Preface . . . . .	3
Part I. PHYSICAL CHARACTERISTICS OF CIRCUMTERRESTRIAL AND INTERPLANETARY SPACE CONDITIONS AT NEAREST CELESTIAL BODIES	
1.1. Electromagnetic radiation of sun. Activity . . . . .	5
1.2. Radiation fields of earth . . . . .	40
1.3. Radiation fields in space . . . . .	59
1.4. Corpuscular radiation . . . . .	85
1.5. Earth's magnetic field . . . . .	114
1.6. Earth's upper atmosphere . . . . .	136
1.7. Earth's ionosphere . . . . .	169
1.8. Meteoric bodies in interplanetary space . . . . .	181
1.9. General physical characteristics of Moon, Venus, and Mars . . . . .	193
Part II. EFFECTS OF EXTERNAL FACTORS ON SPACECRAFT MATERIALS AND EQUIPMENT	
2.1. Thermal regime . . . . .	224
2.2. Losses of material in vacuo . . . . .	227
2.3. Effect of meteoric particles . . . . .	243
2.4. Effect of electromagnetic radiation . . . . .	250
2.5. Effect of corpuscular radiation . . . . .	261
2.6. Effects of corpuscular radiation on photocells and semiconductors . . . . .	276
2.7. Surface charge . . . . .	289
2.8. Some specific requirements for electronic equipment, determined by radiation effects . . . . .	292
Bibliography . . . . .	297
Subject index . . . . .	307
