Basic Echo Mechanism	89 90 98 99
Chap	pter 6. Coherent Nonlinear Wave-Wave Interactions	
6.1 6.2 6.3 6.4	Introduction and Basic Equation	116 116 117 118
6.5	6.4.4 Exact Solution for a Single Resonant Triplet Examples of Resonant Three-Wave Coupling References Supplementary References	119 124 127 128

PART II

TURBULENT NONLINEAR PHENOMENA

Chap	pter 7. Statistical Frameworks for Weak Plasma Turbulence	
7.1 7.2 7.3	Basic Definitions and Terminology	133 135 137 137 141 143 143
7.4 7.5	Discrete Particle Interactions Summary	146 147 148 149
Chap	pter 8. Weak Turbulence Theory of Electrostatic Wave-Particle Interactions	
8.1 8.2	Introduction and Basic Assumptions	151 152 152 154
8.3 8.4	Weak Turbulence Kinetic Equations for a Multicomponent Plasma General Properties of the Kinetic Equations 8.4.1 Conservation Laws 8.4.2 The Velocity-Space Diffusion Tensor 8.4.3 Extension of the Theory to the Stable Regime	160 161 161 163 164
8.5 8.6	Electrostatic Turbulence in a Magnetoplasma	165 166 172 173
Chaj	pter 9. Stabilization of the Weak Electron Beam (Bump-in-Tail) Instability	
9.1 9.2 9.3	Introduction and Dispersion Relation	174 175 182 182 183
9.4	Range of Validity of the Theory	187

v	CONTENTS

9.5 9.6	Computer Simulation of the Weak Bump-in-Tail Instability	189 193 196 197
Chap	oter 10. Stabilization of the Ion Loss-Cone Instability	
0.1 0.2 0.3	Introduction and Basic Assumptions	198 200 201 205
Chap	pter 11. Electron Heating by Electron-Ion Beam Instabilities	
11.1	Introduction	206 207 207 209
11.3	Time Evolution of the Electron–Ion Beam System	212 212 215 217
11.4	Computer Simulation of the Electron–Ion Beam Instability	220 220
Cha	pter 12. Weak Turbulence Theory of Electromagnetic Wave-Particle Interactions	
12.1 12.2	Weak Turbulence Kinetic Theory for Parallel Propagation	222 225 225
12.3 12.4	12.2.2 Adiabatic Dispersion Relation	228 229 231 234 241 242
Cha	apter 13. Weak Turbulence Theory of Nonlinear Wave-Wave Interactions	
13.1 13.2		243 245

		CONTENTS	xi	
13.3	The W	eak Turbulence Kinetic Theory	248	
13.5	13.3.1	Weak Turbulence Ordering and Multiple-Time-Scale Perturbation	210	
	13.3.1	Expansion	248	
	13.3.2	Kinetic Equation for Three-Wave Processes	249	
	13.3.3	Resonant Three-Wave Kinetic Equation for Electrostatic Plasma		
		Waves	252	
13.4	Genera	l Properties of the Wave Kinetic Equation	253	
	13.4.1	Preservation of the Nonnegative Nature of $N_{\mathbf{k_1}}^{\alpha}$	253	
	13.4.2	Conservation Laws	254	
	13.4.3	Theorem for Nonlinear Stability	255	
	13.4.4	Nonequilibrium Entropy	255	
13.5	Exact S	Solution of the Wave Kinetic Equation in One Dimension	258	
13.6	Kinetic	es of Resonant Three-Wave Interactions in Three Dimensions	262	
	13.6.1	Diffusion of Electron Plasma Oscillations in a Large-Amplitude Ion		
		Wave Background	262	
	13.6.2	Solution of the Diffusion Equation	264	
13.7	Kinetic	Equation for Resonant Four-Wave Processes	267	
	Referer	nces	271	
	Supple	mentary References	272	
		of Nonlinear Electrostatic Interactions		
14.1	Introdu	action and Basic Assumptions	274	
14.2	Derivat	tion of the Kinetic Equations	274	
	14.2.1	The Vlasov Cumulant Hierarchy	274	
	14.2.2	Weak Turbulence Ordering and Multiple-Time-Scale Perturbation		
		Expansion	276	
	14.2.3	Order- ϵ Solution	278	
	14.2.4	Order- ϵ^2 Solution	281	
	14.2.5	Kinetic Equation for the Waves	285	
	14.2.6	Kinetic Equation for the Particles	287 289	
14.3	Extension of the Kinetic Equations to the Multicomponent Many-Mode Case			
	14.3.1	Some Generalizations and Useful Approximations	289	
	14.3.2	Kinetic Equation for the Particles	291	
144	14.3.3	Kinetic Equation for the Waves	293 294	
14.4	•	ties of the Kinetic Equations	294	
	14.4.1 14.4.2	Conservation Laws	294	
14.5		ear Landau Damping of Electron Plasma Oscillations	298	
17.3	14.5.1	The Kinetic Equations in One Dimension	298	
	14.5.1	Evolution of the Density of Electron Plasma Oscillations	303	
	14.5.2	Computer Simulation of Nonlinear Landau Damping	307	
14.6		ions of the Weak Turbulence Theory	308	
	14.6.1	Discrete Particle Interactions	308	
	14.6.2	Weak Spatial Nonuniformities	314	

xii CONTENTS

Appendix A.	The Korteweg-de Vries Equation and the Inverse Scattering Problem	318
Appendix B.	Matrix Symmetries	321
Appendix C.	Phase-Mixing of Free-Streaming Correlations	323
Appendix D.	Second-Order Two-Body Correlations in a Weakly Turbulent Plasma	
D.2 Kinetic E D.3 Kinetic E	quation for the Waves	324 332 333 333
Appendix E.	Nonlinear Wave-Particle Coupling Coefficients	
E.2 Coupling	Coefficient for the Wave Kinetic Equation	337
Author Index Subject Index		341 348
