

CONTENTS

PART I THE EARTH AND ITS ENVIRONMENT

Introduction	3
1. The Earth's Magnetic Field—M. Sugiura and J. P. Heppner	5
Introduction	5
Geomagnetic Coordinates, Maps, and Mathematical Descriptions	8
Origin of the Earth's Main Field	18
Daily Magnetic Variations	24
Polar and Aural Disturbances	41
Magnetic Storms	58
Magnetic Activity Indices	71
Rapid Variations	73
Whistlers and VLF Emissions	83
References	92
2. The Earth's Atmosphere—I. Harris and N. W. Spencer	93
Interpretation of Satellite Orbit Decay	94
The Neutral Atmosphere Above the Mixing Region	96
Time Variations	98
Atmospheric Models	107
Direct Measurements of the Atmosphere	110
Summary of Neutral Particle Atmosphere	129
References	130

3. The Ionosphere—A. C. Aikin and S. J. Bauer.....	133
Introduction.....	133
The Production of Ionization by Solar Photons.....	136
Ionic Reactions.....	141
Mass-Transport of Charged Particles.....	145
Formation of the Ionospheric Layers.....	147
Rockets and Satellites in Ionosphere Research.....	162
References.....	163
4. The Earth's Radiation Belt—W. N. Hess.....	165
Introduction.....	165
Motion of Particles in a Dipole Field.....	168
Particle Sources.....	173
Loss Processes.....	176
High Energy Protons.....	178
Medium Energy Protons.....	188
Outer Zone Protons.....	190
Electrons.....	192
Other Particles.....	201
References.....	202
5. The Aurora—T. N. Davis.....	205
Introduction.....	205
Morphology of the Visual Aurora.....	206
Related Geophysical Phenomena.....	223
Auroral Emission and Excitation.....	227
Entry of Energetic Particles into the Atmosphere.....	231
The Interaction of Energetic Particles with the Atmosphere.....	237
Theories of the Aurora.....	241
References.....	249
6. Meteorology From Space—W. Nordberg and S. I. Rasool... ..	251
Rockets and Spacecraft as Tools for Meteorological Observa- tions.....	251
Meteorology of the Upper Atmosphere.....	255

Sensors for Meteorological Observations from Space.....	267
Contribution of Satellite Experiments to Meteorology.....	280
References.....	295
 7. The Shape of the Earth—W. M. Kaula.....	 297
Introduction.....	297
Methods of Observation.....	302
Numerical Results.....	310
Geophysical Implications.....	314
References.....	317

PART II SPACE

Introduction.....	321
 8. The Interplanetary Medium—N. F. Ness.....	 323
Introduction.....	323
Solar Wind.....	326
Theoretical Model of the Interplanetary Medium.....	328
Plasma Measurements.....	335
Measurements of the Interplanetary Magnetic Field.....	338
Summary.....	345
References.....	346
 9. The Boundary of the Magnetosphere—W. N. Hess and G. D. Mead.....	 347
Introduction.....	347
Historical Background.....	349
Observations of the Magnetopause.....	351
Theory and Calculations of the Boundary.....	356
The Bow Shock.....	363
The Transition Zone.....	369
The Tail of the Magnetosphere.....	373
Summary.....	379
References.....	381

10. Cosmic Rays—R. A. Palmeira and G. F. Pieper.....	383
Galactic Cosmic Rays.....	384
Origin of Cosmic Rays.....	390
Time Variations.....	398
Solar Cosmic Rays.....	406
Conclusions.....	420
References.....	421
11. Interplanetary Dust Particles—C. W. McCracken and W. M. Alexander.....	423
Introduction.....	423
Equations of Motion and the Poynting-Robertson Effect.....	425
Meteors.....	433
Meteorites.....	437
Micrometeorites.....	438
The Zodiacal Light and the Solar Corona.....	440
Direct Measurements of Interplanetary Dust Particles.....	445
The Origin of Interplanetary Dust Particles.....	449
The Mass Distribution of Interplanetary Dust Particles.....	453
The Enhanced Flux of Small Dust Particles in the Vicinity of the Earth.....	459
Summary.....	468
References.....	470
12. Cosmic Chemistry—B. Donn.....	473
Introduction.....	473
Astrochemical Problems.....	476
References.....	499
13. Orbital Mechanics—P. Musen and R. K. Squires.....	501
Analytical Treatment.....	501
The Equatorial Bulge.....	502
Resonances.....	506
Lunar and Solar Effects.....	507
Problems.....	514

Patched Conics.....	514
Perigee of the Echo I Balloon.....	518
Very Eccentric Satellite Orbits.....	520
Drag.....	522
References.....	525
 14. Man in Space—W. S. Cameron.....	 527
References.....	546
 PART III THE SOLAR SYSTEM AND BEYOND	
Introduction.....	551
 15. Origin of the Solar System—A. G. W. Cameron.....	 553
Introduction.....	553
Theories of Solar System Origin.....	555
Investigations of Interstellar Gas.....	560
Theories of Star Formation.....	562
Planetary Development.....	573
References.....	584
 16. The Sun—J. C. Lindsay, W. M. Neupert, and R. G. Stone...	 585
Introduction.....	585
Radio Emission from the Sun.....	591
Solar X-ray Emission.....	605
Extreme Ultraviolet.....	615
Variations of the EUV Spectrum with Solar Activity.....	622
The Solar Spectrum from 500 Å to 2000 Å.....	626
References.....	629
 17. The Moon—J. A. O'Keefe.....	 631
Introduction.....	631
Geometrical Facts.....	631
Morphology.....	636

Surface Properties	651
Geophysical Problems	656
Chemistry of the Moon	659
Origin of the Moon	662
References	666
 18. Planetary Atmospheres—R. Jastrow and S. I. Rasool	 669
Introduction	669
Gravitational Escape	670
Survey of Atmospheric Structure	679
Atmospheres of the Planets	686
References	698
 19. Planetary Structure—A. G. W. Cameron	 701
The Interior of the Earth	702
The Moon and Planets	719
References	728
 20. Space Astronomy—A. Boggess	 729
Introduction	729
Observational Techniques	733
Space Flight Instrumentation	735
Balloon Observations	740
Ultraviolet Spectra of Jupiter and Venus	742
Stellar Energy Distributions	744
Interstellar Scattering	751
X-ray Observations	753
Additional Research Problems	755
References	758
 21. Stellar Evolution—R. C. Cameron	 761
The New Astronomies	761
Galaxies and Star Populations	763
The Hertzsprung-Russell Diagram	769
The State of the Stellar Interior	775
Nuclear Energy	779

Energy Flux	784
Opacity	786
Stellar Luminosity	790
The Basic Equations	792
Birth of a Star	795
Lifetime of a Population I Star	802
Lifetime of a Population II Star	808
Death of a Star	813
References	820
 22. Extragalactic Radio Sources—W. Priester and J. Rosenberg	823
Introduction	823
Basic Definitions	826
Radiative Transfer	830
Radio Galaxies and Quasi-Stellar Radio Sources	834
References	861
 23. Nucleosynthesis—A. G. W. Cameron	863
Light Element Reactions	867
Helium and Carbon Burning	870
Neutrino Processes	874
Building Elements up to Iron	876
Abundance of the Elements	884
Second and Third Generation Stars	893
References	896
 Author Index	897
Subject Index	907
