PREFACE	5
INTRODUCTION	6
CHAPTER 1. SPECTROPOLARIMETRIC MANIFESTATION OF SELF-ALIGNMENT	10
1.1 Representation of Stokes parameters by polarization moments	10
1.1.1 Classical and polarization moment formalism	11
1.1.2 Relation to the ordering of angular momenta	16
1.1.3 Stokes parameters within the detector frame of reference	21
1.2 Quadrupole ordering of angular momenta of excited atomic particles	24
1.2.1 Equation for polarization moments	24
1.2.2 Self-alignment under radiation self-absorption	27
1.2.3 Self-alignment by electron impact	30
1.2.4 Connection of Stokes parameters to the quadrupole moment	32
1.3 Electron impact alignment cross-sections	35
1.3.1 Relations to collisional spectroscopic parameters	35
1.3.2 Methods of calculation	39
CHAPTER 2: EXPERIMENTAL METHODS FOR POLARIMETRIC SPECTRAL SENSING	47
2.1 Optical polarimetry techniques	47
2.1.1 Requirements for experimental polarimetric schemes	47
2.1.2 Fourier polarimeter	49
2.1.3 Polarimeters for solar spectra studies	51
2.2 Magnetic spectropolarimetry	53
2.2.1 Polarization moments in presence of a magnetic field. Hanle effect	53
2.2.2 Stokes parameters determination	56
2.2.3 Laboratory magnetic polarization spectrometer	58

2.3	Derivation of local plasma parameters	61
2.3.1	Stokes parameters and polarization moments	61
2.3.2	Axially symmetric ionized gas entities	65
CHAPTER 3: POLARIMETRIC SENSING OF THE POSITIVE COLUMN IN A D.C. DISCHARGE		70
3.1	Experimental characteristics of noble gas self-alignment	70
3.1.1	Cascading self-alignment	70
3.1.2	Self-alignment of highly excited states	79
3.2	Electron impact self-alignment	81
3.2.1	Evidence for electron impact self-alignment	81
3.2.2	Self-alignment in a cylindrical discharge	85
3.3	Electric parameters in the positive column	86
3.3.1	Kinetics of fast electrons	86
3.3.2	Polarization profile across the discharge image	90
3.3.3	Radial electric field	97
CHAPTER 4: POLARIMETRIC SENSING OF A HIGH FREQUENCY DISCHARGE		104
4.1	Self-alignment generation	104
4.1.1	Radiation self-absorption	104
4.1.2	Electron impact	109
4.2	Plasma structural features in a capacitive discharge	110
4.2.1	Radiation polarization in the vicinity of the electrode sheath	110
4.2.2	Electron motion anisotropy near the electrode sheath	111
4.2.3	Spectropolarimetric effects in other parts of the plasma	118
4.3	Electric and energetic characteristics of a capacitive discharge	124
4.3.1	Energy transport through the electrode sheath	125
4.3.2	Amplitude of the alternative electric field in the central part	132
CHAPTER 5: POLARIZATION SPECTROSCOPY OF IONS		140
5.1	Theory of drift self-alignment	140
5.1.1	Theory	140
5.1.2	Characteristic rate constants	142
5.2	Observation of drift self-alignment in a hollow cathode	143
5.2.1	Spectropolarimetric peculiarities	143
5.2.2	Evidence for drift self-alignment	145

5.3 Drift velocity of ions	148
5.3.1 Determination of the rate constants	148
5.3.2 Remote sensing of the hollow cathode	150
CHAPTER 6: ATOMIC CONSTANTS DETERMINATION	155
6.1 Noble gases	155
6.1.1 Relaxation constants	155
6.1.2 Lifetimes and alignment-destroying collision cross-sections	157
6.1.3 Correction for self-absorption	161
6.2 Electron beam excitation	162
6.2.1 Accounting for beam magnetic field bending	163
6.2.2 Radiation self-absorption	166
6.2.3 Alignment cascading	169
CHAPTER 7: POLARIZATION SPECTROSCOPY IN ASTROPHYSICS	175
7.1 Solar magnetic field measurement	175
7.1.1 Zeeman and Hanle effects	175
7.1.2 Solar prominences magnetic field	177
7.1.3 Coronal magnetic field	181
7.2 Impact polarization in solar flares	183
7.2.1 Solar flares	183
7.2.2 Anisotropies associated with energy transport	184
7.2.3 $H\alpha$ polarization observations	185
7.2.4 Origin of the observed polarization	188
7.3 Energy transport by protons in solar flares	194
7.3.1 Expected proton velocity anisotropy	194
7.3.2 Delivered energy flux	197
7.3.3 Application of the polarization moment formalism	200
CONCLUSIONS	210
