

CONTENTS

	Editor's Foreword	xv
	Preface	xvii
Chapter	1	Introduction
1.1	Introductory Survey	1
1.2	Simple Consequences of the Coulomb Interaction	2
	A. Coulomb Cross Section for Momentum Transfer	3
	B. Debye Screening	5
	C. Plasma Oscillation	8
1.3	Parameters Describing the Plasma	9
	A. Discreteness Parameters and Fluid Limit	10
	B. The Plasma Parameter	10
	C. Coulomb Collisions	11
1.4	Collective versus Individual-Particle Aspects of Density Fluctuations	12
	References	15
	Problems	15
Chapter	2	Kinetic Equations
2.1	The Vlasov Equation	16
2.2	Pair Correlation Function and Collision Term	20
2.3	Bogoliubov's Hierarchy of Characteristic Time Scales	23
2.4	Dielectric Propagator	24
2.5	Balescu-Lenard Collision Term	27
2.6	Properties of the Balescu-Lenard Collision Term	30
	References	32
	Problems	32
Chapter	3	Plasmas as Dielectric Media
3.1	Dielectric Tensor and the Dispersion Relation	34
	A. Linearity, Translational Invariance, and Causality	34
	B. Definition of the Dielectric Tensor	36

C. Dispersion Relation	39
D. Isotropic Medium	39
3.2 The Dielectric Response Function	40
A. Test-Charge Problem	41
B. Density-Fluctuation Excitations	42
3.3 Kinetic-Theoretical Calculation of the Dielectric Tensor without Magnetic-Field	43
A. Vlasov-Maxwell Equations	43
B. Perturbations	44
C. The Dielectric Tensor	45
D. The Dielectric Response Function	46
3.4 Kinetic-Theoretical Calculation of the Dielectric Tensor in a Uniform Magnetic Field	46
A. Integration along the Unperturbed Trajectory in the Phase Space	46
B. The Dielectric Tensor	49
C. The Dielectric Response Function	51
References	52
Problems	52
 Chapter 4 Longitudinal Properties of a Plasma in Thermodynamic Equilibrium	
4.1 The Plasma Dispersion Function	55
4.2 Plasma Oscillation and Landau Damping	58
A. Collective Mode	58
B. Collective versus Individual-Particles Aspects	60
4.3 Dynamic Screening	62
A. Debye Screening and Effective Mass Correction	62
B. Stopping Power	64
C. Cherenkov Emission of Plasma Waves	67
4.4 Collective Modes in a Two-Component Plasma	68
A. Two-Temperature Plasma	68
B. The Dielectric Response Function	69
C. Electron Plasma Oscillation	70
D. The Ion Acoustic Wave	71
4.5 Dielectric Response Function with External Magnetic Field	73
4.6 Excitations in Plasmas with a Magnetic Field	74
A. Electron Plasma Oscillation	74
B. The Electron Bernstein Mode	75
C. Ion-Acoustic Wave	77
D. The Ion Bernstein Mode	78
References	79
Problems	79
 Chapter 5 Transverse Properties of a Plasma in Thermodynamic Equilibrium	
5.1 Wave Propagation in Plasmas without External Magnetic Field	82

A. The Transverse Dielectric Function	82
B. Cutoffs and Resonances	83
C. The Anomalous Skin Effect	84
5.2 Dielectric Tensor with External Magnetic Field	89
5.3 Wave Propagation Parallel to the Magnetic Field	90
A. Transformation to Circularly Polarized Waves	90
B. Electron Gas—Helicon	92
C. Compensated Two—Component Plasma—Alfvén Wave and Whistler	95
5.4 Wave Propagation Perpendicular to the Magnetic Field	99
A. Waves in Cold Plasmas	100
B. Nonlocal Effects	102
References	105
Problems	105
 Chapter 6 Transient Processes	
6.1 Propagations of Small-Amplitude Plasma Waves	108
A. Symmetry Properties	109
B. Temporal Propagation	112
C. Spatial Propagation	114
6.2 Plasma-Wave Echoes	115
A. Fundamental Processes	116
B. Detailed Calculation	119
C. Effects of Collisions	123
6.3 Large-Amplitude Plasma Waves	125
A. Trapped Particles	126
B. Amplitude Oscillation	127
C. The BGK Solutions	129
References	130
Problems	131
 Chapter 7 Instabilities in Homogeneous Plasmas	
7.1 Penrose Criterion for Plasma Wave Instability	133
7.2 Beam-Plasma Instability	136
7.3 Ion-Acoustic Wave Instability	139
7.4 Instabilities near Harmonics of the Cyclotron Frequencies	143
A. Coupling between Collective Modes and Instability	143
B. Anisotropic Velocity Distributions	144
C. Instabilities of Electron Plasma Oscillations	145
D. Instabilities of Ion-Acoustic Waves	148
E. Instabilities Associated with the Drift Motion of the Electrons	149

7.5	Loss-Cone Instability	150
A.	Magnetic Mirror	150
B.	Instability	153
7.6	Electromagnetic Instabilities	156
A.	Dielectric Response Function for Circularly Polarized Waves	156
B.	Fire-Hose Instability	157
C.	Two-Temperature Distribution with Drift	158
	References	159
	Problems	160

Chapter 8 Instabilities in Inhomogeneous Plasmas

8.1	Drifts of Particles in Magnetic Field	162
A.	Diamagnetic Drift	162
B.	Effects of Constant External Forces	163
8.2	Longitudinal Dielectric Function for an Inhomogeneous Plasma	164
A.	Unperturbed Distribution Functions	165
B.	Perturbation	166
C.	Integration along the Unperturbed Trajectory	168
D.	Dielectric Response Function	169
8.3	Orbit-Theoretical Treatment of the Flute Instability	170
A.	Gravitational Instability	170
B.	Instability Associated with the Curvature of the Magnetic Field	173
C.	Magnetic Well	174
8.4	Kinetic-Theoretical Treatment of the Flute Instability and Finite Larmor-Radius Stabilization	176
A.	Gravitational Instability	177
B.	Instability Associated with the Curvature of the Magnetic Field	179
C.	Finite Larmor-Radius Stabilization	179
8.5	Drift Wave and Instability	180
A.	Elementary Survey	181
B.	Microscopic Calculations	182
C.	Stabilization of the Drift Wave	185
8.6	Drift Cyclotron Instability	186
	References	188
	Problems	188

Chapter 9 Fluctuations

9.1	Form Factors and Correlations	192
A.	The Static Form Factor and Time-Independent Correlation Function	193
B.	Correlation Energy	195
C.	The Dynamic Form Factor and Time-Dependent Correlation Function	196

9.2	Density Fluctuations in Equilibrium Plasmas	198
A.	Electron Gas	198
B.	Two-Component Plasma	200
9.3	Density Fluctuations in Non-Equilibrium Plasmas	201
A.	Kinetic Theoretical Calculation of the Static Form Factor	202
B.	Kinetic Theoretical Calculation of the Dynamic Form Factor	203
C.	Superposition of Dressed Test Particles	206
D.	Fluctuations Associated with the Collective Modes	210
E.	Plasma Critical Fluctuations	212
9.4	Electromagnetic Fluctuations	212
A.	Spectral Tensors of Fluctuating Field Quantities	213
B.	Spectral Tensor of Current Fluctuations in the System of Uncorrelated Charged Particles	213
C.	Fluctuations of the Electric Field	215
D.	Energy Spectrum of Fluctuations	216
9.5	Interactions between Particles and Fields	219
A.	Basic Formulas	220
B.	Incoherent Scattering of Electromagnetic Radiation	221
C.	Bremsstrahlung	224
	References	229
	Problems	229

Chapter 10 Relaxation Processes

10.1	Fokker-Planck Equation	231
10.2	Fokker-Planck Coefficients	234
A.	Particle Motion in Fluctuating Fields	234
B.	Diffusion Coefficients in Velocity Space	236
C.	Induced Polarization Field of a Test Particle	239
D.	Friction Coefficients in Velocity Space	240
E.	Collision Term	241
10.3	Fokker-Planck Coefficients for Plasmas in Thermodynamic Equilibrium	242
A.	Longitudinal Diffusion Coefficient	242
B.	Transverse Diffusion Coefficient	245
C.	Friction Coefficient	245
10.4	Temperature Relaxations	246
A.	Relaxation of Particle Energy	246
B.	Rate of Temperature Relaxation between Electrons and Ions	248
C.	Anomalous Term	250
D.	Relaxation between the Temperatures Parallel and Perpendicular to the Magnetic Field	253
10.5	Spatial Diffusion across a Magnetic Field	254
A.	Motion of Guiding Centers and Spatial Diffusion	255
B.	Calculation of the Second Moment	256
C.	Calculation of the First Moment	257
D.	Diffusion Coefficient	259
E.	Classical Diffusion	260
F.	Anomalous Term	261

References	. 263
Problems	. 264
Chapter 11 Plasma Turbulence	
11.1 Introductory Survey	. 266
11.2 The Self-Consistent Approach	. 268
11.3 The Kinetic-Theoretical Approach	. 271
A. Mathematical Formulation	. 272
B. Stable Turbulent State	. 274
C. Wave Kinetic Equation	. 276
D. Ordering of Various Quantities with Respect to the Plasma Parameter	. 277
E. Size-Dependent Effect	. 279
F. Beam-Plasma Instability	. 280
G. Ion-Acoustic Waves	. 281
11.4 Scaling Laws and Universal Spectrum	. 283
A. Similarity Transformations	. 283
B. Universal Spectrum	. 286
11.5 Anomalous Transport	. 288
A. Turbulent Heating	. 288
B. Anomalous Resistivity	. 290
C. Diffusion across the Magnetic Field	. 290
D. Conductivity across the Magnetic Field	. 291
E. Radiation from Turbulence	. 292
References	. 293
Problems	. 294
Appendix A Structure of Kinetic Equations	. 295
1. Klimontovich Equation	. 295
2. Liouville Distribution	. 297
3. BBGKY Hierarchy	. 300
Appendix B Derivation of the Balescu-Lenard Collision Term	. 302
Appendix C Analytic Properties of the Dielectric Response Function	. 305
1. Kramers-Kronig Relations	. 305
2. f -Sum Rule	. 306
Appendix D Fluctuation-Dissipation Theorem	. 307
1. Linear Response Functions	. 307
2. Average over the Canonical Ensemble	. 310
3. Fluctuations	. 311

Appendix E Scattering Cross Section of Many-Particle System in the Born Approximation	. 312
1. The Hamiltonian	. 312
2. Transition Probabilities	. 313
3. Scattering Cross Section	. 314
