

Contents

Introduction	1
Production of a Plasma	8
Plasma Diagnostics	11
Quasi Neutrality and Charge Separation	18
Polarization of a Plasma	22
Gas Discharges	24
Plasma Thermodynamics	25
Elementary Processes	35
Plasmas and Radiation	36
Equilibrium and the Stationary Ionization States	40
Plasmas as Conducting Fluids	44
Field Diffusion and Plasma Diffusion	50
Applications of the Conducting-Fluid Model	51
Toroidal Plasma Traps	53
Electromagnetic Pumping and Plasma Acceleration	55
Magnetohydrodynamic Flow	57
The Two-Fluid Model	59
Plasma Conductivity in a Magnetic Field	64
Plasma as an Ensemble of Independent Particles	66
Drift Motion	68
Electric Drift	71
Conservation of Magnetic Moment	74
The Adiabatic Traps	75
Drift in an Inhomogeneous Field	79
Polarization Drift	83
Rotating Plasmas	85

The Magnetization Current	86
The Quasi-hydrodynamic Approximation	89
Hydromagnetic Plasma Instabilities	91
Pinch Instability	95
Stabilization by Frozen-in Magnetic Fields	96
Interchange or Flute Instabilities	98
Diffusion of Opposed Fields	100
Oscillations and Waves in Plasmas	104
Electrostatic Plasma Oscillations	108
Electrostatic Oscillations with Ions	110
Plasma Oscillations in a Magnetic Field	113
Dispersion near the Cyclotron Frequency	116
Oblique Waves and General Classification of Oscillations . .	119
Propagation of Radio Waves through a Plasma	120
Plasma Resonators and Waveguides	126
Excitation and Damping of Oscillations	130
Shock Waves in Plasmas	134
Random Processes	135
The Drunkard's Walk	138
The Mean Free Path and the Collision Cross Section	139
Collisions with Neutral Particles	141
Coulomb Collisions	144
The Establishment of Thermal Equilibrium	148
Transport Processes in a Magnetic Field	150
Ambipolar Diffusion	152
A Recent Plasma Experiment	154
Index	157
