

Contents

Chapter 1	Introduction	1
1	Inductively Coupled Plasma Mass Spectrometry	1
2	Microwave Induced Plasma Mass Spectrometry	4
3	Advantages of Plasma Source Mass Spectrometry	4
Chapter 2	Plasma Ion Sources for Mass Spectrometry –	
	Ionization and Ion Sampling	7
1	Sustaining the Plasma	7
2	Physical Characteristics of the Source	9
	Ionization Characteristics	11
	Thermal Characteristics	18
	Isotopic Characteristics	21
	Cost	23
	Summary	23
3	Sampling the Ions	24
	Gas Flow through the Sampling Orifice	24
	Skimming the Ions	26
Chapter 3	Inductively Coupled Plasmas	33
1	Argon Plasmas	33
	Interferences	34
	Spectroscopic Interferences	36
	Non-spectroscopic Interferences	38
2	Argon Mixed Gas Plasmas	41
	Attenuation of Interferences	41
	Enhancements in Analyte Sensitivity	46
	Analysis of Organic Compounds	46
3	Helium Plasmas	47
	Practical Requirements	48
	Figures of Merit	49
4	Low Pressure Plasmas	51
	Torch Designs	52
	Interface Designs	52
	Applications	55

Chapter 4	Microwave Induced Plasmas	65
1	Experimental Set-up	66
2	Helium Plasmas	69
	Capillary Gas Chromatography	69
	Supercritical Fluid Chromatography	74
	Electrothermal Vaporization	78
	Solution Nebulization	80
	Atmospheric Pressure Fragmentation Techniques	82
3	Nitrogen Plasmas	85
4	Argon Plasmas	89
5	Low Pressure Microwave Induced Plasmas	89
	Interface Designs	92
	Torch Designs	92
	Applications	95
	Subject Index	104
