

Contents

Preface	xi
Acknowledgments	xv
CHAPTER 1	
The Equations of Fluid Motion	1
1.1 Introductory Remarks	1
1.2 Equations of Motion	2
1.3 The Virial Theorem	12
1.4 Energy Conservation	16
1.5 Some Thermodynamics	18
1.6 Conservative Form of the Fluid Equations	23
1.7 Eulerian and Lagrangian Frames	23
1.8 The Bernoulli Equation — The First Look	24
Appendix: Langmuir Waves as Perturbations of the Distribution Function	31
References	33
CHAPTER 2	
Viscosity and Diffusion	34
2.1 Introduction	34
2.2 The Navier–Stokes Equation	35
2.3 Dissipation and Viscous Coupling	45

2.4 Boundary Layers	46
2.5 Diffusion and Kinetic Theory	50
References	56

CHAPTER 3

Vorticity and Rotation 57

3.1 Introduction	57
3.2 Geostrophic Approximation	73
3.3 Viscous Effects: A Simple Example	86
3.5 Self-Gravitating Bodies	87
References	93

CHAPTER 4

Shocks 95

4.1 Introduction to Shock Phenomena	95
4.2 Generation of Shock Waves	96
4.3 The Rankine–Hugoniot Conditions	102
4.4 Some Additional Complications	110
4.5 A Quodlibet of Applications of Shocks to Astrophysical Problems	122
Appendix A: Details of the Spiral Shock Picture	141
Appendix B: Bending of Jets by a Supersonic Cross-Flow	144
Appendix C: Collisions of Galaxies with an Intracluster Gas	144
References	145

CHAPTER 5

Similarity Methods 148

5.1 Introduction	148
5.2 Similarity Solution for Static Configurations: Polytropes	159
5.3 Classical Gravitational Collapse	166
Appendix: Diffusion Equations	169
References	170

CHAPTER 6

Magnetic Fields in Astrophysics 171

6.1 Historical Introduction	171
-----------------------------	-----

6.2	The Basic Equations	174
6.3	Alfvén Waves	181
6.4	Magnetic Equilibrium: A Basic Example — Pinch Equilibrium	185
6.5	Force-Free Fields	188
6.6	Vorticity Analogy and Magnetic Helicity	191
6.7	Magnetic Dynamos	194
6.8	Magnetic Reconnection	209
	Appendix: Rikitake's Toy Phenomenological Model	211
	References	212

CHAPTER 7

Turbulence	214	
7.1 Introduction	214	
7.2 Astrophysical Environments	215	
7.3 Incompressible Turbulence	216	
7.4 Kolmogorov Theory: The Role of Dissipation		224
7.5 Time Dependence of the Turbulence Spectrum		227
7.6 The Transition to Turbulence	235	
7.7 Compressible Turbulence: The Lighthill Process		237
7.8 More Physical Complications	240	
7.9 Some Observational Signatures of Astrophysical Turbulence	247	
Appendix A: Stochastic Functions and Their Application to Turbulence	248	
Appendix B: Stochastic Differential Equations		249
Appendix C: Fractals	250	
Appendix D: Nonlinear Maps and the Transition to Chaos		253
References	255	

CHAPTER 8

Outflows and Accretion	257	
8.1 Introduction	257	
8.2 Historical Overview of Winds, Especially from Stars		257
8.3 The Isothermal Wind Problem	260	
8.4 Driving Stellar Mass Loss	268	

8.5 Magnetic Winds	274
8.6 Winds within Winds	282
8.7 Accretion Disks in Astrophysics	289
8.8 Spherical Accretion	305
References	314

CHAPTER 9

Instabilities	318
9.1 Introduction	318
9.2 Waves	318
9.3 Convection	324
9.4 Pulsation as an Instability	343
9.5 Thermal Instability	353
9.6 A Selection of Important Instabilities	357
9.7 Exeunt	371
References	371

CHAPTER 10

Diagnosis of Astrophysical Flows	373
10.1 Introduction	373
10.2 Radiative Transfer on the Cheap	374
10.3 A Sampling of Cosmical Flows	396
References	415

Problems and Questions for Further Exploration	417
---	-----

Appendix: Some Real Numbers	423
------------------------------------	-----

General Bibliography	428
-----------------------------	-----

Index	445
--------------	-----
