

CONTENTS

**Preface** . . . . . vii

**Chapter 1. Introduction (Oscillations in Plasmas) by J. E. Drummond.** . . . 1

1. History of Plasma Oscillations . . . . . 1

2. Basic Statistical Mechanics of Plasmas . . . . . 10

3. Theory of Plasma Oscillations . . . . . 15

4. Quantum Plasma Physics . . . . . 25

**PART I: BASIC PLASMA THEORY**

**Chapter 2. The Spectra of Systems of Interacting Particles**  
*by Y. Klimontovich and V. P. Silin* . . . . . 35

1. Introduction . . . . . 35

2. The Equation for the Quantum Distribution Function . . . . . 37

3. The Kinetic Equation for the Quantum Distribution Function . . . . . 39

4. The Spectra of Collective Vibrations in the Self-consistent-field Approximation . . . . . 46

5. The Influence of Correlations of Particles on the Spectra of Collective Vibrations (Microscopic Approach) . . . . . 54

6. The Influence of the Correlations of Particles on the Spectra of Collective Excitations; Phenomenological Theory of a Degenerate-electron Fermi Liquid . . . . . 56

7. Energy Losses of a Charged Particle during Passage through Matter, Connected with the Excitation of Collective Vibrations in the Medium. . . . 66

8. On Nonlinear Effects during Passage of Charged Particles through Plasma. 74

**Chapter 3. Statistical Mechanics of Reversible Processes**  
*in Plasma Dynamics by E. Meeron* . . . . . 88

**I. Basic Theory**

1. The Approximations Involved in the Definition of the Debye Length . . . 90

2. Density Expansions of Potentials of Average Force, Distribution Functions, and Pressure . . . . . 93

3. Distribution Functions, Potentials of Average Force, and Pressure in Ionized Media . . . . . 99

4. Discussion . . . . . 106

**II. Possible Further Developments**

5. Plasma Conductance . . . . . 112

6. Coordination Energy of a Two-component Plasma . . . . . 116

<b>Chapter 4. Amplifying and Evanescent Waves, Convective and Nonconvective Instabilities</b> <i>by P. A. Sturrock</i>	124
1. Introduction	124
2. Amplifying and Evanescent Waves	128
3. Convective and Nonconvective Instability	133
4. Discussion	136
<b>Chapter 5. How to Distinguish between Attenuating and Amplifying Waves</b> <i>by O. Buneman</i>	143
1. Examples of Attenuating and Amplifying Waves	143
2. Growth in Space and Growth in Time	144
3. Choice of a Termination	145
4. Considerations of a Power	148
5. Fourier Analysis of the Circuit Discontinuity	148
6. The Circuit Equation	149
7. Contour Integration	151
8. Probe between Parallel Plates	152
9. Pierce's Prototype Tube	155
10. The Crossed-field Amplifier	156
11. Propagation in the Cold Tube: Parasitic Modes	158
12. Changing the Probe Level	160
13. Admittance as Ratio of Field Components	161
14. Real Roots of the Dispersion Equation	162

## PART II: MAGNETOHYDRODYNAMICS

<b>Chapter 6. A Review of Magnetohydrodynamics</b> <i>by Y. A. Yoler</i>	167
1. Introduction	167
2. Equations of Magnetohydrodynamics	168
3. Dimensional and Scaling Considerations	171
4. Inviscid Flow in a Channel	174
5. Constant-area Channel Flow	175
6. Flow between Uniform States of a Gas of Finite Conductivity	177
7. Flow of a Perfectly Conducting Compressible Fluid	180
8. Intermittent Acceleration of Dense Plasma	185
9. Magnetohydrodynamic Acceleration of Rarefied Plasma	190
10. Viscous Flows	193
11. Hydrodynamic Analogies	197
<b>Chapter 7. The Bennett Pinch</b> <i>by O. Buneman</i>	202
1. Introduction	202
2. Outline of the Derivation	203
3. The Relativistic Dynamical Equations	204
4. Curvilinear Coordinates	206
5. The Invariant Boltzmann Function	208
6. The Boltzmann Equation	209
7. Relativistic Maxwellian Distributions and Drifts	210
8. Over-all Charge and Current Density	212
9. Relative Drift of Ions and Electrons	213
10. The Field Equations and Their Neutral Solutions	214
11. Orbits	215

12. Stability Analysis	217
13. Perturbations of the Boltzmann Function	217
14. Perturbations Obtained by Integration along Orbits	219
15. Conditions at the Turning Points of Orbits	220
16. The Eigenvalue Program	221

<b>Chapter 8. Stability of Relativistic Self-focusing Streams</b> <i>by D. Finkelstein and P. A. Sturrock</i>	224
1. Introduction	224
2. Classification of Potential Instabilities	225
3. Sinuous Instability	230
4. Discussion	236

## PART III: MICROWAVE PLASMA PHYSICS

<b>Chapter 9. Electrical Properties of High-altitude Ionized Shock Waves</b> <i>by P. A. Goldberg</i>	245
1. Introduction	245
2. Shock-wave Electrical Effects—General Aspects	247
3. Shock-wave Air Parameters	247
4. D-C Conductivity of Ionized Shock Waves	250
5. A-C Conductivity of Ionized Shock Waves	253
6. Effect of Shock-wave Conductivity on Radio Waves	254
7. Electromagnetic Propagation Parameters for an Ionized Gas	255
8. Index of Refraction of Ionized Shock Waves	256
9. Attenuation of Radio Waves by Excitation	257
10. Attenuation of Radio Waves by Reflection	258
11. Depth of Penetration of Radio Waves into Ionized Gas	260

<b>Chapter 10. Transverse Plasma Waves and Plasma Vortices</b> <i>by O. Buneman</i>	270
1. Introduction	270
2. Plasma Perturbations as an Initial-value Problem	273
3. The Relativistic Equations of Motion	274
4. Small Perturbations of a Uniform Multistream Plasma	276
5. Isotropic Distributions	277
6. Wave Velocities within the Stream Velocity Range	281
7. Interpretation of the Laplace Transforms	283
8. The Removal and Dispersal of Vortices	287

<b>Chapter 11. Plasma Power Absorption</b> <i>by J. E. Drummond</i>	293
1. Introduction	293
2. Electron Dynamics and Statistics	294
3. Microwave Propagation	297
4. Migration	300
5. Example	301
6. Summary	302

<b>Chapter 12. Microwave Diagnostics for Controlled Fusion Research</b> <i>by C. B. Wharton</i>	307
1. Introduction	307
2. Wave Propagation Coefficient in an Anisotropic Plasma	307

3. Determination of Electron Density and Collision Frequency in Plasma Experiments . . . . .	312
4. Determination of Electron Temperature . . . . .	319
5. Application to a Sample Experiment . . . . .	329
6. Conclusion . . . . .	330
<b>Chapter 13. Plasma Magnetron Theory by J. E. Drummond . . . . .</b>	<b>332</b>
1. Inferences from Experiment and Assumptions . . . . .	332
2. Development of Plasma Magnetron Theory . . . . .	337
3. Summary and Conclusions . . . . .	349
<b>Chapter 14. Plasma Physics Research at M.I.T. by S. C. Brown . . . . .</b>	<b>354</b>
1. Introduction . . . . .	354
2. Production of Plasma . . . . .	354
3. Study of Plasmas . . . . .	359
<b>Name Index . . . . .</b>	<b>373</b>
<b>Subject Index . . . . .</b>	<b>387</b>
