

Contents

Foreword	
Preface	
List of Contributors	
Development of Nuclear Fusion Research	
	<i>Marshall N. Rosenbluth</i> 1
A Few Perspectives of Nonlinear Dynamics	
	<i>E. Atlee Jackson</i> 17
I. Historical Surveys	
Appendix Concepts Related to Nonlinear Dynamics A Historical Outline	
II. The Logistic map	
III. Strange Attractors	
IV. Two-dimensional Maps	
Time Dependent Drift Hamiltonian	<i>Allen H. Boozer</i> 147
I. Introduction	
II. Magnetic Coordinates	
III. Drift Hamiltonian	
Adventures in Magnetohydrodynamics	<i>John L. Johnson</i> 155
Introduction to the Theory of Fluid and Magnetofluid Turbulence	<i>David Montgomery</i> 207
I. The Origins of Fluid and Magneto Fluid Turbulence	
II. Closures : Attempts at Dynamical Theories	
III. Cascades and Inverse Cascades in Fluids and Magneto Fluids	
Topics in Magnetic Reconnection and Transport in Fusion Devices	<i>Russell M. Kulsrud</i> 303
I. Magnetic Reconnection	
II. Transport in Stellarators	
III. The Nonlinear Ballooning Mode	
Turbulent Transport in Tokamaks	<i>Ronald E. Waltz</i> 357
I. Drift Wave Models for Tokamak Confinement	
II. Theory and Simulation of Electrostatic Turbulent Transport	
III. Theory and Simulation of Electromagnetic Turbulent Transport	
Advanced Fusion Reactors	<i>John. M. Dawson</i> 429
I. Why use Advanced Fuels and Which One, Reaction Power and Bremsstrahlung	
II. Impurity Radiation, Synchrotron Radiation, Electron Ion Energy Exchange, Fuel Ion Heating by Reaction Products	
III. A High Efficiency Heat Engine, Multipole as an Advanced Fuel Reactor, Synchrotron Radiation Current Drive Tokamaks, Heating of Fusion Plasmas with MeV Ion Beams	
Index	473
