

## Table of Contents

<b>Preface</b>	<b>1</b>
<b>1 Introduction</b>	<b>5</b>
1.1 Parameters of astrophysical plasmas . . . . .	5
1.1.1 Basic plasma properties and characteristic frequencies . . . . .	5
1.1.2 Specific values of cosmic plasma parameters and magnetic field strengths . . . . .	8
1.1.3 Plasma under extreme astrophysical conditions . . . . .	18
1.2 Electromagnetic radiation and its main characteristics . . . . .	21
1.2.1 Energy density and specific intensity . . . . .	21
1.2.2 Polarization of radiation. Polarization tensor and Stokes parameters . . . . .	27
1.3 Radiation sources and radiation mechanisms. Definitions and general properties . . . . .	32
1.3.1 Spectral power and flux density of radiation from stationary and moving sources . . . . .	33
1.3.2 Radiation mechanisms . . . . .	41
<b>2 Electromagnetic waves in homogeneous plasma</b>	<b>45</b>
2.1 Dielectric permittivity of plasma. Dispersion equations . . . . .	45
2.1.1 Electromagnetic field equations in a medium . . . . .	45
2.1.2 Dispersion relations for normal waves . . . . .	50
2.1.3 Dielectric tensor of plasma . . . . .	54
2.2 Electromagnetic waves in homogeneous equilibrium plasma	67
2.2.1 Waves in isotropic plasma . . . . .	67
2.2.2 Ordinary and extraordinary waves in magnetoactive plasma . . . . .	71
2.2.3 Plasma waves . . . . .	81
2.2.4 Bernstein modes . . . . .	84
2.2.5 Waves in relativistic plasma . . . . .	88
2.2.6 Electromagnetic waves in a system comprising birefringent vacuum and rarefied plasma . . . . .	91

## TABLE OF CONTENTS

<b>3 Electromagnetic waves in inhomogeneous astrophysical plasma</b>	<b>95</b>
3.1 Geometrical optics approximation in an inhomogeneous medium . . . . .	95
3.1.1 The form of the geometrical optics solution . . . . .	95
3.1.2 Geometrical optics approximation in isotropic and magnetoactive plasma . . . . .	96
3.1.3 The ray approach . . . . .	102
3.1.4 Effect of the group delay of signals . . . . .	107
3.2 Linear mode coupling in magnetoactive plasma . . . . .	111
3.2.1 Equations of quasi-isotropic approximation and basic problems of linear mode coupling theory . . . . .	112
3.2.2 Linear coupling in an inhomogeneous magnetic field . . . . .	119
3.2.3 Transition layers and “limiting” polarization of radiation . . . . .	121
3.2.4 Propagation of waves through a region with transverse magnetic field . . . . .	124
3.2.5 Wave propagation through a zero magnetic field surface . . . . .	136
3.2.6 On the role of the linear mode coupling in cosmic plasmas with an inhomogeneous magnetic field . . . . .	142
3.2.7 Coupling of electromagnetic waves and the problem of escape of radio emission from dense plasma . . . . .	146
3.2.8 Linear mode coupling in a system “plasma + birefringent vacuum”. . . . .	151
<b>4 Transfer of radiation in astrophysical plasmas</b>	<b>155</b>
4.1 Transfer of radiation intensity . . . . .	156
4.1.1 Radiation transfer equation in isotropic plasma . . . . .	156
4.1.2 Transfer equation for magnetoactive plasma . . . . .	163
4.1.3 Solutions of radiation transfer equations . . . . .	166
4.2 Transfer of polarization . . . . .	175
4.2.1 Faraday and Cotton–Mouton effects in plasma . . . . .	175
4.2.2 Equations of polarization transfer in magnetoactive plasma . . . . .	183
4.2.3 Solutions of polarization transfer equations . . . . .	191
<b>5 Emission by astrophysical plasmas</b>	<b>199</b>
5.1 Emission by a charged particle . . . . .	199
5.1.1 Bremsstrahlung . . . . .	199
5.1.2 Čerenkov radiation . . . . .	204
5.1.3 Magnetic bremsstrahlung . . . . .	207

5.1.4	Cyclotron radiation . . . . .	215
5.1.5	Synchrotron radiation . . . . .	221
5.1.6	Curvature radiation . . . . .	231
5.2	Plasma emissivity . . . . .	233
5.2.1	Bremsstrahlung emissivity . . . . .	234
5.2.2	Čerenkov emissivity . . . . .	237
5.2.3	Cyclotron emissivity . . . . .	238
5.2.4	Gyrosynchrotron emissivity . . . . .	242
5.2.5	Synchrotron emissivity. Synchrotron mechanism of cosmic radio emission . . . . .	249
<b>6</b>	<b>Absorption in thermal astrophysical plasmas</b>	<b>257</b>
6.1	Absorption in isotropic plasma . . . . .	258
6.1.1	Absorption due to particle collisions. Bremsstrahlung radiation mechanism . . . . .	258
6.1.2	Čerenkov absorption of plasma waves. Landau damping . . . . .	268
6.2	Absorption in magnetoactive plasma . . . . .	269
6.2.1	Absorption of electromagnetic waves due to particle collisions . . . . .	270
6.2.2	Cyclotron absorption. Mechanism of thermal cyclotron emission . . . . .	272
<b>7</b>	<b>Reabsorption and amplification of radiation in non-equilibrium plasma</b>	<b>287</b>
7.1	Method of kinetic equation and method of Einstein coefficients . . . . .	288
7.1.1	Method of kinetic equation. Amplification and convective instability . . . . .	288
7.1.2	Method of Einstein coefficients . . . . .	292
7.1.3	Population balance equation . . . . .	296
7.2	Čerenkov instability . . . . .	307
7.2.1	Instability and amplification in a system “beam – plasma” . . . . .	307
7.2.2	Buneman instability . . . . .	313
7.2.3	Loss-cone instability . . . . .	315
7.2.4	Quasi-linear theory of beam instability . . . . .	317
7.2.5	Plasma mechanism of radio wave generation . . . . .	323
7.3	Cyclotron instability . . . . .	325
7.3.1	Cyclotron instability of longitudinal waves . . . . .	325
7.3.2	Kinetic instability of Bernstein modes . . . . .	327
7.3.3	Kinetic instability in the hybrid band . . . . .	333

## TABLE OF CONTENTS

7.3.4	Hydrodynamic instability at double plasma resonance	336
7.4	Synchrotron reabsorption and instability . . . . .	340
7.4.1	Synchrotron reabsorption . . . . .	340
7.4.2	Reabsorption coefficient for power-law particle energy spectrum . . . . .	343
7.4.3	Synchrotron instability . . . . .	345
7.4.4	Negative reabsorption in a system of relativistic electrons with a “monoenergetic” or power-law energy spectrum . . . . .	348
7.4.5	Concluding remarks . . . . .	352
<b>8</b>	<b>Scattering of radiation in plasma</b>	<b>357</b>
8.1	Scattering of waves by particles in isotropic plasma . . . . .	357
8.1.1	Spontaneous and stimulated scattering . . . . .	357
8.1.2	Integral kinetic equation for photons and radiation transfer equation . . . . .	360
8.1.3	Scattering of radiation with one-dimensional spectrum. Differential and integral redistribution . . . . .	363
8.1.4	Stabilization of beam instability . . . . .	366
8.1.5	Rayleigh scattering in non-relativistic plasma . . . . .	371
8.1.6	Scattering by free particles. Inverse Compton effect .	377
8.1.7	Kompaneets differential equation and “comptonization” of radiation . . . . .	384
8.2	Transfer of radiation at cyclotron frequencies . . . . .	394
8.2.1	Resonant cyclotron scattering . . . . .	394
8.2.2	Transfer equation for radiation at cyclotron frequencies in collisionless plasma . . . . .	396
8.2.3	Solution of radiation transfer equation in a homogeneous and inhomogeneous magnetic field . . . . .	399
8.2.4	Transfer of radiation at cyclotron frequencies in plasma with particle collisions . . . . .	407
8.2.5	Cyclotron features in the spectra of magnetic degenerate stars . . . . .	414
8.3	Radiation pressure force in plasma . . . . .	421
8.3.1	Radiation pressure due to Thomson scattering . . . . .	421
8.3.2	Pressure force by radiation at cyclotron frequencies .	423
8.3.3	Radiation pressure effects on magnetic degenerate stars . . . . .	429
8.4	Raman scattering in plasma . . . . .	433
8.4.1	Conservation laws for elementary scattering events .	434
8.4.2	Kinetic equation for photons and the radiation transfer equation . . . . .	438

**TABLE OF CONTENTS**

ix

8.4.3 Coalescences and decays in isotropic plasma . . . . .	443
