

Contents

1.	Experiment and Physical Models of a Strongly Nonideal Plasmas (V. E. FORTOV)	1
1.1.	Introduction	1
1.2.	Dynamical Methods in Dense Plasma Physics	2
1.3.	Thermodynamics of a Nonideal Plasma	5
1.4.	Electrical Conductivity of a High Pressure Plasma	17
1.5.	Optical Properties of a Highly Compressed Plasma	24
1.6.	Remarks	30
2.	The Electrical and Thermal Conductivities of Highly Nonideal Alkali Metal Plasmas (P. P. KULIK, V. A. RIABY, E. K. ROZANOV)	32
2.1.	Introduction	32
2.2.	The Experimental Impulse Capillary Isobaric Discharge Device (ICID)	36
2.3.	The Model of the Physical Processes in ICID	37
2.4.	The Experimental Control of ICID-Model Validity	39
2.5.	The Results of Measurements	43
2.6.	Mathematical Processing of the Experimental Data	44
2.7.	The Experimental Results and their Discussion	47
3.	Kinetic Equations and Linear Response Theory for Dense Coulomb Fluids (W. EBELING, YU. L. KLIMONTOVICH, W. D. KRAEFT, G. RÖPKE)	54
3.1.	Introduction	54
3.2.	Kinetic Theory	57
3.3.	Linear Response Theory	76
3.4.	Green's Function Theory	90
3.5.	Discussion	100
4.	Bound States in the Quantum Kinetic Theory of Gases and Plasmas (YU. L. KLIMONTOVICH, D. KREMP, M. SCHLANGES)	111
4.1.	Basic Equations	111
4.2.	Quantum Theory of Two- and Three-Particle Systems with Two-Particle Bound States. Generalization of the Asymptotic Condition	114
4.3.	Binary Density Operator. Definition of Distribution Functions for Free Particles and Atoms	115
4.4.	Kinetic Equations for Free Particles	118
4.5.	Kinetic Equation for Atoms	121
4.6.	Equilibrium Solutions and Conservation Laws	122
4.7.	Kinetic Equations for Partially Ionized Plasmas	125

5.	Theory of Equilibrium and Kinetic Properties of Liquid Metals (N. P. KOVALENKO, YU. P. KRASNÝ)	127
5.1.	Introduction and Concept of Pseudopotential	127
5.2.	Thermodynamic Potential of Liquid Metals	130
5.3.	Inter-Ion Interaction in Liquid Metals. Many Body Forces	135
5.4.	Transport Processes in Liquid Metals. Diffraction Model	141
5.5.	Kinetic Equations for Electron Green's Functions and their Solution	143
5.6.	Theory of Electroconductivity of Liquid Metals with Account of Many Particle Effects	149
5.7.	Remarks	154
6.	The Electrical Conductivity for the Partially Ionized Hydrogen Plasma (D. KREMP, G. RÖPKE, M. SCHLANGES)	156
6.1.	Expressions for the Electrical Conductivity	156
6.2.	The Calculation of the Transport Cross Sections	158
6.3.	Discussion	164
7.	References	168
7.1.	References to Chapter 1	168
7.2.	References to Chapter 2	173
7.3.	References to Chapter 3	174
7.4.	References to Chapter 4	176
7.5.	References to Chapter 5	177
7.6.	References to Chapter 6	179
8.	Subject Index	181
