TABLE OF CONTENTS

Preface		V
1)	Aim and Scope	1
2)	Review of Phenomena	7
3)	Elements of Microscopic Plasma Theorie	19
	Plasma Frequency and Debye Length	21
	Plasmons	26
	Cyclotron Frequency	29
	Collisions	31
4)	Hydrodynamics	37
	Euler's Equation of Motion	37
	Bernoulli's stationary Solution	38
	Equation of Continuity	39
	Compressibility	40
	Acoustic Waves	41
	Equation of Energy	43
5)	Self-Similarity Model	45
	Hydrodynamic Deviation	46
	Laser Irradiation with Varying Radius	49
	Numerical Example	53
	Application to Foils	55
6)	Plasma Dynamics and Lorentz Theory	58
	The Schlueter Equation of Motion	58
	Electrodynamic Equations	59
	Refractive Index of Plasma and its Relation to Absorption	64
	Nonlinear and Relativistic Absorption	71
7)	Waves in Inhomogeneous Plasma	76
	WKB Solution for Perpendicular Incidence	77
	Oblique Incidence and WKB Solution	79
	The Rayleigh Profile	84
	The Airy Profiles	94
8)	Equation of Motion	96
	Collisional Term of the Nonlinear Force	97
	Equivalence to Maxwellian Stress Tensor	104
	Obliquely Incident Plane Waves	108
	Summary	111
9)	Momentum Transfer and the Abraham-Minkowski Problem	113
	Range of Predominance of the Nonlinear Force	114
	Momentum Transfer to the Plasma Corona and Compression	117

	Energy Transfer by Integration of the Nonlinear Force	120
	Photon Momentum in Plasma (Abraham-Minkowski)	122
	Summary	128
10)	Numerical and Experimental Examples - Solitons	129
	Thermokinetic Forces	129
	Static Cases with Nonlinear Forces	134
	Approximative Dynamic Cases - Cavitons	137
	Experimental Examples	147
	Acceleration of Thick Blocks and Solitons	150
	Parametric Instabilities	163
11)	Striated Motion and Resonance Absorption	165
	Striated Motion	165
	Resonance Absorption	179
12)	Self-Focussing of Laser Beams in Plasma	189
	Nonlinear-Force- (Ponderomotive) Self-Focussing	190
	Relativistic Self-Focussing	193
	Laser Beams in Tenuous Plasmas and Spontaneous Magnetic Fields	201
	Conclusions for Medium Laser Intensities	204
	Conclusions for Very High Laser Intensities	206
13)	Laser Compression of Plasma for Nuclear Fusion	211
	Results on Laser Fusion	211
	Requirement for Laser Fusion	214
	Laser Pellet Compression Schemes	215
	Fusion Gain Calculations	219
	Conclusions	222
	Index (References, Names, Subjects)	223
