

# TABLE OF CONTENTS

PREFACE	XIII
ACKNOWLEDGEMENTS	XV
CHAPTER 1. INTRODUCTION	
1.1. Basic Ideas	1
1.2. Brief History of Auroral Studies	3
1.3. Aurora and the Magnetosphere	4
CHAPTER 2. TECHNIQUES OF OBSERVATION	
2.1. Observations of Total Intensity	8
2.1.1. Visual Observations	9
2.1.2. All-Sky Camera Observations	9
2.1.3. Television and Image Intensifier Camera Systems	10
2.1.4. Ground Based, Rocket and Satellite Auroral Photometry	10
2.1.5. Height Finding Systems	11
2.2. Spectroscopic Techniques	12
2.2.1. Grating Spectrographs	12
2.2.2. Grating Spectrometers	13
2.2.3. Fabry-Perot Spectrometers	16
2.2.4. Interference Filter Photometers	18
2.2.4.1. Multiple Channel Systems	20
2.2.4.2. Use of Tilting-Filter Systems	20
2.2.4.3. Spatial Scanning Techniques	20
2.2.4.4. Wedge Interference Filters	21
2.2.4.5. High Order Interference Filter Systems	21
2.2.5. Fourier Spectroscopy	21
2.2.5.1. Field Compensated Michelsons	22
2.2.6. Birefringent Filter Photometers	23
2.3. Particle Measurements	23
2.3.1. Particle Detectors	24
2.3.2. Measurement of Particle Energy Distribution	25
2.4. Radio Reflection Techniques	27
2.4.1. Pulse Radar Systems	27

2.4.2. Continuous Wave Reflection Techniques	28
2.4.3. Ionospheric Sounders	28
2.5. Magnetic Field Measurements	29
2.5.1. Classical Methods	29
2.5.2. Fluxgate Magnetometers	29
2.5.3. Zeeman Effect Magnetometers	30
2.5.4. Rotating Coil Systems	31
2.6. Other Observing Techniques	31
2.6.1. Radio Emissions	31
2.6.2. Auroral Cosmic Noise Absorption	31
2.6.3. Electric Fields Associated with Aurora	32
2.6.4. Detection of Infrasonic Emissions from Aurora	33
2.6.5. Detection of X-Rays from Aurora	33

### CHAPTER 3. OCCURRENCE AND MORPHOLOGY

3.0. Introduction	35
3.1. Occurrence of Visible Aurora	35
3.1.1. The Auroral Zones	35
3.1.2. The Auroral Oval	35
3.1.3. Conjugacy of Aurora	38
3.1.4. Longitude Effects	39
3.2. Individual Displays – Auroral Substorms	40
3.3. Detailed Morphology of Auroral Forms	43
3.3.1. Classification of Visual Auroral Forms	43
3.3.2. Detailed Structure of Auroral Forms	44
3.3.3. Intensity Indices	45
3.3.4. Height Distribution of Normal Aurora	45
3.3.5. Visual Types of Aurora	46
3.3.6. Variations in Aurora with Geomagnetic Time and Latitude	48
3.3.7. Rapid Time Variations – Pulsing Aurora	50
3.3.7.1. Pulsating Aurora	51
3.3.7.2. Flickering Aurora	53
3.4. Proton Aurora	54
Height of Proton Aurora	55
Intensity and Intensity Fluctuations	56
Geomagnetic Time-Latitude Variation – Proton Auroral Oval	57
Proton Precipitation in Auroral Substorms	59
3.5. Relation of Aurora to Solar Events	61
3.5.1. Periodicities and Recurrences	61
3.5.2. Correlations with Solar Events	62
3.5.3. Relation of Aurora to Solar Wind and Interplanetary Magnetic Field	62

3.6. Magnetic Disturbances and Aurora	64
3.6.1. Magnetic Storms and Equivalent Current Systems	64
3.6.2. Real Current Systems in Aurora	67
3.6.3. Electric Fields in Aurora	70
3.7. Relation Between Auroral Substorms and the Magnetosphere	71
3.8. Particle Fluxes in the Auroral Oval	75

#### CHAPTER 4. OPTICAL EMISSIONS FROM AURORA

4.1. Optical Transitions and the Auroral Spectrum	80
4.1.1. The Observed Spectrum	80
4.1.2. Excitation and Ionization Cross Sections	80
Excitation Cross Sections	80
Ionization Cross Sections	87
Partial Cross Sections for Vibrational Levels	93
4.1.3. Optical Transition Probabilities	94
Atomic Lines and Multiplets	95
Electronic Band Systems	96
Rotational Fine Structure of Electronic Bands	97
4.1.4. Quenching and Energy Transfer Processes	97
4.2. Electron Aurora	97
4.2.1. Interaction of an Energetic Electron Beam with the Atmosphere	97
Semi-Empirical Method of Rees	98
Extended Fokker-Planck Method	98
Model of Stolarski and Green	99
4.2.1.1. Empirical Energy Deposition Function	99
4.2.1.2. Calculated Energy Deposition Function	101
4.2.1.3. Ionization Rate Height Profiles	102
4.2.1.4. Production Rates of Individual Ions	104
4.2.1.5. Production Rate of Secondary Electrons as Function of Energy	105
4.2.1.6. Flux of Secondary Electrons	106
4.2.1.7. Primary Electron Flux	110
4.2.1.8. Total Electron Fluxes	111
4.2.2. Excitation of Atmospheric Atoms by Primary and Secondary Electrons	111
4.2.2.1. Excitation and Ionization by Primary and Secondary Electrons	112
4.2.2.2. Excitation and Ionization by Secondary Photons	114
4.2.3. Indirect Excitation Processes and Quenching	114
4.2.3.1. Dissociative Recombination	116
4.2.3.2. Energy Transfer	116

4.2.3.3. Quenching	118
4.2.3.4. Thermal Excitation	121
4.2.3.5. Cascading	123
4.2.4. Predicted Electron Auroral Spectrum and Comparison with Observation	124
4.2.4.1. 1N $N_2^+$ Bands	125
4.2.4.2. Meinel $N_2^+$ System	125
4.2.4.3. $N_2$ Triplet and Triplet-Singlet Systems	126
4.2.4.4. $N_2$ Singlet Systems	135
4.2.4.5. $O_2$ Systems	136
4.2.4.6. $O_2^+$ Systems	138
4.2.4.7. NO $\gamma$ System	138
4.2.4.8. OH Vibration-Rotation Bands	140
4.2.4.9. [OI] Forbidden Transitions	141
Analysis of pulsing aurora	141
4.2.4.10. [NI] Forbidden Transitions	145
4.2.4.11. [OI] and [NII] Forbidden Transitions	147
4.2.4.12. OI Higher Level Transitions	147
4.2.4.13. NI Higher Level Transitions	148
4.2.4.14. OII and NII Higher Level Transitions	148
4.2.4.15. Other Atomic Lines	148
4.2.5. Variations in the Auroral Spectrum	149
4.2.5.1. Introduction	149
4.2.5.2. Simple Height Effects	150
4.2.5.3. Simple Energy Spectrum Effects	151
4.2.5.4. Complex Energy Spectrum Effects	152
4.2.5.5. Atmospheric Temperature Effects	154
4.3. Proton Aurora	162
4.3.1. Interaction of a Proton Beam with the Atmosphere	162
4.3.1.1. Ionization Equilibrium of a Proton Beam	164
4.3.1.2. Ion Production Rate	166
4.3.1.3. Secondary Electron Energy Distribution	167
4.3.2. Excitation of Hydrogen Emission Lines and Their Doppler Profiles	167
4.3.2.1. Hydrogen Line Emission	167
4.3.2.2. Ionization	169
4.3.2.3. Hydrogen Line Profiles	171
4.3.2.4. Height Profiles of Balmer Lines	173
4.3.3. Spectrum of Proton Aurora	173
4.3.3.1. Theory	173
4.3.3.2. Observed Spectrum and Comparison with Theory	174
4.3.4. Polar Cap Glow	176

## CHAPTER 5. AURORA AND THE IONOSPHERE

5.1. Auroral Ionization and Its Effects	178
5.1.1. The Ion and Electron Continuity Equation in Aurora	180
5.1.2. Ion Chemistry in the Auroral Atmosphere	182
5.1.3. Effects of Transport on Auroral Ionization	189
5.1.4. Observations of Electron Concentrations in Aurora	190
5.1.5. Comparison of Theoretical and Observed Ion Concentrations in Aurora	193
5.2. Electrical Conductivity, Electric Fields and Currents	194
5.2.1. Conductivities	194
5.2.2. Currents and Electric Fields in the Auroral Ionosphere	199
5.3. Heating Effects in Aurora	202
5.3.1. Heating of the Neutral Atmosphere by Auroral Particle Fluxes	202
5.3.2. Heating of Electrons by Auroral Particles	202
5.3.3. Heating of Ions by Auroral Particles	203
5.3.4. Heating of Ions and Electrons by Electric Fields	203
5.3.5. Heating of Neutral Particles by Electric Fields	206
5.3.6. Transport Effects in the Electron and Ion Gas	206
5.3.7. Cooling of the Electron Gas	206
5.3.8. Cooling of Ion Gas	207
5.3.9. Electron Temperatures in Aurora	207
5.3.10. Ion Temperatures in Aurora	210
5.3.11. Effects of Neutral Particle Heating in Aurora	211
5.4. Reflection of Radio Waves from the Auroral Ionosphere	212
5.4.1. Reflection Mechanisms	212
5.4.2. Fine Structure of Auroral Ionization	214
5.4.3. Comparison of Theory and Observations of Radio Aurora	218
5.5. Radio Absorption	220
5.5.1. Theory of Absorption	220
5.5.2. Application to Aurora	221
5.5.3. Results of Riometer Studies	223
5.6. X-Rays from Auroral Electrons	224
5.6.1. Theory of X-Ray Production	224
5.6.2. X-Ray Propagation	226
5.6.3. Observations of Auroral X-Rays	228
5.7. Radio Emission from Aurora	230
5.7.1. Theory	230
5.7.2. Comparison with Observations	231
5.8. Infrasonic Emission from Aurora	232
5.8.1. Observations	232
5.8.2. Theory of Propagation	232
5.8.3. Theory of Generation	233

## CHAPTER 6. MECHANISMS OF PRECIPITATION OF AURORAL PARTICLES

6.0. Introduction	234
6.1. The Steady State Magnetosphere	234
6.1.1. Shape and Structure	235
6.1.2. Convective Circulation	236
6.1.3. The Effect of the Ionosphere	238
6.1.4. The Effect of Merging on Form	239
6.1.5. Particle Entry and Energization	241
6.1.5.1. Origin of Auroral Particles	241
6.1.5.2. Adiabatic Energization	241
6.1.5.3. Neutral Sheet Energization Processes	243
6.2. Transient Effects and Substorms	243
6.2.1. Stable Transient Tail Growth	243
6.2.2. Instability in Tail Growth	245
6.2.3. Additional Acceleration Processes	248
6.2.4. Particle Trapping and Pitch Angle Scattering	249
6.2.5. Proton Precipitation	252
6.2.5.1. Plasma-Wave-Proton Interactions	252
6.2.5.2. Energization of Protons and the Ring Current	252
6.2.5.3. Other Acceleration Processes for Protons	253
6.2.6. SAR- or M-Arcs	253
6.3. Fine Structure of Auroral Precipitation	254
6.3.1. Formation of Auroral Arcs	254
6.3.2. Deformation of Auroral Arcs	255
6.3.2.1. Charge-Sheet Instability	255
6.3.2.2. The Current Sheet Instability	257
6.3.3. Temporal Structure – Pulsing Aurora	257
6.4. Conclusion	259

## APPENDICES

2A. Use of Filter Photometers for Measurement of Absolute Total Intensity of Emission Bands	260
3A. Geomagnetic Latitude and Time	263
3B. Magnetic Disturbance Indices	265
6A. Trajectories of Particles Trapped in a Dipole Field	267
