

Contents

1 Introduction	1
Background	1
Plasma Environment	5
Materials	11
Overview of Effects Produced	17
Units	22
2 Collision Physics	27
Introduction	27
Impact Parameter Cross Sections	29
Elastic Collisions	36
Interaction Potentials	39
Inelastic Collisions	49
Two-State Models: Charge Exchange	54
Stopping Cross Section: Summary	60
Appendix to Chapter 2	63
3 Interaction with Surfaces	75
Introduction	75
Particle Penetration and Implantation	76
Secondary Particles and the Partitioning of Energy	81
Spatial Distribution of Deposited Energy	85
Chemical Alterations in the Gas Phase	89
Solid State Radiolysis	92
Sputtering of a Solid	97
Sputtering of Multicomponent Materials	109
Mixing, Adhesion, and Desorption	111
Electronically Induced Desorption	112
Sputtering of a Solid: Electronic Stimulation	114
Track Production	121
Chemical Effects in Sputtering	122
Appendix to Chapter 3	131

4 Plasma Erosion and Modification of Natural Surfaces and Atmospheres	137
Introduction	137
Plasma Bombardment	138
Sputter Erosion	146
Changes in Surface Albedos	148
Alteration of Surfaces	150
Formation of New Molecules in the Surface	153
Atmospheric Alterations	157
Sputtering vs. Sublimation	158
Sputtering in the Presence of Gravity	161
Atmospheric Escape	175
Plasma Heating and Production of an Extended Corona	181
Production of a Neutral Torus	188
Accumulation of a Magnetospheric Plasma	193
Summary	198
Appendix to Chapter 4	199
References	205
List of Symbols	223
Bibliography of Useful Texts and Reviews	227
Subject Index	229
