

# CONTENTS

1. INTRODUCTION	1
1.1. Dust in time	1
1.2. An edifice of dust	2
1.2.1. Early excavations	2
1.2.2. The foundations	3
1.2.3. The framework	4
1.2.4. Recent additions and alterations	5
Further reading	6
2. TRANSMISSION OF RADIATION	8
2.1. The equation of transfer	8
2.1.1. Extinction and phase retardation	8
2.1.2. Polarization properties	9
2.1.3. Uniform-slab models	12
2.2. Cross-sections for single particles	14
2.2.1. Differential equation formulation	15
2.2.2. Integral equation formulation	16
2.2.3. The discrete dipole array	18
2.2.4. Laboratory measurements	18
2.3. Approximation formulae	19
2.3.1. The long-wavelength limit	20
2.3.2. Anomalous diffraction	21
2.3.3. Rayleigh-Gans scattering	25
2.4. Some characteristics of complex cross-sections	25
2.4.1. Spheres and extinction	25
2.4.2. Spheroids, infinite cylinders, and polarization	28
Further reading	34
3. INTERSTELLAR EXTINCTION AND POLARIZATION	36
3.1. Extinction	36
3.1.1. Observations of extinction	36
3.1.2. Interpretation of the extinction curve	38
3.1.3. Extinction at X-ray wavelengths	41
3.2. Linear polarization	43
3.2.1. Observations of linear polarization	43
3.2.2. Interpretation of linear polarization	45

3.2.3. Linear polarization as a tracer of the Galactic magnetic field	48
3.3. Circular polarization	52
Further reading	56
4. SCATTERING OF RADIATION	57
4.1. Scattering of polarized radiation	57
4.2. Calculations for single particles	59
4.2.1. Differential equation formulation	59
4.2.2. Alternative methods	60
4.3. Input for radiative transfer	61
4.4. Approximation formulae	65
4.4.1. The long-wavelength limit	65
4.4.2. X-ray haloes	67
4.4.3. Asymptotic values for large spheres	69
4.5. Polarization of scattered light	70
Further reading	74
5. REFLECTION NEBULAE	75
5.1. Types of reflection nebulosity	75
5.2. Conceptual modelling of reflection nebulae	80
5.3. Optical and ultraviolet observations	84
Further reading	92
6. ABSORPTION AND THERMAL EMISSION OF RADIATION	93
6.1. Absorption cross-sections and emissivity	93
6.2. Temperature of the dust	95
Further reading	99
7. INTERSTELLAR AND CIRCUMSTELLAR THERMAL EMISSION	100
7.1. Far-infrared emission from the Galactic plane	100
7.2. Circumstellar dust	102
7.2.1. Stars with infrared excesses	102
7.2.2. Some properties of model circumstellar envelopes	107
Further reading	116

8.	INTERACTIONS IN AN INTERSTELLAR ENVIRONMENT	118
8.1.	Phenomena on grain surfaces	118
8.2.	Time constants of grain motion	133
8.3.	Radiation pressure	136
8.4.	Grain alignment	140
	Further reading	147
9.	DUST IN OUR GALAXY	149
9.1.	The large-scale distribution	149
9.2.	The concept of dust clouds	152
9.3.	Dark clouds	159
9.4.	Dust associated with H II regions	171
9.5.	Interstellar dust in the solar system	182
	Further reading	188
10.	CHEMICAL COMPOSITION	192
10.1.	Cosmic abundances	192
10.1.1.	A boundary condition	192
10.1.2.	Depletion of elements in the gas phase	194
10.2.	Spectral features	196
10.2.1.	The ultraviolet extinction bump at 2200 Å	196
10.2.2.	The 10- $\mu$ emission/absorption feature of silicate	199
10.2.3.	Absorption at the 3.1- $\mu$ ice band	204
10.2.4.	The 11.5- $\mu$ SiC emission feature	206
10.2.5.	Unidentified emission features	207
10.2.6.	Diffuse interstellar bands	208
10.3.	Constraints from continuum measurements	211
10.3.1.	Extinction and polarization	211
10.3.2.	Scattered light	216
10.3.3.	Thermal emission	220
	Further reading	220
11.	EVOLUTION OF DUST GRAINS	223
11.1.	Formation of refractory grains	224
11.1.1.	Homogeneous nucleation	224
11.1.2.	Equilibrium condensation	227
11.1.3.	Surface nucleation	232
11.2.	Accretion of volatile elements	235

11.3. Agents of destruction	236
11.3.1. Collisional effects	236
11.3.2. Regions of star formation	239
11.4. A steady state?	240
Further reading	243
12. EXTRAGALACTIC AND INTERGALACTIC DUST	245
12.1. Extragalactic dust: an overview	245
12.2. On the importance of extragalactic dust	248
12.2.1. Polarization in the Local Group	248
12.2.2. Dust as a tracer of spiral structure	249
12.2.3. A dusty Seyfert nucleus	251
12.2.4. The polarized halo of M 82	252
12.3. Intergalactic dust	255
Further reading	258
INDEX	261
