

# Contents

List of mathematical symbols and abbreviations .....	10
1. Introduction .....	15
2. Basic phenomenological results .....	17
2.1. Physical conditions in the undisturbed solar atmosphere and in active regions .....	17
2.1.1. Photospheric properties .....	17
2.1.2. The chromosphere .....	18
2.1.3. The corona .....	19
2.1.4. Solar active regions .....	22
2.2. Types of solar radio bursts .....	24
2.2.1. Radio bursts in the cm-region .....	25
2.2.2. Decimetre bursts .....	28
2.2.3. Drift bursts .....	28
2.2.4. Type IV bursts .....	30
2.2.4.1. Centimetre region .....	30
2.2.4.2. Decimetre range .....	31
2.2.4.3. The metre region .....	31
2.3. Solar flares .....	32
2.3.1. Flare characteristics .....	33
2.3.2. Flares with continuous emission in the optical spectral range .....	34
2.3.3. Flares and radio emission .....	34
2.4. Solar UV-, X-, and $\gamma$ -radiations .....	36
2.5. Typical tendencies of the development of solar radio bursts and summary of the main aspects of phenomenological studies .....	37
3. Theoretical foundations of the emission of radio waves in a plasma .....	39
3.1. Elementary processes of the generation of radiation .....	39
3.1.1. Single particle approximation .....	39
3.1.2. Radiations from definite volumina .....	40
3.2. Bremsstrahlung without external magnetic fields .....	41
3.2.1. The equation of radiation transfer .....	41
3.2.2. The absorption coefficient .....	43
3.2.3. Stationary thermal burst models .....	45

3.2.4. Influences of the plasma frequency .....	48
3.2.5. Preliminary interpretation of the morphological types of solar microwave bursts .....	49
<b>3.3. Bremsstrahlung in the presence of external magnetic fields .....</b>	<b>51</b>
3.3.1. Propagation of electromagnetic waves in a plasma .....	51
3.3.2. Polarization characteristics of electromagnetic waves .....	56
3.3.3. Coupling of electromagnetic wave modes in a cold plasma .....	66
3.3.4. Absorption under the influence of external magnetic fields .....	71
3.3.5. Optical depth and polarization characteristics of radio bursts .....	73
<b>3.4. Gyroemission .....</b>	<b>76</b>
3.4.1. Gyroemission as special case of magnetic bremsstrahlung (cyclotron radiation) .....	76
3.4.2. Gyro-resonance absorption .....	82
3.4.3. Radiative transfer in a magnetoactive plasma .....	86
<b>3.5. Synchrotron radiation .....</b>	<b>87</b>
3.5.1. Synchrotron radiation from electrons of medium energy .....	87
3.5.2. Synchrotron radiation from highly relativistic electrons .....	89
3.5.3. The influence of the medium on the synchrotron radiation, RAZIN effect .....	90
3.5.4. Polarization characteristics and synchrotron reabsorption .....	93
3.5.5. Negative reabsorption and coherent synchrotron emission .....	94
<b>3.6. ČERENKOV radiation .....</b>	<b>95</b>
3.6.1. Coherent electromagnetic waves .....	95
3.6.2. Plasma waves and $L-T$ interactions .....	96
<b>3.7. Acceleration mechanisms and particle energy spectrum .....</b>	<b>99</b>
3.7.1. Basic problems of the origin of flares and bursts .....	99
3.7.2. Direct electric field acceleration, discharge theory .....	102
3.7.3. The FERMI-PARKER mechanism .....	103
3.7.4. Other electromagnetic acceleration mechanisms .....	104
3.7.5. Direct transformation of magnetic into kinetic energy .....	105
3.7.6. Production of energetic particles by nuclear reactions .....	106
<b>3.8. Relations between the particle energy spectrum and the emitted radiation ..</b>	<b>108</b>
3.8.1. Stationary conditions .....	108
3.8.2. Temporal changes of the energy distribution and the emitted spectrum ..	109
<b>4. The interpretation of radio bursts .....</b>	<b>112</b>
<b>4.1. Storage and release of energy in connection with radio burst phenomena ..</b>	<b>112</b>
4.1.1. Processes of energy storage .....	112
4.1.2. Estimations of the magnetic field strength from radio observations ..	113
4.1.3. The $S$ -component as an indicator for the storage of kinetic and magnetic energy .....	116

4.2. The time characteristics of solar radio bursts . . . . .	119
4.2.1. Basic factors determining the burst morphology . . . . .	119
4.2.2. Quasi-stationary processes — gradual bursts . . . . .	120
4.2.3. Impulsive processes and the decreasing phase of the burst emission . . . . .	120
4.2.4. Burst groups and the phenomenon of homologous bursts . . . . .	122
4.3. The burst spectrum . . . . .	123
4.3.1. Monotonic spectra . . . . .	123
4.3.2. Cut-off and cross-over frequencies . . . . .	124
4.3.3. Relation between frequency extent and position of the spectral maximum for synchrotron radiation . . . . .	125
4.4. Theoretical aspects of the type IV bursts . . . . .	127
4.4.1. Type IV $\mu$ -bursts . . . . .	127
4.4.2. Type IV dm bursts . . . . .	128
4.4.3. “Moving” and “quasi-stationary” type IV bursts in the metre region	130
4.4.4. Stationary type IV bursts and continuum storms . . . . .	131
4.5. Proton flares . . . . .	133
4.5.1. Proton flares and type IV bursts . . . . .	133
4.5.2. Results of the Proton Flare Project . . . . .	134
4.6. Models of the development of compound bursts . . . . .	134
4.6.1. Analysis of the typical phases of a compound burst event . . . . .	134
4.6.2. On the origin of the radio emission of different spectral regions . . . . .	138
4.6.3. On the estimation of plasma parameters in characteristic burst emitting regions . . . . .	140
4.6.4. The energy exchange for different phases and spectral ranges of the flare- burst phenomenon . . . . .	141
4.7. Problems of the forecasts of solar flares and bursts . . . . .	145
5. Summary and conclusions . . . . .	148
Bibliography . . . . .	150
Appendix 1 . . . . .	163
Appendix 2 . . . . .	179
Index . . . . .	201
