<i>Preface to the Second Edition</i>	v
<b>1. Basic Electricity and Magnetism</b>	<b>1</b>
1.1 Introduction	1
1.2 Dielectrics, Conductors, Charges and Magnetization	1
1.3 Basic Laws of Electrodynamics	7
1.4 Lorentz Force	11
1.5 Some Comments on the Maxwell Equations	13
1.6 Macroscopic and Microscopic Approaches	15
1.7 Poynting Theorem for Energy flux	19
1.8 Maxwell Stresses	20
1.9 Vector Potential and Scalar Potential	25
1.10 Radiation solution for the Potentials	26
1.11 Far-field Approximation	28
1.12 Lienard-Wiechert Potentials	31
1.13 Electromagnetic field of Radiation from an Accelerated Electron	35
1.14 Radiation Power	42
1.15 Damping Force of Radiation	45
1.16 Bateman Vector	47
1.17 Basically Relativistic Nature of Fluctuating Magnetic Fields	48
1.18 Lagrangian for Motion in Electromagnetic field	49
<b>2. Dynamics of Charged Particles</b>	<b>53</b>
2.1 Introduction	53
2.2 Basics Equations	53
2.3 Particle Motion in presence of Constant Magnetic Field	55
2.4 Charge Confinement by Magnetic Field	58
2.5 Basics of the General Theory of Orbits	59
2.6 Orbit in Constant Magnetic and Electric Fields	59

2.7 Orbit in presence of Constant Magnetic Field and force of non-electromagnetic nature	61	
2.8 Orbit in constant magnetic field and electric field slowly varying with time	62	
2.9 Spatially varying magnetic field and the guiding centre approximation	64	
2.10 Particle motion in spatially inhomogeneous magnetic field	66	
2.11 An alternative treatment of particle motion in inhomogeneous magnetic field	71	
2.12 Adiabatic invariance and longitudinal gradient	73	
2.13 Curvature and Gradient drifts	76	
2.14 Magnetic field slowly varying in time	78	
2.15 Magnetization current	79	
2.16 Summary of Currents and Drifts	81	
2.17 Net drift and force	82	
2.18 Orbit in oscillating electric field and constant magnetic field	83	
2.19 Theory of Larmor precession	86	
2.20 Dynamics of relativistic electrons	89	
2.21 The parameter of expansion and scaling laws	91	
2.22 Transformation of fields to dimensionless form	92	
2.23 Similarity transformations and scaling laws	93	
2.24 A general scheme of expansion for the guiding centre approximation	96	
<b>3. Basic Plasma Properties</b>		<b>98</b>
3.1 Introduction	98	
3.2 Space field of a charge	102	
3.3 Mixture of fluids of positive and negative charges	103	
3.4 Waves in unmagnetized plasmas	106	
3.5 Some aspects of waves in plasmas	109	
3.6 Longitudinal waves when both electrons and ions are mobile	111	
3.7 Energy transport	114	
3.8 Transport through harmonic waves	117	
3.9 Space charge separation	120	
3.10 Debye shielding potential field	121	
3.11 Generalised Ohm's Law	125	
3.12 Waves in magnetized plasmas	128	
3.13 Electromagnetic wave propagating parallel to a constant magnetic field	129	
3.14 Faraday rotation	133	
3.15 Radiation from plasma	142	
3.16 Stream instabilities in cold plasmas	146	
<b>4. Magnetohydrodynamics</b>		<b>152</b>
4.1 Introduction	152	
4.2 MHD equations	153	
4.3 Approximations of MHD from dimensional considerations	159	
4.4 Reduced MHD equations	162	
4.5 Some general properties	163	
4.6 Analogy with hydrodynamics. Magnetic Reynolds number	167	
4.7 Frozen-in-effect	168	
4.8 Ferraro's law of isorotation	169	
4.9 Linearization of the MHD equations	171	
4.10 MHD waves in incompressible media	171	
4.11 Magnetosonic waves	174	
4.12 Double adiabatic theory	178	
4.13 MHD shock waves	180	
4.14 Shock thickness	186	
4.15 MHD stability theory	187	
<b>5. Applications of MHD and Plasma</b>		<b>190</b>
5.1 Introduction	190	
5.2 Hartman flow	191	
5.3 Couette flow	194	
5.4 Pinch effect	197	
5.5 Pinch stability	203	
5.6 MHD generator	207	
5.7 Theory of MHD Generators	210	
5.8 Some information on MHD power generation	214	
5.9 Some information on laboratory plasmas	217	
5.10 Space plasma	220	
<b>6. Collision Processes in Plasmas</b>		<b>223</b>
6.1 Introduction	223	
6.2 Two-particle Coulomb interaction	225	
6.3 Interactions in screened potential	228	
6.4 Diffusion and scattering	229	
6.5 Relaxation processes	230	
6.6 Scattering of ions by electrons	232	
6.7 Interactions of long and short ranges	233	
6.8 Plasma conductivity	234	

6.9	Diffusion of plasma	236
6.10	Collision processes in the ionosphere	239
6.11	Thomson and Rayleigh scattering cross section	240
6.12	Collisions in weakly ionized plasmas	243
6.13	Nonequilibrium ionization field effect	244
6.14	Dissociation and recombination	247
<b>7.</b>	<b>Ionospheric Crossmodulation</b>	<b>251</b>
7.1	Introduction	251
7.2	Standard terminology	252
7.3	Some facts	252
7.4	Physics of the phenomena	253
7.5	Nonlinear nature of the process	255
7.6	Some remarks	256
7.7	The mean free path method of Townsend	257
7.8	Basics of the Bailey-Martyn theory	258
7.9	The mean free path for alternating fields	259
7.10	Oscillations of collision frequency	262
7.11	Absorption of modulated field in space	264
7.12	When the ionosphere is assumed unmagnetized	265
7.13	When the ionosphere is assumed magnetized	267
<b>8.</b>	<b>Kinetic Theory</b>	<b>270</b>
8.1	Introduction	270
8.2	Phase space in many-particle motion	271
8.3	Many-body particle dynamics	273
8.4	Distribution functions	274
8.5	Reduced distribution functions	275
8.6	Truncated distribution functions	277
8.7	Liouville's theorem	278
8.8	Equations for one-particle distribution	282
8.9	Equations for $F_j$	285
8.10	Energy statistics in velocity and position spaces	288
<b>9.</b>	<b>Distributions in Six-dimensional Phase Space</b>	<b>290</b>
9.1	Introduction	290
9.2	Six-dimensional phase-space and distribution function	291
9.3	Boltzmann equations	292
9.4	Collision term, quasi static solution and Boltzmann statistics	294
9.5	Saha equation	301

9.6	Macroscopic averages	303
9.7	Boltzmann's H-theorem	306
9.8	Analysis of the Maxwell velocity distribution	308
9.9	Number of particles striking a wall	311
9.10	Equations of macroscopic motion	311
9.11	Expansions of distribution functions and macroscopic variables	318
9.12	Reaction rate	320
<b>10.</b>	<b>Plasma Kinetic Theory</b>	<b>323</b>
10.1	Introduction	323
10.2	Vlasov equations	324
10.3	Linearization of Vlasov equations	325
10.4	Small amplitude oscillations	327
10.5	Relaxation towards the steady state	335
10.6	Plasmoids	336
10.7	Theory for the first type of plasmoids	339
10.8	Beam of charges along static magnetic field—a preliminary study	344
10.9	Second type of plasmoids	346
10.10	The spherical harmonic expansion of the distribution functions	351
10.11	Collision term in weakly ionized plasmas	356
10.12	Evaluation of the collision term	359
10.13	Microscopic theory of the cross modulation effect	362
10.14	Microscopic theory for unmagnetized plasma	363
10.15	Interaction of four waves	366
<b>11.</b>	<b>Small Amplitude Waves in Plasmas</b>	<b>368</b>
11.1	Introduction	368
11.2	Linearized equations in a plasma containing neutral particles	368
11.3	Anisotropy of magnetized plasma	372
11.4	Appleton-Hartree equation	375
11.5	Dielectric and conductivity tensors	376
11.6	Waves in the principal coordinate system	378
11.7	Appleton Hartree equation in warm plasmas	380
11.8	Whistlers	383
11.9	Electromagnetic field in dissipative plasmas	386
11.10	Remarks on waves and their coupling in inhomogeneous plasmas	388

11.11	Coupling of waves in plasmas	391	
11.12	Longitudinal wave excited by a transverse wave at a boundary	394	
11.13	Some remarks on forces in nonuniform plasmas	395	
11.14	Drift due to inhomogeneous electric field	396	
11.15	Effects of finite Larmor radius and ion mass	398	
<b>12.</b>	<b>Some Relativistic and Other Nonlinear Aspects of Plasma</b>	<b>400</b>	
12.1	Introduction	400	
12.2	Some remarks on nonlinear effects in plasmas	400	
12.3	Electron motion in the field of an electromagnetic wave	401	
12.4	Relativistic Vlasov equations	407	
12.5	The relativistically correct equilibrium distribution	410	
12.6	The linearized approximation	411	
12.7	Oscillations in the presence of constant magnetic field $H_0$	415	
12.8	Transformation to the space-independent frame	417	
12.9	Vlasov equations in the space-independent frame	419	
12.10	Breaking of large-amplitude oscillations	422	
12.11	Nonlinear field equations in cold relativistic plasmas	429	
12.12	Secular-free solution of nonlinear equations	430	
12.13	Intensity-induced precessional rotation of strong electromagnetic waves	434	
12.14	Wave precession in the laboratory frame	442	
12.15	Wave precession results using complex field variables	443	
12.16	Wave precession as a consequence of the nonlinearly developed bi-refringence	449	
12.17	Remarks on limiting solutions for strong waves	453	
<b>13.</b>	<b>Dynamics of Rotating Plasmas</b>	<b>455</b>	
13.1	Introduction	455	
13.2	Some remarks on electrodynamics in rotating frames	456	
13.3	Transformation of coordinates for small rotational velocities	458	
13.4	Non relativistic Lagrangian for Newtonian rotation	461	
13.5	Maxwell equations for small rotational velocities	463	
13.6	Further reduction of the Maxwell equations	468	
13.7	Steady rotation of axially symmetric systems	470	
13.8	The Schiff charge of rotation	470	
13.9	MHD equations in rotating frames	471	
13.10	Equations of motion for a rotating plasma	473	
13.11	Some remarks on plasma turbulence	477	
13.12	Relations between rotation, magnetic field and turbulence	480	
13.13	Earth's rotation and precession	482	
13.14	Differential rotation	483	
13.15	Ring Laser	484	
<b>14.</b>	<b>Laser Plasma Interaction</b>	<b>492</b>	
14.1	Introduction	492	
14.2	The SRS and SBS in laser plasma interactions	493	
14.3	Parametric interaction of three waves	495	
14.4	Laser produced plasma	497	
14.5	The Nishikawa model for nonlinear parametric processes in plasmas	499	
14.6	Nonlinear polarization	504	
14.7	Field equations in nonlinear dielectric like plasmas	507	
14.8	Manley-Rowe relations	509	
14.9	Negative and positive energy waves	511	
14.10	Basic equations in laser heating of plasmas	512	
14.11	Parametric interaction between two Alfvén waves and a sound wave	515	
14.12	Impact of strong radiation in plasmas	520	
	<b>Appendices</b>		<b>523</b>
Appendix 1:	Delta function of Dirac	523	
Appendix 2:	Theorems of Gauss, Green and Stokes	524	
Appendix 3:	Some vector and tensor results	524	
Appendix 4:	Solution of the inhomogeneous wave equation	526	
Appendix 5:	The Lagrangian and Hamiltonian formalisms	530	
Appendix 6:	Orthogonal coordinates and curvature	531	
Appendix 7:	Physical constants	532	
Appendix 8:	Change of flux of a vector through a smooth surface	533	
Appendix 9:	Discontinuity of a function at a moving surface	534	
Appendix 10:	Two-body elastic collisions	536	
Appendix 11:	Collision cross section	545	
Appendix 12:	Collision probability	548	
Appendix 13:	The Random walk problem	551	
Appendix 14:	The WKB method	553	

**xvi Contents**

**Appendix 15: Transformation to the space-independent  
frame 555**

**Appendix 16: Some results for weakly nonlinear systems 558**

***Bibliography* 562**

***Author Index* 581**

***Subject Index* 585**
