TABLE OF CONTENTS

PREFA	CE	IX
СНАРТ	ER 1/INTRODUCTION	1
СНАРТ	ER 2/DESCRIPTION OF SID TECHNIQUES AND	
	OBSERVATIONS	8
2.1.	The Sudden Enhancement of Atmospherics (SEAs)	9
2.2.	* ` '	
	Anomalies (SFA)	13
2.3.	· · · ·	22
2.4		27
2.5.	Sudden Cosmic Noise Absorption (SCNA)	29
2.6.	Sudden Increase of f_{\min} (SIF)	36
2.7	Flare Effects Observed with Pulsed Transmitters	37
2.8	Sudden Frequency Deviations	37
2.9	Wave Interaction Technique	40
2.10	D. Partial Reflection Observations	43
2.1	1. Satellite Radio Beacon Experiment – Changes in Total Electron	
	Content (SITEC)	47
2.12	2. Incoherent-Scatter Technique	53
2.13	3. Rocket Soundings	58
2.14	4. A Comparative Evaluation of Electron Density Profile Errors	59
СНАРТ	ER 3/FLARE RADIATIONS RESPONSIBLE FOR	
	IONOSPHERIC EFFECTS	60
3.1.	Quiet-Day Solar Flux in the EUV and X-Ray Regions	60
3.2.	Flaretime Enhancements in XUV Fluxes	64
3.3.	X-Ray Spectral Development	69
	3.3.1. The Equivalent Spectrum	74
	3.3.2. The Composite Spectrum	74
	3.3.3. Spectral Development Based on Free-Free (Bremsstrahlung)	
	and Radiative Recombination Transitions	80
3.4.	Photoelectrons During Flares	83
СНАРТ	ER 4/SID PHENOMENOLOGY	86
4.1.	Occurrence of SIDs with X-Ray, EUV Flares and Microwave Bursts	86

	4.1.1. D-Region SIDs and X-Ray Fluxes and Microwave Bursts	86
	4.1.2. F-Region SIDs and EUV Flux	90
4.2.	Threshold X-Ray Flux for the Production of an SID	92
4.3.	Level of Solar Radio Flux in the 3000 MHz Region and Its	
	Relation to the Occurrence of Sudden Ionospheric Disturbances	93
4.4.	The Size Correlation	95
4.5.	Time of Growth and Relaxation Time	98
	4.5.1. SEA Types and Cosmic Rays	100
4.6.	SDA Characteristics and Implications	100
4.7.	<u> </u>	
	Radio Noise Bursts and SID Effects	101
СНАРТЕ	ER 5/SOME SIMPLE ANALYSIS TECHNIQUES	108
5.1.	Photoionization Rates and Equations of Continuity	108
5.2.	Use of Relaxation Time	112
5.3.	Decay Curve Analysis	115
	5.3.1. Principle of the Decay Curve Analysis	115
	5.3.2. Decay Curves Analysis for Absorption Events	116
	5.3.3. Decay Curves of SPAs	117
	5.3.4. Decay Curves of Magnetic Crochets	119
5.4.	Simultaneous Correlation of $\Delta \phi$ and ΔA	120
5.5.	Zenith Angle Dependence of SIDs	123
СНАРТЕ	ER 6/SOME OUTSTANDING SOLAR FLARE EVENTS	126
6.1.	Ionospheric Effects of the Flare of July 7, 1966	129
6.2.	Ionospheric Effects of the Solar Flares of May, 1967	135
6.3.	Ionospheric Effects of the Solar Flare of July 8, 1968	140
6.4.	Ionospheric Effects of August 1972 Flare Events	143
СНАРТЕ	ER 7/DEVELOPMENT OF ELECTRON DENSITY PROFILES	
	FROM SYNOPTIC SIDs	147
7.1.	Profiles from SCNA Measurements	147
7.2.	Profile Determination from Simultaneous Use of SCNA	
	and SPA Measurements	150
7.3.	Profiles from Phase and Amplitude Measurements at VLF	151
СНАРТЕ	R 8/D-REGION IONIZATION PROFILES AND LOSS RATES	
	DURING FLARES	156
8.1.	Flare Ionization Profiles	156
8.2.	Loss Rate During Flares	159
	8.2.1. From Quantitative Relationship of Flare X-Rays to SIDs 8.2.2. Average Profiles for Weak, Moderate and Strong Flare	159
	Conditions	169

CHAPTER 9 / SIDs AS A TOOL FOR THE STUDY OF AERONOMY AND ION CHEMISTRY 170 9.1. Photoionization Rates During Solar Flares 170 9.2. Minor Neutral Constituents in the Mesosphere 173 9.2.1. Nitric Oxide in Mesosphere 173 9.2.2. Ozone in Mesosphere 176 9.2.3. Water Vapour and Other Hydrogen Compounds 176 9.3. Ion Composition 178 9.3.1. Ion Composition in the D-Region 178 9.3.2. Ion Composition in E- and F-Regions 180 9.3.3. In Mportant Reaction Rates 185 9.3.3.1. Important Reaction Rates 185 9.3.3.2. Positive Ion Schemes 189 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 189 9.5. Chemistry of D-Region During Flares 193 9.5.1. Chemistry at 80 km 193 9.5.2. Negative Ion Regions (70 km and below) 199 9.5.3. Models of Flaretime Ionization Profiles 204 9.6. F-Region During Flares 207 9.6.1. Ionization Changes 207 9.6.2. Effective Loss Rate 217 CHAPTER 10/SIDs AS FLARE RADIATION M		TABLE OF CONTENTS	VII
AND ION CHEMISTRY 9.1. Photoionization Rates During Solar Flares 9.2. Minor Neutral Constituents in the Mesosphere 9.2.1. Nitric Oxide in Mesosphere 9.2.2. Ozone in Mesosphere 9.2.3. Water Vapour and Other Hydrogen Compounds 176 9.3. Ion Composition 9.3.1. Ion Composition in the D-Region 9.3.2. Ion Composition in E- and F-Regions 9.3.3. Ion Chemistry 9.3.3. Important Reaction Rates 9.3.3.1. Important Reaction Rates 9.3.3.2. Positive Ion Schemes 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 9.5. Chemistry of D-Region During Flares 9.5.1. Chemistry at 80 km 9.5.2. Negative Ion Regions (70 km and below) 9.5.3. Models of Flaretime Ionization Profiles 204 9.6. F-Region During Flares 9.6.1. Ionization Changes 9.6.2. Effective Loss Rate 217 CHAPTER 10/SIDs AS FLARE RADIATION MONITORING TECHNIQUES 10.1.1. VLF Observations 10.1.2. HF Absorption Phenomena Including SCNA Observations 10.2.1. EUV from Ionograms During Flares 10.2.2. SFDs as Ultraviolet Monitor 10.2.3. XUV Flux Determinations from Incoherent Scatter Observations 10.2.4. Combined EUV Information from F-Region SIDs 10.2.5. SFDs as Ultraviolet Monitor 10.2.6. Chapter 11/POLAR CAP ABSORPTION EVENTS 211.1. Radio Measurement Techniques 11.1.1. Use of Riometers 11.1.2. Use of Ionosondes 11.1.3. Partial Reflections 11.1.4. LF and VLF Observation 225 11.1.5. Oblique HF Propagation	СНАРТЕ	R 9/SIDs AS A TOOL FOR THE STUDY OF AERONOMY	
9.2. Minor Neutral Constituents in the Mesosphere 9.2.1. Nitric Oxide in Mesosphere 9.2.2. Ozone in Mesosphere 9.2.3. Water Vapour and Other Hydrogen Compounds 176 9.3. Ion Composition 9.3.1. Ion Composition in the D-Region 9.3.2. Ion Composition in E- and F-Regions 9.3.3. Ion Chemistry 181 9.3.3.1. Important Reaction Rates 9.3.3.1. Important Reaction Rates 9.3.3.1. Important Reaction Rates 9.3.3.1. Positive Ion Schemes 189 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 193 9.5. Chemistry of D-Region During Flares 193 9.5.1. Chemistry at 80 km 193 9.5.2. Negative Ion Regions (70 km and below) 199 9.5.3. Models of Flaretime Ionization Profiles 204 9.6. F-Region During Flares 207 9.6.1. Ionization Changes 9.6.2. Effective Loss Rate 217 CHAPTER 10/SIDs AS FLARE RADIATION MONITORING TECHNIQUES 10.1.1. VLF Observations 10.1.2. HF Absorption Phenomena Including SCNA Observations 10.1.2. HF Absorption Phenomena Including SCNA Observations 218 10.2.1. EUV from Ionograms During Flares 220 10.2.2. SFDs as Ultraviolet Monitor 221 10.2.3. XUV Flux Determinations from Incoherent Scatter Observations 10.2.4. Combined EUV Information from F-Region SIDs 250 CHAPTER 11/POLAR CAP ABSORPTION EVENTS 251 11.1. Radio Measurement Techniques 11.1.1. Use of Riometers 11.1.2. Use of Ionosondes 11.1.3. Partial Reflections 11.1.4. LF and VLF Observation 257 11.1.5. Oblique HF Propagation 258		·	170
9.2. Minor Neutral Constituents in the Mesosphere 173 9.2.1. Nitric Oxide in Mesosphere 173 9.2.2. Ozone in Mesosphere 176 9.2.3. Water Vapour and Other Hydrogen Compounds 176 9.3. Ion Composition 178 9.3.1. Ion Composition in the D-Region 178 9.3.2. Ion Composition in E- and F-Regions 180 9.3.3. In Important Reaction Rates 185 9.3.3.1. Important Reaction Rates 185 9.3.3.2. Positive Ion Schemes 189 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 189 9.5. Chemistry of D-Region During Flares 193 9.5.1. Chemistry at 80 km 193 9.5.2. Negative Ion Regions (70 km and below) 199 9.5.3. Models of Flaretime Ionization Profiles 204 9.6. F-Region During Flares 207 9.6.1. Ionization Changes 207 9.6.2. Effective Loss Rate 217 CHAPTER 10 / SIDs AS FLARE RADIATION MONITORING TECHNIQUES 10.1.1. VLF Observations 218 10.1.2. HF Absorption Phenomena Including SCNA Observations 218 10.2.1. EUV from Ionograms During Flares	9.1.	Photoionization Rates During Solar Flares	170
9.2.1. Nitric Oxide in Mesosphere 173 9.2.2. Ozone in Mesosphere 176 9.2.3. Water Vapour and Other Hydrogen Compounds 176 9.3. Ion Composition 178 9.3.1. Ion Composition in the D-Region 178 9.3.2. Ion Composition in E- and F-Regions 180 9.3.3. In Chemistry 181 9.3.3.1. Important Reaction Rates 185 9.3.3.2. Positive Ion Schemes 189 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 189 9.5. Chemistry of D-Region During Flares 193 9.5.1. Chemistry at 80 km 193 9.5.2. Negative Ion Regions (70 km and below) 199 9.5.3. Models of Flaretime Ionization Profiles 204 9.6. F-Region During Flares 207 9.6.1. Ionization Changes 207 9.6.2. Effective Loss Rate 217 CHAPTER 10 / SIDs AS FLARE RADIATION MONITORING TECHNIQUES 10.1.1. VLF Observations 218 10.2.1. EUV from Ionograms During Flares 230 10.2.2. SFDs as Ultraviolet Monitor 232 10.2.3. XUV Flux Dete	9.2.	· ·	173
9.2.3. Water Vapour and Other Hydrogen Compounds 176 9.3. Ion Composition 178 9.3.1. Ion Composition in the D-Region 178 9.3.2. Ion Composition in E- and F-Regions 180 9.3.3. Ion Chemistry 181 9.3.3.1. Important Reaction Rates 185 9.3.3.2. Positive Ion Schemes 189 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 189 9.5. Chemistry of D-Region During Flares 193 9.5.1. Chemistry at 80 km 193 9.5.2. Negative Ion Regions (70 km and below) 199 9.5.3. Models of Flaretime Ionization Profiles 204 9.6. F-Region During Flares 207 9.6.1. Ionization Changes 207 9.6.2. Effective Loss Rate 217 CHAPTER 10 / SIDs AS FLARE RADIATION MONITORING TECHNIQUES 10.1. Information on the X-Ray Region 218 10.1.1. VLF Observations 218 10.2.1. Fly Absorption Phenomena Including SCNA Observations 224 10.2.2. SFDs as Ultraviolet Monitor 232 10.2.3. XUV Flux Determinations from Incoherent Scatter Observations			173
9.3. Ion Composition 178 9.3.1. Ion Composition in the <i>D</i> -Region 178 9.3.2. Ion Composition in <i>E</i> - and <i>F</i> -Regions 180 9.3.3. Ion Chemistry 181 9.3.3.1. Important Reaction Rates 9.3.3.2. Positive Ion Schemes 189 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 193 9.5. Chemistry of <i>D</i> -Region During Flares 193 9.5.1. Chemistry at 80 km 193 9.5.2. Negative Ion Regions (70 km and below) 199 9.5.3. Models of Flaretime Ionization Profiles 204 9.6. <i>F</i> -Region During Flares 207 9.6.1. Ionization Changes 207 9.6.2. Effective Loss Rate 217 CHAPTER 10/SIDs AS FLARE RADIATION MONITORING TECHNIQUES 218 10.1.1. VLF Observations 218 10.1.2. HF Absorption Phenomena Including SCNA Observations 218 10.2.1. EUV from Ionograms During Flares 230 10.2.2. SFDs as Ultraviolet Monitor 222 10.2.3. XUV Flux Determinations from Incoherent Scatter Observations 202. 232 10.2.4. Combined EUV Information from <i>F</i> -Region SIDs 250 CHAPTER 11/POLAR CAP ABSORPTION EVENTS 252 11.1. Radio Measurement Techniques 253 11.1.1. Use of Riometers 254 11.1.2. Use of Ionosondes 256 11.1.3. Partial Reflections 257 11.1.4. LF and VLF Observation 257 11.1.5. Oblique HF Propagation 258		9.2.2. Ozone in Mesosphere	176
9.3.1. Ion Composition in the <i>D</i> -Region 9.3.2. Ion Composition in <i>E</i> - and <i>F</i> -Regions 9.3.3. Ion Chemistry 9.3.3. Important Reaction Rates 9.3.3.2. Positive Ion Schemes 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 9.5. Chemistry of <i>D</i> -Region During Flares 9.5.1. Chemistry at 80 km 9.5.2. Negative Ion Regions (70 km and below) 9.5.3. Models of Flaretime Ionization Profiles 9.6. <i>F</i> -Region During Flares 9.6.1. Ionization Changes 9.6.2. Effective Loss Rate CHAPTER 10 / SIDs AS FLARE RADIATION MONITORING TECHNIQUES 10.1. Information on the X-Ray Region 10.1.1. VLF Observations 10.2.1. FLY Observations 10.2.2. SFDs as Ultraviolet Monitor 10.2.3. XUV Flux Determinations from Incoherent Scatter Observations 10.2.4. Combined EUV Information from <i>F</i> -Region SIDs 10.2.5. Chapter 11 / POLAR CAP ABSORPTION EVENTS 252 11.1.1. Use of Riometers 253 11.1.1. Use of Ionosondes 11.1.3. Partial Reflections 254 11.1.4. LF and VLF Observation 257 11.1.5. Oblique HF Propagation 258		9.2.3. Water Vapour and Other Hydrogen Compounds	176
9.3.2. Ion Composition in <i>E</i> - and <i>F</i> -Regions 9.3.3. Ion Chemistry 9.3.3.1. Important Reaction Rates 9.3.3.2. Positive Ion Schemes 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 9.5. Chemistry of <i>D</i> -Region During Flares 9.5.1. Chemistry at 80 km 9.5.2. Negative Ion Regions (70 km and below) 9.5.3. Models of Flaretime Ionization Profiles 9.6.1. Ionization Changes 9.6.2. Effective Loss Rate 207 9.6.1. Ionization Changes 9.6.2. Effective Loss Rate 217 CHAPTER 10 / SIDs AS FLARE RADIATION MONITORING TECHNIQUES 10.1.1. VLF Observations 10.1.2. HF Absorption Phenomena Including SCNA Observations 10.2.1. EUV from Ionograms During Flares 10.2.2. SFDs as Ultraviolet Monitor 224 10.2.3. XUV Flux Determinations from Incoherent Scatter Observations 10.2.4. Combined EUV Information from <i>F</i> -Region SIDs 250 CHAPTER 11 / POLAR CAP ABSORPTION EVENTS 251 11.1. Radio Measurement Techniques 11.1.1. Use of Ionosondes 11.1.1. Use of Ionosondes 11.1.1. Use of Ionosondes 11.1.1. Partial Reflections 11.1.1. Oslique HF Propagation 258	9.3.	Ion Composition	178
9.3.3. Ion Chemistry 9.3.3.1. Important Reaction Rates 9.3.3.1. Important Reaction Rates 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 9.5. Chemistry of D-Region During Flares 9.5.1. Chemistry at 80 km 9.5.2. Negative Ion Regions (70 km and below) 9.5.3. Models of Flaretime Ionization Profiles 9.6. F-Region During Flares 9.6.1. Ionization Changes 9.6.2. Effective Loss Rate 207 9.6.2. Effective Loss Rate 217 CHAPTER 10 / SIDs AS FLARE RADIATION MONITORING TECHNIQUES 10.1. Information on the X-Ray Region 10.1.1. VLF Observations 10.1.2. HF Absorption Phenomena Including SCNA Observations 10.2.1. EUV from Ionograms During Flares 203 10.2.2. SFDs as Ultraviolet Monitor 10.2.3. XUV Flux Determinations from Incoherent Scatter Observations 10.2.4. Combined EUV Information from F-Region SIDs 224 10.2.4. Combined EUV Information from F-Region SIDs 255 11.1.1. Use of Riometers 11.1.2. Use of Ionosondes 11.1.3. Partial Reflections 257 11.1.4. LF and VLF Observation 257 11.1.5. Oblique HF Propagation 258		•	
9.3.3.1. Important Reaction Rates 9.3.3.2. Positive Ion Schemes 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 9.5. Chemistry of D-Region During Flares 9.5.1. Chemistry at 80 km 9.5.2. Negative Ion Regions (70 km and below) 9.5.3. Models of Flaretime Ionization Profiles 9.6. F-Region During Flares 9.6.1. Ionization Changes 9.6.2. Effective Loss Rate CHAPTER 10 / SIDs AS FLARE RADIATION MONITORING TECHNIQUES 10.1. Information on the X-Ray Region 10.1.1. VLF Observations 10.1.2. HF Absorption Phenomena Including SCNA Observations 10.1.2. Information on EUV Flux from F-Region SIDs 10.2.1. EUV from Ionograms During Flares 10.2.2. SFDs as Ultraviolet Monitor 10.2.3. XUV Flux Determinations from Incoherent Scatter Observations 10.2.4. Combined EUV Information from F-Region SIDs CHAPTER 11 / POLAR CAP ABSORPTION EVENTS 252 11.1. Radio Measurement Techniques 11.1.1. Use of Riometers 11.1.2. Use of Ionosondes 11.1.3. Partial Reflections 11.1.4. LF and VLF Observation 257 11.1.5. Oblique HF Propagation 258		^	
9.3.3.2. Positive Ion Schemes 189 9.4. Information on Nitric Oxide from Simultaneous Measurements of Electron Density and Solar X-Rays During Flares 189 9.5. TABLE OF CONTENTS

11.2. PCA Morphology	259
11.2.1. Classification of PCA Events	259
11.2.2. Microwave-Millimeter Wave Solar Radio Bursts and Proton	
Flux	260
11.2.3. Twilight Effect	260
11.2.4. Solar Cycle Variations in the PCAs	261
11.3. November 1969 PCA Events	262
11.4. Principal Aeronomic Features of the Lower Ionosphere During	
a Major PCA	265
11.5. Chemistry of the Lower Ionosphere During PCAs	273
